Steady dollar helps European bonds and stocks

By George Graham in Washington and Philip Coggan Traders warn currency's downward trend not yet reversed

The US Administration's defiant response to the dollar's renewed

plunge earlier this week appeared to be paying off yester-day as the currency beld steady. But traders warned that the foreign exchange markets remained extremely nervous and suggested that the Administration had not yet reversed the gen-eral trend of the dollar's decline. In London, the dollar closed slightly higher against both the yen and D-Mark at Y101.15 and DM1.6035 respectively, from Y100.695 and DM1.6006 on Wednesday, Rumours of co-ordinated central bank intervention punctuated the day, but were not translated into action "The dollar is sitting just

slightly above the level where intervention might be expected" said Mr Michael Saumders, economist at Salomon Brothers.

The steadiness of the US currency helped most European bond and stock markets,

although bonds and shares traded lower in New York in the summit meeting, which opens in Naples in two weeks' time. early afternoon. The US benchmark 30-year bond was down a Japan has been the most out-

quarter of a point yielding 7.409 per cent, while the Dow Jones Industrial Average was 6.34 points lower at 3,718.43.
Foreign exchange dealers

appeared yesterday to have stayed largely on the sidelines for fear of concerted intervention by the central banks of the Group of Seven leading industrial nations.

That could change if signs of disagreement emerged among the G7 partners in the run-up to their

spoken in voicing its concern over the dollar's fall, which damages its export prospects at a time when the country's econ-omy is slowly recovering. But officials from continental Europe have also expressed increasing irritation at currency instability.

fall, and its knock-on effects on long-term interest rates, could choke off their own recoveries. Administration officials yesterday reiterated President Bill Clin-ton's upbeat assessment of the

US economy on Wednesday in

They too fear that the dollar's

which he urged investors to pay more attention to fundamentals. Mr Leon Panetta, the White House budget director, tried to reassure the debt markets by promising that the US budget deficit had turned a corner, and could fall as low as \$225bn in the current fiscal year, far below the original estimate of \$301bn. But the financial markets

appear already to be anticipating an even lower deficit than this, so Mr Panetta's good news had little effect. Government bond markets

were strong in Europe with the year German bunds rising by around half a point and to year gilts up by around he of a point. The German and French equity

markets each rose by more than 1 per cent, following a 2.2 per cent increase in Tokyo's Nikkei 225 index earlier in the day. The main exception was London. where the FT-SE 100 index fell 0.6 per cent.

Dursble goods orders up, Page 5; Rising yen: it was not always thus, Page 6; Summons to action. Page 15; Bonds. Page 21; Currencies, Page 42; London shares. Page 35: World stock markets.

Germany will call another summit next month if deadlock remains

EU leaders pressed to pick Delors successor

By David Gardner in Corfu

European Union leaders were under pressure last night to set-tle at their Greek summit the divisive issue of who should replace Mr Jacques Delors as Editorial Comment __Page 15
European Commission president, Observer ______Page 15 The 12 heads of government arrived in Corfu last night for the two-day summit, where chances of breaking the deadlock are gen-erally believed to be, at best,

Mr Jean-Luc Dehaene, prime minister of Belgium, appeared to retain a clear lead over his main rival, Mr Rund Lubbers, the out-going Dutch prime minister. But the UK and Italy have still not signalled an intention to back

either of them. Chancellor Helmut Kohl warned on Wednesday that the German EU presidency would call another summit next month if the 12 failed to agree on a successor to Mr Delors during their time in Corfu.

Mr Andreas Papandreou, the Greek prime minister, tried to be positive by suggesting that "we'll do everything we can" to reach agreement: "I want to be optimis-tic. I think we will succeed."

Mr John Major, the British prime minister, formally backs Sir Leon Brittan, the EU trade commissioner, as an outside contender, but the UK prefers Mr

Socialist candidate for the French

Kodak to sell drugs subsidiary to Sanofi for \$1.68bn

By John Ridding in Paris

Sanofl. tbe pharmaceuticals and cosmetics group, yesterday announced that it is to buy the prescription drugs business of Sterling Winthrop, a subsidiary of Eastman Kodak of the US, for \$1.68bn. As part of the deal, Sanofi will sell its minority stake in Sterling Health Europe, which sells over-the-counter

products, back to Kodak. Mr Jean-Francois Dehecq. chairman of Sanoli, which is a subsidiary of Elf-Aquitaine, the recently privatised French oil group, described the move as a major strategic decision which would substantially strengthen the company's presence in the pharmaceuticals industry.

He said the acquisition would be financed by the sale of the one of the group's principal business areas with annual sales of about FFr7bn (\$1.25bn).

Mr Dehecq said the price paid for the acquisition represented a multiple of 1.4 times the sales of the businesses acquired, which was lower than other recent big acquisitions in the pharmaceuti-

cals industry. Sanofi's earnings per share will increase by between 10 and 15

per cent next year as a result

LONDON - PARIS - FRANKFURT - NEW YORK - TOKYO

EU leaders at mercy of hijacked agenda

The European summit which opens today on the Greek island of Corfu will produce stunning scenery and snapshots for the photo-alhum.

President Boris Yeltsin of Russia has made a flying visit. The prime ministers of Austria. Sweden, Finland, and Norway will officially sign their accession treaties to the European Union. Prime Minister Silvio Berlusconi of Italy makes his first appearance at his rightist coalition. Forza Italia, swept to power.

Mr Berlusconi is a new leader with some questionable political allies in search of respectability which the EU family offers.

The Alpine and Nordic leaders are on the brink of entry members, though only Austria has passed the popular test of a referendum on membership. with the Twelve last night, will today sign a new "partnership" accord. Viewed alongside Moscow's agreement this week to join Nato's Partnership for Peace, the EU pact suggests that Russia is starting to find its place in a wider Europe after the collapse of the former Soviet Union.

The question is whether the Corfu summit will produce much more than a few snapshots and a siesta for the ailing Greek prime minister, Mr Andreas Papandreou. At first sight, the omens do not look

To their dismay, EU leaders have allowed the two-day meeting to be hijacked by the struggle over the successor to Mr the European Commission. Efforts to cool tempers have met with limited success; but there is still no sign of Mr Jean-Luc Dehaene, the Belgian Rund Lubbers, the Dutch

Disquiet over island facelift

From the gleaming salmon-pink paint on Corfu's crumbling seafront mansions to roads unusually free of potholes for a Greek island, it is clear that an expensive facelift has been carried out in preparation for staging this week-

end's European Union summit. The government says it has spent Dr14bn (£36.8m) on the Corfu summit, though local officials say the hill is likely to

The scale of government spending for the summit in Corfu, which receives Dr2bn a year in EU structural funds, has been criticised by left-wing Greek politicians and some EU diplomats, who argue it is too much, given Greece's position as the union's poorest member

of EU dishursements in the

shorter than usual, with only one formal working session of

ing official working hours is

him to rest frequently.

The Drl.9bn being spent on renovating the 19th-century palace of St Michael & St George, formerly home to the Greek Royal Family, includes Dr160m for a temporary struc-

heart problem that requires

ture to serve as the meeting from the 12 EU countries and the four new member states. Because the council chamber, constructed of metal and hullet-proof glass with a dra-

matic view across the Corfu strait to Albania, was built over the palace's main courtyard, it is due to be removed the day after the summit. "The courtyard was the only

space in the building big enough for a European council meeting, complete with interhas to come down immediately afterwards," said Mr Konstantinos Kouvaras, managing director of Avax, the Greek construction company responsible for the turnkey project.
It is some consolation that

the German government, which takes over the EU presidency from Greece on July 1, has offered to buy the oval con-ference table and chairs specially made for the meeting, he

The other main renovation project is the international press centre, a Dr3bn conversion of an 18th century fortress designed for a garrison considerably smaller than the 3,000strong contingent of journalists covering the event.

Afterwards, the building will become Corfu's conference

Tietmeyer defends monetary policies

Germany's monetary policies cannot be hlamed for the recent turbulence in interna-tional capital markets, Mr Hans Tietmeyer, president of the Bundesbank, said yester-

Speaking at the end of the regular fortnightly meeting of the Bundesbank's central council, held once a year in eastern Germany, Mr Tiet-meyer also confirmed that German interest rates would remain unchanged. The dis-count rate and the Lombard rate were last reduced on May 11 to 4.5 per cent and 6.00 per

cent respectively. His statement coincided with warnings by both Ger-many's industrial federation. the RDL and the federation of German banks, that the present economic recovery is still extremely hesitant.

The banks also warned that the flight of foreign investors from the German bond market in recent months, compounded by the high level of public sec-tor borrowing, would maintain interest rates. The country was now far more dependent than it used to be on foreign capital inflows, the comp cial banks said. Rising capital market interest rates were inevitable, to maintain the flow of funds to finance the

Mr Tietmeyer said it was the Bundesbank's role to provide a stable background for finan-cial transactions. "Market players must make their own decisions about how to react to developments," adding that volatility in the bond markets appeared to have calmed in recent days.

On the money supply question, Mr Otmar Issing, Bundes bank chief economist, described recent M3 data as "better but still not good enough." The Bundesbank would undertake its routine mid-year review of money supply policy and will decide at the July 21 council meeting what strategy to follow in the second half, he said.

Money supply grew at a low-er-than-expected annual rate of 13.7 per cent in May, down or 13.7 per cent in May, nown from 15.4 per cent in April. But economists said there was no chance the Bundeshank would meet its 4-6 per cent target for M3 growth for the year.

On a brighter note, Mr Tiet

meyer said the economy of eastern Germany is showing gradual signs of growth but warned that the high level of financial transfers to the region would have to continue for some time." He insisted that the transfers from western Germany to the east, which last year totalled DM140bn (£56bn), must he used "for purposes of invest-

Several indicators pointed to a slow recovery in the east, he said. These included inflation which had "approached to a large extent" west German levels. Last month, eastern German inflation was 3.4 per cent compared to 3.0 per cent cent in western Germany. In addition, the rate of unemployment is slowing down; and the number employed would probably "stabilise" at around 6m compared with almost 10m

before unification. In west Germany, the BDI warned that a continuing squeeze on disposable incomes would mean that private households would be hard pressed to maintain their level of consumption in the coming months.

savings quota, which has been sinking for four years, and the continuing decline in employwill remain very narrow," the BDI concluded.

By Kerin Hone in Corfu and

state and its high level of debt. Comparatively little EU funding has been disbursed for the aummit. According to the regional government office on Corfu, the main expense is a Dr3.3bn upgrading of Corfu airport. Mr Nikos Hytiris, in charge

Ionian islands, says: "Like other improvements carried out for the summit, it will help to boost the island's tourist industry long after the summit This weekend's summit is

Spain should move faster on privatisation and deregulation of state monopolies to increase competition in services and utilities, the Organisation for Economic Co-operation and Development said in a report released yesterday.
It also called for tighter con-

trol over regional government spending, state company management, social security abuse and and tax evasion. It said the government could reform some welfare schemes "to coocentrate benefits on the really

The encouragement given by the OECD to the government to press ahead with structural reforms and a tight budget stance coincides with pressure ruling Spanish Socialist party product. However, the Econ-

for a shift towards more left-wing policies following the Socialists' European election

The OECD said legislation to increase labour market flexibility, which came into force this month, was "a landmark for Spain" which would help lay the ground for sustainable growth However, the OECD it com-

plained of "hesitancy" in other areas where deregulation was urgently needed, such as telecommunications.
In spite of a restrictive 1994

hudget, the OECD said greater efforts were needed to meet EU public deficit targets set ont in the Maastricht treaty. It forecast that Spain's general gov-ernment deficit this year would remain at slightly above 7 per cent of gross domestic omy Ministry said it still hoped to hring the deficit down below this level. The greatest contrast between the OECD and Span-

ish government views was over the outlook for employment. Predicting economic growth of 1.2 per cent for the year, following last year e negative rate of 1 per cent, the OECD warned that Spain would probahiy have to wait until next year to see a fall in unemploy-ment and that the rate, currently close to 25 per cent, was "unlikely to decline significantly before 1996".

It predicted a further 1.2 per cent shrinkage in employment this year - about 140,000 jobs - although new apprenticeship contracts would help stem the

The Ecnnomy Ministry described this forecast as

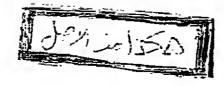

"excessive", predicing a reduction closer to 0.7 per cent and "a slight improvement" in the jobless rate by the end of the For 1995, the OECD expected

Spanish growth to be 2.7 per However, it warned that even with 3 per cent annual growth rates in the late 1990s,

new jobs would be created only slightly faster than the expansion of the labour force. "The fall in unemployment may be small," it said.

The OECD's expectations for inflation were broadly in line with the government's at 3.54 per cent from December to December, against 49 per cent

However, a report by Spain's Institute of Economic Studies said 4.5 per cent was more THE PINANCIAL TIMES

EUROPEAN NEWS DIGEST

Moscow wins new loans to help economy

Russian Prime Minister Victor Chernomyrdin yesterday ended meetings in Washington with \$820m in new loan commitments from the World Bank, \$400m in equity funds from the US Overseas Private Investment Corporation (Opic) and numerous smaller deals and joint ventures designed to assist the restructuring of the Russian economy.

Two of the World Bank loans, for \$240 and \$80m, will support form and land more respectively. This is the bank's

support farm and land reform, respectively. This is the bank's first attempt to help Russia lay a foundation for private agriculture. A \$200m World Bank loan will help improve private banking services, promote banking stability and help mobilise resources and credit allocation. A \$300m loan is to upgrade deteriorating roads. The bank's total commitments to Russia will be around \$1.5bn by June 30.

Opic announced support for construction of a generic drug manufacturing facility in Russia. On Wednesday it pledged \$200 in risk insurance for a US-Russian-German joint venture to redesign and improve the commercial aviation engine used

Warning on Bosnia peace plan

Bosnian government forces yesterday pressed forward against rebel troops in the north-west, amid warnings by international mediators that the warring parties would face serious consequences if they failed to back a last-ditch peace plan. With remote bope that Bosnia's warring leaders will endorse the newest peace plan, Mr Vitaly Churkin, Russia'a special envoy to former Yugoslavia, appeared pessimistic, calling it the "last chance to come to an agreement". His US counterpart, Mr Charles Redman, on a diplomatic shuttle last weekend tried to convince Moslem and Croat leaders to back the plan, devised by the so-called contact group, composed of representatives from the US, Russia, Germany, Britain and France.

In Washington, defence ministry officials from four European countries warned the Senate Armed Services Committee that a unilateral lifting by the US of the arms embargo against Bosnia would result in "war, interruption of bumanitarian assistance and the prevention of reconstruction. Laura Silber, Belgrade

German strikers offer truce

Leaders of Germany's postal and telecommunications workers yesterday offered to suspend their campaign of token strikes, as the danger of political deadlock over the country's privati-sation programme for Deutsche Telekom and the postal service loomed closer, The unions want to accelerate negotiations with their employers to determine post-privatisation deals for workers' participation in management and social benefits. They claim the employers are deliberately dragging out the talks to raise the political pressure for a solution, because the Bundestag has to approve the draft privatisation law by next Wednesday if it is to come into effect this year.

The law requires the approval of the opposition Social Democratic Party (SPD) as well as the ruling coalition to change the status of the postal service in the German constitution, but yesterday SPD deputies abstained when it went through committee because of continuing concern at the unresolved labour talks. Quentin Peel, Bonn

Italian pension cost rises

The cost to the Italian state of the constitutional court decision on pensions arrears is still growing, according to the bead of the INPS, which manages the country's state pension sys-tem. Italian press agencies reported yesterday that Mr Mario Colombo, INPS chairman, had estimated the pensions "hole" at L32,500bn (£13.5bn) after capital revaluation and interest charges are taken into account and said it was still growing. bo cited the figure at a me labour committee of the Italian parliament's upper house.

The Italian constitutional court ruled two weeks ago that the government should make up the difference between reduced benefits and full pension entitlements, allegedly denied to as many as 600,000 pensioners since 1983. At the time, following meetings with Mr Colombo, Mr Clemente Mastella, the labour minister, said the hole was at least L30,000bn. Andrew Hill, Rome

Political challenge in Bucharest

Romania's main centre-right opposition parties have lodged a no-confidence motion in the country's minority left-wing government. The opposition said it was bringing tha motion because the government's economic polices had failed, it had violated the constitution and many of its members were corrupt. The Democratic Agrarian Party, one of four small parties with a pivotal position in the country's hung parliament, said it would support the motion, which is expected to be voted on next Thursday.

Until now, the ruling Party of Social Democracy has relied on the DAP, a centre-left party supported by farmers, and the three other parties, for a slim parliamentary majority. It is the fifth no confidence motion the opposition has lodged since the PSD won elections in September 1992. The motion last December failed by just 13 votes. But since then tha government has secured \$1bn in new loans from the International Monetary Fund and other official lenders, inflation has halved and the economy begun to stabilise. Virginia Marsh, Bucharest

ECONOMIC WATCH

Sharp fall in Russian output

Industrial output (annual % change)

Russian industrial output in May was 29 per cent below tha level of a year ago, according to figures from the state statistics committee. January May output was 25.9 per cent below tha sama period last year. The statistics committee said one quarter of small and medium-sized enterprises had closed at least one production line or stopped one shift in May because there was no demand for their products. Production of some goods, including some drilling machines, some computers and some types of

road building equipment, had been stopped completely in the first five months. The statistics office said the fall was sharpest in the machine building sector where January May output was 45 per cent below levels a year ago. Light industry output was down 35 per cent. However, some officials say Russian statistics are unreliable. The statistics committee only appointed people to monitor the emerging private sector late last year and official data takes little account of the activities of private companies. Reuter, Moscow.

Swedish industrial capacity utilisation grew by 1.3 per cent in the first three months over the previous quarter to reach 85.9 per cent, underscoring a sharp upturn in industrial output as the country emerges from a three-year recession. Industrial output grew 10.6 per cent in the year to the end of April, mainly thanks to sharp export growth, the central statistics

bureau said. Finland's gross domestic product rose 1.6 per cent year-onyear in the first quarter compared with a 4 per cent fall in the first quarter of 1993, Statistics Finland said yesterday. Finnish industrial production volume rose 9.8 per cent year-on-year in the first quarter of 1994 compared with a 2.0 per cent year-onyear rise in January March last year.

■ The Dutch trade surplus narrowed to Fl 1.6bn (£571m) in February from Fl 1.9bn in January, the statistics bureau said.

Day of judgment for the CDU

Judy Dempsey reports on an east German test for Chancellor Kohl

r Theodor Lühr, a senior official at Saxr Theodor Lunr, a senior official at Saxony-Anhalt's economics ministry, was sitting in a sparsely decorated small office in the government complex on the outskirts of Magde-burg, the state capital. "What I worry about most is that when people vote in the elections, they will forget what it was like before 1989," he said.

Like many other officials, he has no idea if the governing Christian Democrats (CDU)/ Free Democrats (FDP) coalition will be returned to power on Sunday when the first of the eastern states goes to the

During the last state elections in Saxony-Anhalt in October 1990, the CDU received 39 per cent of the vote and the FDP 13.5 per cent. The Social Democrats (SPD) polled 26 per

In the local elections earlier this month, seen as the most reliable barometer, the CDU's support slipped to 31.1 per cent, the SPD's rose to 29.7, the FDP fell to 7.9 per cent, and the reformed communists, tha Party of Democratic Socialism (PDS), rose to 18.2 per cent.

Before German unification, the Stasi, or atate security police, had occupied the grey, dull government buildings.

One could hardly see out of the CDU has found it difficult to issue is handicapped by its windows, or dared to open get its economic message weak party organisation, and

get its economic message them. The air was stink-ing-thick and poisoned from pollution emanating from the across.
"People don't think about the long-term impact of the chemical works, the mainstay investments. They think about jobs and the high level of unemployment. "This is the of the Saxony-Anhalt economy. Four years later, the stench

'Our economic policy was based on one principle. We had to break the east's monolithic structure through privatisation, diversification, and investments'

has gone; the air is clear. "People forget those smells," said Mr Lühr.

"I also remember when 1 moved into these offices in late 1990, we only had three senior people to dismantle this huge centralised economy. Our economic policy was based on one principle. We had to break the monolithic structure through privatisation, diversification, and investments," he added. Since then, more than DM2.5bn (£1bn) bas been spent on upgrading the streets and

Another DM4bn has been spent on modernising the archaic telephone system. An additional DM12hn has been poured into restructuring the chemical industry. But the

price we have had to pay to dismantle this wasteful and inefficient economic struc-

ture," said Mr Lühr. Tha SPD has latched on to unemployment in the belief that the party will woo away voters from the CDU - and the PDS. Excluding those on job creation schemes and shorttime work, Saxony-Anhalt's unemployment rate is more than 17 per cent, higher than the average in the other east-ern states which is now 15.5 per cent. But as Mr Lühr argues, the unemployment rate is one of the highest because the state's manufacturing and chemical industry was one of the most inefficient and overmanned. But the SPD's ability

to exploit the unemployment

the increasing popularity of the PDS, both factors which could be to the CDU's advantage.

Unlike the CDU, FDP and PDS, the SPD in eastern Germany had no communist-sanctioned "bloc party" before unification. "We had to start completely from scratch," said Ms Sabine Kaspereit, the SPD mayor of the small town of Wengelsdorf, who is running for the Bundestag next October.

"We only have about 6,000 SPD members, whereas the PDS inherited all the Communist party organisations and

"The other parties could rely on a local network as well. We

started from zero."

The other problem facing the SPD is its image, "We told Mr Scharping he was colourless and that he had to have strong policies with which the easterners could identify, other-wise the PDS would drain votes away from us," said Ms Edith Braun, the SPD mayor from Stendal.

Many SPD officials admit that the worthy and respected Mr Reinhard Höppner, the party's leading candidate in Sunday's election, is no match for

the charismatic Mr Gregor Gysi, the PDS's most promi-

Yet Mr Christoph Bergner, the CDU prime minister, cannot rely oo a split vote in the left for the coalition to be returoed to power. Although the CDU is gaining in popularity in Saxony Anhalt, the party has to do far better than the recent local election results because the FDP is doing so

Part of the reason is the spate of corruption scandals in the government. Another rea-son is that the FDP relied on the personality of Mr Hans-Dietrich Genscher, the former foreign minister who was born in Halle, the state's second largest city, to attract support.

But now, similar to the SPD, Mr Klaus Kinkel, the FDP's leader and foreign minister, is considered dull and ineffectual.

"We are clinging onto power. The outcome might be a grand coalition," said Mr Helmut Starauschek of the economic ministry. Sunday's outcome will show whether Chancellor Helmut Kohl's policies in eastern Germany will be vindi-cated, or Mr Rudolf Scharping, head of the SPD, can make the vital breakthrough needed to dislodge the CDU, he says.

Berlin avoids early poll

By Judy Dempsey in Berlin

Berlin's coalition government yesterday averted carly elections after reaching a compro mise about the future of the clty's secator for interior

Deputles from the Social Democratic party (SPD), the former communist Party of Democratic Socialism, and the Bündnis 90 environmental party had demanded the resignation of Mr Dieter Heckel monn, the Interior secator, after it was disclosed his press spokesman had ties to a far right groop of intellectuals known as the Tuesday Circle.

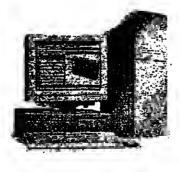

But Mr Eberhard Diepgeo. the Christlan Democrat mayor of Berlin, and Mr Ditmar Staffelt, head of the SPD, bad threatened to call elections. probably for October, if a noconfidence vote was called in the senate. The prospect of early elections worried both parties which ore coocerned about their popularity.

Rather than go to the polls, the CDU and SPD agreed that Mr Heckelmann need not resign, but at the same time be can no longer have responsibility for protection of the constitution, a brief normally held by the interior miolstry.

When it comes to PCs, Compaq and Acer stand out.

Yes, Acer.

We're not as big as IBM' or Compaqbut we're bigger than you think.

In fact, our sales are fast approaching \$2.8 billion. And if that surprises you, you're not alone. After all, Acer has been quietly manufacturing PCs for other computer companies for over 12 years. Throughout our 15 worldwide manufacturing and assembly plants. That's how Acer has become the PC market share leader in eight countries across the globe (not to mention one of the top three leaders in many other countries). It should therefore be no surprise that Acer was one of the first computer companies to deliver systems based on Intel®'s 90MHz Pentium® processor in all the major markets. We're confident the next time you think of leading computer companies, you'll think of Acer.

All things not being equal in Canada . . .

.... means that a country with negative inflation has had to raise interest rates, writes Bernard Simon

anada has notched up two vory different records in economic performance over the past few

days. Statistics Canada announced late last week that, alone among industrial countries, inflation had disappeared. The Bank of Canada's dogged sixyear battle against inflation, reinforced by cuts in tobacco taxes, was rewarded with a 0.2 per cent drop in consumer prices in the year to May. At the same time however,

Canadians are reeling from some of the industrial world's steepest jumps in interest rates. The Bank of Canada's trend-setting Bank rate has climbed from a 30-year low of 3.87 per cent in early February to 7.09 per cent this week. Commercial banks this week lifted their prime lending rate to 8 per cent

Towering real interest rates have raised fears that the economic recovery, which seemed to be gaining strength from a fragile start, could be in jeopardy. The Toronto stock

its lowest level of the year on Tuesday, 22 per cent below its

peak last March. The prospect of sharply higher debt-service payments also risks undermining a recent drive by the federal government and the 10 provinces to contain their budget deficits. The federal government last February projected a drop in

It is paying for fiscal laxity and political uncertainty

its deficit to C\$39.7bn (£18.8bn) in the year to March 31 1995 from C\$45.7bn last year. But the estimate was based on a long-term bond rate of 6.1 per cent, far below the current yield of 9.5 per cent.

Finance department officials have warned their minister Mr Paul Martin that his budget projections are being derailed. But Mr Martin, whose relationship with his senior civil serexchange's TSE-300 index hit vants is said to be cool, is con-

fident that the aberration will turn out to be temporary.

"As economists are wont to put it: if everything else is unchanged, lower inflation will bring about lower interest rates," says Bank of Montreal chief economist Mr Lloyd Atkinson. "But not everything remained unchanged."

Canada has been side-swiped by the upheaval in global markets since the US Federal Reserve began tightening mon-etary policy in February. The bond market, like that in the US, has suffered from the scare caused by higher oil, wheat, copper and other commodity

But Canada is also paying an extra price for fiscal laxity and political uncertainty. As one commentator noted in yester-day's Globe and Mail newspaper: "If high rates are justified in Germany and higher rates are justified in the US, then especially high rates are going to be visited upon profligate, politically divided Canada."

The federal government and the 10 provinces have amassed a mountain of public sector

debt over the past decade. Their combined debt burden has hallooned in the past 12 years from 43 per cent to 97 per cent of gross domestic product. The ratio is set to rise to 108 per cent in 1997, even if governments achieve the deficitcutting targets they have set

The jitters are reflected in a widening spread between yields on Canadian and US government long bonds. The gap has grown from less than 1 percentage point in February, when it looked as if Ottawa's success in curbing inflation might bring Canadian interest rates down to US levels, to 2.1 percentage points.
On the political front, ner-

ss is again rising as the debate over Quebec's future moves to centre stage before elections in the francophone province this autumn. The uncertainty is reflected in the gap between yields on long-term bonds issued by Quebec and neighbouring Ontario, which has widened by one-fifth of a percentage point since the

The separatist Parti Québécois, which has pledged to call an independence referendum within a year of taking office, is well ahead in public opinion polls. PQ leader Mr Jacques Parizeau dld not endear himself to the investment community with threats earlier this month that a PQ government might cut off business with banks and securities dealers that publicise the potential costs of independence

markets has given the federalist side some badly-needed ammunition. Mr Jean Chrétien, the prime minister, assured parliament on Tuesday thet interest rates would drop if the ruling Liberals were reelected. Few economists would disagree.

Another consolation for the Liberals is that their leader Mr Daniel Johnson remains personally more popular than Mr Parizeau.

For the time being however in Mr Atkinson's words, "there is ample reason to believe that the air will be filled with uncertainty for months to come - an ontcome that is likely to produce not only a lot of volatility potentially, but much higher interest rates on average than would otherwise be the case."

The nps and downs have been amplified by the rising involvement of foreign inves-tors, estimated to hold almost half Canada's total debt. Their view that Canada is a potentially high-yielding but fickle tment is likely to make But the turmoil in financial for roller-coaster markets

Venezuela's currency falls

By Joseph Mann in Caracas

Venezuela's currency, the bolivar, has fallen sharply this week, amid public concern over the government's haudling of the country's banking crisis and rising fears of exchange controls or other dramatic government action.

Strong purchases of dollars drove the bolivar to 200 per dollar at midday yesterday in Caracas commercial banks, a 10.5 per cent devaluation since the beginning of the week. The bolivar has fallen by 47 per cent since the end of 1993. Demand for dollars has been intensified by delay in the re-

opening of seven commercial banks and a commercial finance company closed by the government on June 14. Government officials have made contradictory public statements as to when the affected banks would reopen

and how much money each depositor would receive. Three banks in which the government has intervened,

Amazonas, Bancor and La Gunira, reopened yesterday, behind schedule, to begin pay ing depositors up to \$500 (£225)

But it is not clear if individual depositors will eventually be paid a maximum of an bothvars (about £14,300) as stipulated by current legislation, or double that, as suggested by one government official. The banks subject to intervention held in all about \$2.6bn in public deposits as of May 30.

in May, the government reportedly came close to applying foreign exchange controls amid heavy buying of dollars following the abrupt resignstion of Mrs Ruth de Krivoy as central bank president in April. Fears have risen that the government may again beconsidering this strategy.

The central bank has not released figures on its international monetary reserves since April, but the country's serves fell by 14 per cent, or \$1.7bn, during first quarter of

WORLD CUP

'Miracle on grass' as US beats sluggish Colombia

By Patrick Harverson in New York

"I don't believe in miracles," said US coach Bora Milutinovic after his team's stunning 2-1 victory over Colombia in Group A of the

World Cup on Wednesday night. Milutinovic aside, anyone else involved in US soccer probably does believe in the miraculous after the national team trampled over

one of the pre-tournament favourites at the Rose Bowl in Pasadena. The defeat of the Colombians ranks with 1980's "Miracle on Ice" – the US ice bockey team's win over the Soviet Union in the Lake Placid Winter Olympics - as the most remarkable

feat in US team sports history. History, however, will have to impact of the US triumph is that it virtually assures the team's progression into the second round. The Americans' present four-point tally looks sufficient to take them through, even with one game left (against Romania on Sunday).

The tournament's organisers were jubilant at the US team's feat. Jim Trecker, spokesman for World Cup 1994, said yesterday: "The World Cup's already been a great

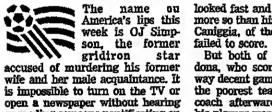

The 2-1 defeat of Colombia was extraordinary as much for its manner as for the result. Although the home team opened the scoring after 35 minutes courtesy of a freak own-goal by Colombian defender Andres Escobar, they dominated the rest of the match with sturdy,

patient defending and lightning-quick attacks. the 52nd minute when striker Ernie Stewart ran on to Tab Ramos's perfectly flighted pass to lift the ball past the on-coming (and already notorious) Colombian

keeper, Oscar Cordoba. But the US were denied the perfect finale when Marcelo Balboa's spectacular overhead kick flew only inches wide with Cordoba

Stars judged by their on-field feats

The tournament's dominant personalities are beginning to emerge, writes Jurek Martin in Washington

or reading someone pontificating on this great national "tragedy." On the one hand, the vox pop generally speaks of its "love" for OJ and its disbelief that he could have committed such a crime. On the other, the pundits pronounce - as, typically, did Anna Quindlen in a New York Times column headlined "Remember Nicole Simpson" - that "this is not the story of a fallen idol" but of a man who went beyond

wife-beating, bad enough, to mur-

der. Throw in some media angst about overkill and the cup of talk shows is filled to overflowing. The great blessing for the soccer stars gathered here for the World Cup is that all, except possibly Argentina's Diego Maradona, are closed books to Americans. Profiles delve into Jürgen Klinsmann's engaging wanderlust, which the German likes to exercise in this country, or Roberto Baggio's un-Italian Buddhism, but they are really only the coloured wallpaper behind the reality that, for 31 days and assuming they do nothing egre-gious, the players are going to be judged only by how they perform on

So, after nearly a week, the question logically arises: who are really stamping themselves on the cup, rather than the opposition's calves, who have egg on their faces, and on whom is the jury still out?

The simplest criterion is goals. By that yardstick, the star so far is Gabriel Batistuta of Argentina. With a bat-trick against Greece, he

The name ou looked fast and incisive, though no America's lips this week is OJ Simp-Caniggia, of the stringy hair, who But both of them - and Mara-

accused of murdering his former dona, who scored and had a halfway decent game - were up against the poorest team yet seen, whose coach afterwards complained that his players were more interested in being photographed with Maradona than actually competing with him. Four players have two goals – Klinsmann, Juan Andoni Goicoechia of Spain, and Gheorghe Hagi and Florin Raducioiu of Romania. All have benefitted from goalkeeping mistakes, with the Spaniard freely admitting that his goal against Germany was uninten-tional, a slightly mis-hit cross ending in the net courtesy of Bodo Illgner's leaden-footed miscalculation. But Raducioiu, who could easily have had two more against Switzerland but for fine goalkeeping, has

looked a complete attacker. two games as well, capable of sprinting past defenders on either side. He also falls more dramatically than any other player yet observed, which is saying something since just about everybody here is capable of scoring 5.8 for

Other strikers who have looked the part and found the net once include Rashidi Yekini of Nigeria and Francois Oman-Biyik of Cam-eroon, confirming all the good impressions he made four years ago in Italy. Both are big, strong and direct, but leavened with finesse. Brazil's Romario, who scored

once and won a penalty, and Bebeto (conveniently No's 7 and 11 for Americans weaned on convenience stores) are small, quick and dangerous, with excellent rapport.

Lothar Matthaus, the German sweeper and captain, has chosen so far to play his cards close to the chest, as have, mostly, his team. His speed is ample to vacuum up any defensive problems, but the lacerating long passes and rapid forward rushes in two games can pretty much be counted on the fingers of one hand. He is not yet playing as Franz Beckenbauer once did, but then he has not needed to.

Rai, the more ponderous but still elegant Brazilian mid-fielder, and Hagi consider themselves mid-field artists who play far enough forward to create and score goals, which both have.

Hagi, though, can disappear from games, as in the second half against Switzerland, while Carlos Valderrama, the Colombian engine room, is firing on even fewer cylinders than four years ago.
The virtues of more conventional

hard-running counter-attack from mid-field have been amply displayed by Andy Townsend and Ray Houghton for Ireland, John Harkes for the US, and, best of all, Alain Sutter of Switzerland.

Wim Jonk and Ronald Koeman of Holland have different sorts of calling cards: hard-nosed defence mixed with thunderous shots from way beyond the dyke, Jonk's strike from a good 30 yards against Saudi Arabia ranks as the most spectaco lar (a la Sir Robert Chariton) goal of the tournament to date, but Koeman could match it if he sets his range-finder right.

Goalkeepers have experienced mixed fortunes. There have been fine saves a-plenty, none greater than Michel Preud'homme of Belgiom palming a close Moroccan header on to his crossbar, Erik Thorstvedt of Norway and Spurs at full stretch to deny an inter-continental Mexican missile, and Dmitri

Romanian midfielder Gheorghe Hagi is stopped in his tracks by Switzerland's Stéphane Chapmisat during Wednesday's game

Kharin of Russia and Chelsea, beleaguered all day by a magical Brazil, incredibly flicking a short-range certainty over the top.
But there have been horrors from
the last line of defence, too. It is indecent in a family newspaper to identify offenders by name, but the keepers from Colombia, Bolivia, Saudi Arabia, Greece and Germany (all right, the German's name is Iligner, heretofore mentioned) have all cost their sides a point or two or

like the Saudi Al Deayea, had done yeoman duty beforehand). But all their glories and mistakes

still remain ephemeral, because all have played only one game or two. They can all improve or recover or cliché for the ages). It will take a much larger hand - of God or a jury - and far more time for OJ Simpson to disappear from the national con-

Ireland aim to conquer **Mexico and midday heat**

After their dour win against Italy, Ireland play Mexico in Orlando today in Group E, the World Cup's toughest first-round group - and are spoiling for an early

entry into the second round. Ireland's coach Jack Charlton is counting on his players to pressure the Mexican defence and its 5ft 9in goalie, Jorge Campos, and boping that Irish stamina does not wilt under the midday sun. In turn, Mexico is set to boost its attack with added speed and

"They live in this kind of heat. we don't," said Chariton of the Mexicans, wondering about today's game-time temperature. During the first World Cup game at the Citrus Bowl, Orlando, last Sunday, it peaked at 109°F (43°C) on the pitch itself.

"This match is a great incentive to qualify and top our group," said Chariton. That would mean Ireland would play in New Jersey in the second round, with overwhelming local support.

Charlton said the Mexicans needed a win today to stay in the tournament. Mexican coach Miguel Meila Baron said: "We will try to be more offensive, more aggressive on the attack. The way they are going to play is just wait for counter-attacks. They'll try to take advantage of mistakes." After the loss to Norway, Baron is expected to bring on Alberto

Garcia Aspe. The mid-field star was suspended for the first game. "He will be of great help," said captain Ignacio Ambriz. Garcia Aspe is known for pin-point pass-ing and a lethal left-foot shot. Baron could also call on striker Carlos Hermosillo, a veteran from

the 1986 World Cup team, when Mexico reached the quarter-finals. Ireland will count on their traditional game of long passes, crosses and headers to pressure the comparatively small Mexican defence. But Tony Cascarino will not be in the Irish side. The

Latin America: chance to break the cycle of sorrow

Stephen Fidler on prospects after action on budget deficits, protectionism and the role of government

Bank'a chief Latin American economist. Mr Ssbaatian Edwards, lik-

ECONOMIC region a economic history to Gabriel Garcia Marquez's novel, One Hundred Years of Solitude. In the novel events follow irregular and magical cycles of sorrow and frustration.

He now aees rays of hope that this melancholy sequence may be broken by the eco-nomic measures that governments in the region bave undertaken - to varying degrees - over the last five years. These measures have brought budget deficits under control, ended years of protectionism and sharply reduced the role of government, thereby vastly enlarging the part played by the market.

On the face of it, they have been mostly successful Infla-tion has fallen dramatically in the 1990s, except in Brazil, and the region as a whole has enjoyed per capita growth, though modest, for the first time in more than a decade.

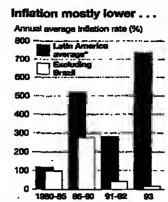

The reforms have had other. often underestimated, effects. Many companies are looking for the first time to markets beyond their own borders, usually within the region.

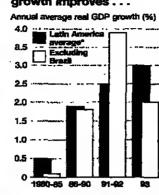

Even if Latin American governments stall in their efforts to achieve formal economic integration - another feature of the 1990s - a de facto integration is under way at the corporate level.

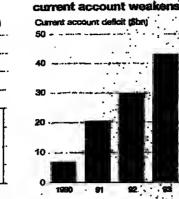

Companies are also undergoing profound restructurings to compete in an international eovironment. Some are making important gains in productivity, as management and workforces realise that new working practices are needed for survival.

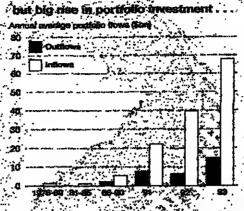

Yet many see themselves in a vice between high-technology

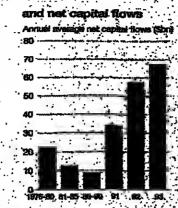

Reform efforts reap a mixed harvest

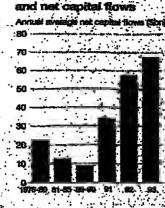

economies of Asia, in particular China. Imports flood into the shops, and Latin America's trade deficit widens.

A study published today by the McKinsey management consultancy finds that in three of four industries studied. Latin American labour productivity was extremely low.

"in steel, productivity averaged 37 per cent of the US level, 31 per cent in the food processing industry, and 29 per ent in the retall banking

Only in telecommunications did productivity begin to

approach American levels. But McKinsey also shows that productivity in two of the industries - telecommunications and steel - has increased significantly in recent years, especially in Mexico. Brazil and Argentina.

Latin America's steel producers can remain internationally competitive because of low labour costs, it concludes.

The question is whether these productivity increases will be widespread or rapid enough to build a platform for exports. Without export growth doubts will remain about the foreign exchange generating capacity of some world and the ultra low-wage countries which still register

very high debt ratios. According to figures from JP Morgan of the US, Argentina's debt-toaxport ratio hardly changed between 1982-84 and 1991-93 at over 430 per cent. Brazil's Venezuela's around 200 per cent, have not improved much

Last year, the region's \$40bn (£26bn) plus current account deficit, which includes interest payments on debt, was easily financed. This year, with foreign capital markets more hostile, the economies with the

largest deficits look vulnerable. For now, the region's only undisputed comparative advantage remains in raw materials and energy. Most governments are welcoming foreign investment, and many mining and energy companies are getting excited about prospects.

While the development value of raw material exploitation has been questioned, it at least offers flows of foreign exchange to allow breathing space for other sectors become productive. Indeed, Latin America's most successful economy, Chile, built the initial phase of its strategy on the exploitation of raw materials. However, Chile pursued an

exports in the 1980s, including a crawling peg devaluation of inflows have forced some peso appreciation, but the long-standing disposition to keep the exchange rate competitive has encouraged invest-

Other countries have either been less successful in stemming exchange rate appreciation, for example Colombia, or have explicitly used the exchange rate as the central plank in fighting inflation such as Argentina and Mexico. A competitive exchange rate

ment in export sectors.

was also, according to a book published by the World Bank last year, an important feature of the economic success of east Asian economies. The east Asian economies "avoided strategies of macroeconomic stabilisation that stressed the role of the exchange rate in breaking inflationary expecta-

The book, The East Asian

Miracle describes the following as common factors in

■ Low inflation and competitive exchange rates ■ Successful building of human capital, in particular universal primary education ■ Creating effective and secure financial systems, which encourage savings
Limiting price distortions ■ Disposition to absorb foreign

Limiting the bias against agriculture ■ Strong institutional mecha-

nisms, including a meritocratic and well-paid bureaucracy. While economists caution that this is not a unique and infallible recipe for success. Latin American countries score only sverage marks in

important areas. in some, the recipe is already impossible to follow, The need to maintain sccess to markets in the industrialised countries will make it difficult to provide

domestic protection for export

Savines rates, while rising, are still well below levels in Asia. Latin America'a average, says Ms Barbara Stallings of the UN Economic Commission for Latin America, is 19 per cent of GDP, compared with Asla's 29 per cent. This is also at the core of the region's overdependance on foreign

The competence of Latin American governments to drive this agenda is also open to question. The UN Human Development Report, published last month, shows many Latin American countries raise as much in tax revenues as their Asian counterparts.

However, they have spent it badly, in part because of corruption. According to Mr Juan Llach, Argentina's economic planning secretary: "The state used to direct 7 per cent of GDP a year to investment, but

since it bought everything at only equivalent to 31/2 per

In 1990, the Venezuelan government spent 4.1 per cent of its gross domestic product on education, more than Singapore's 3.4 per cent, but the quality of spending was atro-

According to one study, 43 per cent of the education budget went into administration and planning, and 37 per cent to further education, leaving only 16 per cent for basic and 2.9 per cent for secondary education.

"Education appears to be the singls most important determi-nant of inequality at any given time," says Mr Edwards at the World Bank.

Mr Alejandro Foxley, Chile's former finance minister, reckons that the crucial difference between Asia and Latin America is wealth inequality. In Asia, the richest fifth has

between 5 and 10 times more wealth than the bottom fifth; in Chile the ratio is 12, in

Argentina 16 and Mexico 27.
These divisions have weakened social consensus in Latin America. And, unliks many parts of Asia (and indeed Pinochet's Chile) Latin Americans have a choice when they elect their governments. Already in Venezuela, Costa Rica and Colombia – voters have returned governments offering a softening of market oriented reforms. Elections are due in the region's three largest econ-omies - Brazil, Mexico and Argentina - in the coming 12

Mr Foxley asks whether the new economic order is politi-cally sustainable, particularly if Latin Americans cannot be persuaded that the benefits of reform are being equitably divided. If market reforms are or are seen as, widening the already-broad divide between rich and poor, then electorates will become intolerant of them. If this happens, the threat of populism - which offers only a return to Marquez's baleful cycle - may not be far away. By reducing their interfer-

ence in the economy, Latin American governments have provided the basis for escape from that cycle. Paradoxically though, the final escape looks like it will only be achieved through government action: in education, in improving ths quality of government spending and in making sure the benefits of growth accrue to more than a narrow proportion of the population. (Additional reporting by David

Pilling.) This is the first in a series of articles on Latin America's new

Durable goods orders up

By Michael Prowse in Washington

New orders for US durable goods rose more strongly than expected last month, underlining the strength of the US industrial sector official fig-ures indicated yesterday.

Orders rose 0.9 per cent between April and May, twice tha increase projected by most Wall Street analysts. Orders have risen in nine of the past 10 months and are now running 16.7 per cent higher than in May last year.

Orders for primary metals per ceot in the past year.

were especially strong, rising 4.7 per cent last month and by 21.3 per cent in the year to May. Orders for transport equipment were also vigorous, rising 2.2 per cent and 20.5 per

cent respectively.

The figures are not adjusted for inflation, running at less than 3 per cent per annum. Shipments of durable goods,

a guide to present capital spending, also rose strongly. Excluding the erratic aircraft sector shipments of nondefence capital goods rose 2.2 per cent last month and by 17.9

The orders figures reinforce the findings of a recent upbeat assessment of investment intentions by the commerce department. This indicated US companies were planning to raise apending on plant and equipment by 8.9 per ceot in real terms this year. Much of this investment is expected to raise industrial capacity and thus enable the economy to expand without putting strong upward pressure on inflation.

French troops poised to enter Rwanda

French troops flew into eastern Zaire yesterday in readiness for Operation Turquoise - the controversial military expedition to rescue civilians trapped in Rwanda's genocidal war. Transport aircraft landed the first soldiers of a 2,500-strong force at airfields in Bukavu and Goma on the shores of Lake Kivu. From there, the military intends to make short forays into western Rwanda, where thousands of persecuted

Tutsis are herded in concentra-

tion camps guarded by Hutu

militias. France won the UN Security Council's blessing for

its mission of mercy despite

sbortage of allies on the ground and the bitter opposition of the rebel Rwandan Patriotic Front (RPF), which believes France is intervening to deny them an outright victory in the civil war.

Yesterday, however, the RPF seemed to be softening its opposition to French intervention. "If the French stick to their humanitarian mandate, and do not interfere in our struggle, then we will have no quarrel with them." Dr Emmanuel Ndahiro, the RPF's military spokesman, said from the capital, Kigali. "But we still have misgivings about the French operation. We cannot exonerate them from the crimes committed by tha

The rebels distrust Paris use force if attacked. because of its military and in Paris Mr Alain Juppé, financial support for the government of Gen Juvenal Habyarimana until his death in an air crash on April 6. Having bolstered Rwanda's crombling army with military advisers, weapons, armoured cars and helicopters, France is regarded as an accomplice to the slaughter of Tutsis and Hutu opponents of the Habyarimana regime which followed his

France plans to lead quick missions into Rwanda to rescue endangered civilians, but has pledged not to make deep raids or to be drawn into fighting between government and rebel forces. The UN mandate authorises French troops to

terday sought to downplay the military and political risks for France intervening almost alone in Rwanda, in the face of hostility from rebels controlling two-thirds of the country.

Senegalese soldiers will be at our side and discussions are train with Guinea-Bissau," he told the French Senate yesterday. Senegal is apparently to send troops it had already agreed to contribute to the planned UN force due in Rwanda in late July, at which point France has said it will pull its troops out.

Mr Juppé said he hoped European countries would give France the logistic support the

US has already pledged. France will be pressing its European Union partners for backing when the Twelve start their summit in Corfu later today, Mr Alain Lamassoure, French EU affairs minister, said yesterday, adding that while "there might be 10 good reasons for not intervening, the one essential reason for doing so is that a whole people is in

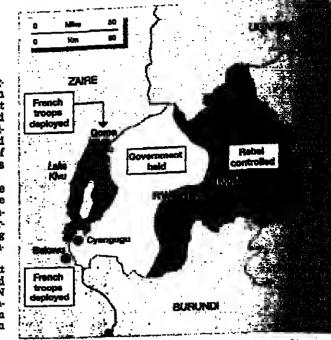

the course of dying". The French are setting up field hospitals on the Zaire border. But it is not clear whether they will just seek to evacuate refugees and wounded to the hospitals, or try to set up safe zones as they and other UN peacekeepers have sought to do in Bosnia.

Although Operation Tur-

ing operation until the UN can muster a multinational force, it has inadvertently undermined the work of the 400 UN military personnel who remained in Kigali after the majority of UN troops and all foreigners were evacuated in April.

Thousands of Tutais have also demonstrated against the French expedition in Bujumbura, the capital of neighbouring Burundi, which is bristling with the tensions of the Rwandan conflict

With anti-French sentiment rising in the RPF-controlled areas of the capital, the UN decided to relieve 42 Frenchspeaking African soldiers from their duties. They were flown to Uganda on Wednesday.

Agreement emerges to freeze nuclear plans and hold talks

Clinton's team breathes easy at N Korea accord

Enormous relief was expressed in Washington yesterday at the emergence of an agreement with North Korea that would freeze Pyongyang's nuclear programme and pave the way for talks in Geneva next

Clinton administration offi-cials had adopted a wait-andsee approach after former president Jimmy Carter returned from Pyongyang last week with an offer that apparently met US conditions for resuming talks.

When official confirmation finally arrived on Wednesday, it allowed the US to embrace Mr Carter's deal, a third option far more palatable than the policies of economic sanctions or military action which appeared a week ago to be all

The pursuit of economic sanctions at the United Nations never seemed very promising. North Korea's limited economic links with the rest of the world made it largely immune to such economic pressure, in the unlikely event that neighbouring China would agree to a strong sanc-

tions resolution. The option of bombing North Korea's nuclear facilities, advocated by several senior officials from the administration of former President George Bush, though in the more clinical language of "eliminating reprocessing capacity", carried with it the possibility of provoking at least some counter attack on South Korea, if not a full-blown second Korean war.

It remains to be seen how complete the victory will prove to be. North Korea's President Kim Il-sung may have folded, but poker rules allow him to keep his cards concealed, and the truth about nuclear fuel extracted in the past may now never be established.

For an apparent success, however, the US's achievement in getting Pyongyang to agree opment was greeted with an unusual degree of criticism.

George Graham reports on a sense of relief in Washington that there was a third way to resolve a thorny foreign

affairs issue

Why did the White House not come up on its own with Mr Carter's blindingly simple idea of talking directly to President Kim? Was it the White House's failure to brief Mr Carter properly that led him to say prematurely last week that the drive for sanctions had been called off? Why did President Clinton appear over the weekend to disown Mr Carter, only to embrace him again on Wednesday when he received confirmation from Pyongyang that the deal did indeed correspond with what the former president had announced These were the questions being

White House officials were irked by the carping tone with which their announcement was received.

When we have just had a positive step forward, I find it strange to speculate on how we messed it, so I'll try to get my mind around that," sniffed one senior administration official. The whole episode, coming

on the heels of about-turns and waverings on China, Haiti and half a dozen other interna-tional problems, has reinforced the image of Mr Clinton's foreign policy team as "the gang that couldn't shoot straight".

The criticism may be unfair, but at the least, the Climton team is the gang whose every shot is going to be viewed as astray by a White House press corps whose binoculars are trained firmly on the trigger finger, not on the target.

By Laura Tyson in Taipei

Taiwan has agreed to hold working-level talks with China next month in an effort to "promote cross-strait dialogue and rapprochement," a senior se official said yester-

Mr Kao Koong-lien, vicechairman of the Mainland Affairs Council, also indicated Taipei's willingness to resume high-level meetings with Beijing, but the timing and agenda remain unclear.

The move signalled a thaw in recent tensions sparked by the killings of Taiwanese tourists in China's Zhejiang Province in late March. Ties plunged to a seven-year nadir after the robbery-murder-arson attack on 24 tourists aboard a pleasure boat on Qiandao Lake near the city of Hangzhou.

The two sides will discuss repatriation of illegal Chinese immigrants and airline hijackers, fishing disputes and safety of Taiwanese travelling in the

This would be the fifth round of administrative talks since the second half of last year. Previous rounds have degenerated into squabbles over sovereignty issues.

Aden suffers worst barrage

Northern Yemeni forces pounded the southern city of Aden with the heaviest artillery barrage of Yemen's civil war yesterday as the south called for sanctions to force the north to stop the attacks, Reuter reports from Aden. Shells crashed into Aden's

northern suburbs of Mansoura and Sheikh Othman at a rate of one a minute in the evening after a brief afternoon lull. Residents said that, for the first time since the war began on May 4, almost all Aden's residential areas were being bombarded by northern forces, which are trying to crush the south's bid to secrete from a united Yemeni state.

Aden's population was estimated at 350,000 before civil war broke out. It has grown to over 400,000 as refugees fled

Attack comes straight after upper house agrees the national budget

Hata faces motion of no confidence

By William Dawkins in Tokyo

Japan's Liberal Democratic party, the country's largest political opposition group, yesterday launched a no-confi-dence motion against the minority government. The LDP moved into the attack straight after the upper house finally agreed this year's national budget, three months after it was due to take effect. The LDP and other opposition par-

The five-party coalition of Mr Tsutomu Hata responded by boosting its campaign to entice the Social Democratic Party to rejoin the government, in the hope of restoring its parliamen-tary majority. Mr Hata was closeted last night with Mr Tomiichi Murayama, the Socialist leader, in a last-ditch attempt to save his two-month-

finances were assured

The LDP attack paralysed attempts to resolve the US-Ja-

the recent currency turmoil, forcing Mr Koji Kakizawa, Japan's foreign minister, to shelve next weekend's talks with Mr Mickey Kantor, US trade representative. "It may not... be appropriate

for a minister from a govern-ment which has just had a no-confidence motion submitted against It to attend such talks," a foreign ministry offi-

Mr Hata admitted his government's fate hung on the result of talks with the Social-

ists. "I would like to stake everything, including whether to resign, on the policy talks between the coelition and the Socialist Party," he said. The Socialists left the government in late April in anger at the formation of a right-wing group excluding them.

Mr Hata said if he did resign, he would not call a general election, but leave it to opposition parties to form a new gov-ernment. An election would delay the final phase of elecelectoral boundaries. Japan's move from a multi-cent electoral system to a mix of proportional representation and single-seat districts would benefit parties such as Mr Hata's Renewal Party.

A parliamentary of was meeting last night to decide when to take the no confidence vote. If the SDP joins the coalition, the vote will fail. But up to 30 SDP MPs could ignore such a call, when the coalition's sufficient would

The rising yen: it was not always thus

William Dawkins tracks the Japanese currency from \$ parity in 1874

apanese exporters who complain about their currency's historic break through Y100 to the dollar might cheer themselves up by looking back 120 years.

For the yen was as mighty as the dollar itself when it was born as a gold-backed internationally negotiable currency in 1874, by order of the young Emperor Meijl Since then, it has neatly moved from a yen to the dollar to a yen to the

The first gold yen coins were minted on presses imported from Hong Kong when Japan was running a heavy trade deficit to feed its breakneck ernisation from medieval to industrialised country.

The name yen, meaning "round", was introduced by educated urbanites in the 1950s to replace the untranslatable 730, the forerunner of the modern yen. Tha ryo and the multiple

rival paper notes issued by warring dainyos, heads of feudal clans, were of such uncertain value that traders and financiers used a parallel tender, Mexican dollars issued by the Hong Kong and Shanghai Bank's Yokohama branch. These, still in circulation until the turn of the century, were the precursors of the first yen notes issued by commercial banks in the late 1870s, followed by government issued paper with the foundation of

the Bank of Japan in 1882. The emperor fixed the 1874 yen at 1.5g of gold, the same as the dollar of the time. Today, Japan: Yen and the stock market Yen appreciation. Tokyo stock market

worth \$586. Of course, the ven has been revalued several times since then and Japan's currency has been as volatile as the country's own fortunes over the

past century.

From its mighty birth, the yen steadily grew mightler, so that it was worth Y0.23 - or 23 sen - to the dollar by the out-

the same weight of gold is break of war with the US in 1941, according to Japan's central bank. The yen came out of interna-

tional circulation during and just after the war. Hyperinflation caused its value to collapse dramatically, forcing the authorities in 1946 to redenominate, by slicing two zeros off the face value.

The dehate over whether to

redenominate the yen again - which would restore parity with the dollar - has resurfaced several times, most recently after the 1986 round of yen appreciation, or endaka. Proponents believe it might stimulate consumer spending by making people feel their yen are even more valuable, but bankers in Tokyo scoff at In 1949, the US occupying

forces fixed the Japanese cur-rency at Y360 to the dollar, its rate when Japan entered the International Monetary Fund three years later. At first, Mr Ralph Young, the US Federal advised a rate of Y270 to Y300. In the event, Japanese industry was let off lightly.

Japan's rapid industrialisation in the 1960s made Y300 clearly undervalued by the time the US abandoned the gold link in 1971. It shot up to Y270 in less than a year, at which it hovered for nine months, a rare period of stability, until the first oil crisis.

The surge in oil prices hit the economy so hard - even causing the neon lights to go out in Ginza, Tokyo's prestigious shopping area, recalls

one seasoned observer - that the exchange rate slumped quickly back to Y300. The yen dipped again after

the 1979 oil price shock, tanta-lisingly suggesting a pattern; that it should go down when commodity prices go up, as they are doing now. "High commodity prices are very bad for Japan's terms of trade. That's one of the reasons why I fail to get excited by the yen's present strength," says Mr Geoffrey Barker, chief econo-mist at Baring Securities in The yen started to climb

again with the 1980s export boom, as Japanese cars and cheep high quality consumer electronics swept Europe and the US. The easing of US mone-tary policy, reinforced by the 1985 Plaza accord to curb the value of the dollar, caused the yen to shoot off again to around Y140 by the end of the decade, its value virtually dou-

while by Japan's economic "bubble". And then, perversely, the onset of recession at the start of the 1990s pushed it up even higher, to nearly Y100 last August, as a fall in imports caused the export-dependent economy to record an increasingly wide current account surplus.

In contrast to previous sharp rises, the latest surge, to Y99.85 at one point, has more to to with the dollar's weakness against European currencies than with any inherent talent of the year for defying gravity. On Tuesday the Asahi Shimbun electronic newsboard, on top of a Ginza towerblock. flashed the news to the crowds below that the yen had crashed through Y100. For the viewers below, the figure could have been a symbol of short-term complications for the economy or as one more indicator of the

PLO chief delays trip to liberated Palestine

Arafat sits tight for a better financial deal

By Roger Matthews. Middle East Editor

The timing of Mr Yassir Arafat's first visit to the newlyliberated areas of Palestine could be decided as a result of emergency meetings in Wash-ington today involving leading members of the Palestine Liberation Organisation, the World Bank and US officials.

Mr Arafat, chairman of the PLO, has delayed announcing a date for his trip largely because he is not satisfied with the financial arrangements for the new self-governing authority which will take over responsibility for the Gaza strip, Jericho and later much of the West Bank.

More than \$2.3bn (£1.5bn) has so far been pledged by international donors for development projects in the territories over the next five years, but serious problems have arisen over start-up costs of the new Palestinian authority and covering its budget deficit in the first year of operation.

Mr Ahmed Qurel, also known as Abu Ala, who heads tbe Palestinian Economic Conneil for Reconstruction and

donors earlier this month that \$177m needed to be paid into a Palestinian account. "Without it, we cannot build new administrations, or pay tha police force and employees."

Mr Arafat said in Tunis on Tuesday that offers of cash aid so far were "derisory". Senior officials added that he would not decide on the date of his trip to Jericho until the issue was resolved.

Aid donors have pledged \$720m out of \$2.3bn for the first year, of which \$80m has been disbursed and a further \$350m committed to specific projects. However, legal restraints prevent some governments from transferring aid pledges into direct budget support, while others are demanding additional "transparency and accountability" by Palestinian institutions before releasing

The cost of covering start-up costs of the new Palestinian authority and its budget deficit this year is put at \$168m. Some \$91m had already been pledged before a donors' meeting in Paris earlier this month, which brought further commitments of \$42m, including contributions from Saudi Arabia and Development (Pecdar), told Kuwait which had previously

refused to consider any direct cash payments to the Palestin-

These contributions have been paid into the Holst Fund, named after Mr Johan Joergen Holst, the late Norwegian foreign minister, who played such a central role in facilitating the September 13 outline peace accord signed by the PLO and Israel. The fund, administered by the World Bank, stands at about \$55m. PLO officials, headed by Mr Qurei, wish to know from the bank how quickly this money can be dis-

At the same time, the PLO team will seek US help in pressing other donor nations to provide the remaining \$35m required to satisfy budget and other costs until the end of this year. Members of Pecdar have emphasised it is difficult to engage in planning longer-term projects while immediate financing requirements for 1994 remain uncertain.

Mr Arafat appears equally determined not to make his trip to the territories without having at his finger tips at least some of the financial patronage which over many years has helped sustain his

Britons held by Kashmir militants set free

By Alexander Nicoli, Asia Editor

Two Britons held by Moslem militants in Kashmir for 17 days were set free unharmed yesterday. Mr Kim Housego, 16-year-old son of a former Financial Times correspondent,

and Mr David Mackie, a 36-year-old London video director, were released to local journalists who delivered them to Mr David Fitton, a British diplomat, in Srinagar, summer capital of the Indian state of Jammu and Kashmir.

"We were treated well the whole time. They gave us plenty of food and extra blankets," Kim Housego said. The militants, numbering about 20, had moved hideouts frequently since kid-

separate trekking holidays.
Four Kashmiri journalists were summoned yesterday to Anantnag, south of Srinagar. Eight militants, some of them armed, handed over the Britons and insisted they should not be taken to the police in Anantrag but be delivered to their families in Srinagar. David and Jenny Housego, Kim's parents, were in Ananinag awaiting the release, but eventually heard that their son and Mr Mackie were free and in Srinagar. Mr David Housego, former FT New Delhi correspondent and now a Delhi

businessman, was at the centre of

attempts to secure the release. Operat-

ing from a houseboat in Srinagar, he

secured an undertaking from the Indian

authorities to refrain from actions which could jeopardise a safe release and travelled into the mountains to napping the pair while they were on meet the militants last weekend. There had been signs release was

imminent for several days. But efforts appeared to have been set back on Monday by the murder near Anantnag of Mr Qazi Nissar, a Kashmiri Moslem leader acting as an intermediary with the kidnappers. The murder, which caused public outrage in Kashmir, appeared unconnected with the kidnap, Mr Housego yesterday described Mr Nissar as a "generous and warm man". Messages from the Pakistani government and Pakistan-based militant groups, calling for release of the cap-tives, had clearly influenced the kidnap-

responsibility for the kidnap although its leader in Pakistani Kashmir called for the captives' release. The kidnappers' demand for release of three jailed leaders was quickly dropped as they saw they had no support.

Kashmiri militant groups, who oppose Indian rule in the disputed tarttory, have been embarrassed by the kidnap; they saw it as hampering their
efforts to publicise alleged human rights violations by Indian security forces in Kashmir. Mr Douglas Hurd, UK forcign secretary, expressed his delight at the release and thanked the governments of India and Pakistan for their "co-operation and support".

Chinese ask to adjourn Hong Kong talks

By Simon Holberton in Hong Kong

Monday.

A high-level meeting of British and Chinese diplomats discussing Hong Kong's future yesterday took a dramatic turn when the Chinese side requested a suspension of the talks until

The two sides said the adjournment of the 29th meeting of the Joint Liaison Group was needed so that a sub-group negotiating the transfer of military land could have more time It is believed the Chinese

negotiating team needed time

to refer to Beijing for fresh

instructions after Britain has proved one of the most dif-

refused to improve on its final Today's meeting of a joint

to caution. In spite of encouraging remarks by senior Chinese government officials, a deal looks less certain, government officials said late yesterday. The issue of defence lands

settlement of airport financing

at this meeting has given way

resolve. For the past seven years the two have been negotiating about how many of the 39 military sites will go to the People's Liberation Army. The sticking-point in the

present talks, raised late on Wednesday, is understood to be a Chinese demand that the British guarantee completion of more than HK\$3.5bn (£298m)-worth of work on PLA

military facilities.

These include the construction of a base for the Chinese

China has made this demand because the UK cannot guarantee that Hong Kong's Legisla-tive Council (LegCo), which

ficult for Britain and China to has to approve all government spending, will agree to vote the money as asked.

British officials hope that China's new demand is simply a gambit by negotiators to show their superiors in Beijing that they have tried hard to secure the best deal possible. They see no chance of the UK Treasury underwriting the cost of Chinese military facili-

These officials point out that a failure to agree terms by July 6, when LegCo rises, means the Hong Kong government will be unable to finish the naval base by mid-1997 when sovereignty of Hong Kong passes to China. The British objective has

tary to accept as few of the military facilities in Hong Kong as possible. The UK also wants the PLA to accept that when military land becomes surplus to requirement, it ... should revert to the Hong Kong government for redevel-

There is considerable unesse in Hong Kong about the stationing of the PLA in the colony. Mr Deng Xiaoping, Chi-na's ailing leader, has decreed there will be a PLA presence in Hong Kong. It is generally assumed this force will number some 10,000 soldiers and a naval contingent whose

Russia energy deals gather pace

The \$10bn oil and gas agreement between Russia and a western consortium is the latest in a string of large deals to develop energy reserves around the Russian periphery. The agreement, signed in Washington late on Wednesday, covers the development of two oil and gas fields off Russia's Sakhalin Island by a consortium led by Marathon Oil of the US. Other partners include Mitsui, Mitsubishi, Royal Dutch/Shell

The fields - Piltun-Astokbakoye and Lunskoye - contain an estimated 750m barrels of oil and natural gas liquids, specific projects before they commit sian periphery rather than rely on the and 14.000bn cubic feet of gas. Marathon says peak production of 180,000 barrels a day of liquids and 1.5bn cubic feet a day of gas is expected four years after the go-ahead is given for full-scale

That, however, must await passage by the Russian parliament of an oil and gas law to govern production-sharing agreements such as the one signed this week. Some western oil companies are

substantial funds in Russia.

Marathon says Russis would receive more than 50 per cent of the production revenues from the project, which is one of a number envisaged for Sakhalin in spite of the harsh operating conditions in the area. Much of the work in the area can only be done between May and mid-October, when winter storms make construction impossible. Many big western oil companies have

form of separate legislatioo covering but self-contained projects on the Russpecific projects before they commit sian periphery rather than rely on the Russian oil export transportation sys-tem, which is plagued by bottlenecks. The Marathon-led consortium plans

to bquefy the gas for direct sale to fast-growing Asian markets such as Taiwan or Korea. The nil will be piped ashore before being exported by tanker. The Russian government has supported such schemes because neither it nor any Russian oil companies have the financial resources to develop them.

S Korea names candidate for WTO and Mexico

trade minister. The Seoul foreign ministry said Mr Kim had a "good chance" of election by the General Agreement on Tariffs and Trade's 123 members, four-fifths of which are developing countries. Canvassing for Mr Kim among trading partners has only just begun, according to South Korean officials in Geneva.

Renato Ruggiero, a furmer

Many developing countries would in principle like to see a Third World candidate head the WTO, which will succeed Gatt next year. The Gatt job has always gone to a European. But developing country support could split on regional lines. To complicate matters, the US, which last year backed Mr Peter Sutherland, the KU nominee as Gatt director general, is said to favour Mr Salinas. The EU is not helping its own cause by delaying endorsement of Mr Ruggiero as part of the horsetrading over the EU presideocy and

other top jobs.
Under Gatt rules, the appointment of a director general must be made by consensus, after consultations being conducted by Mr András Szepesi, Hungary's Gatt ambassa-dor and current chairman of the contracting parties (members). The final decision will

VW set for windfall after China ruling

Tony Walker on a freeze on new players in the market that will benefit the German car maker

r Peter Loew, chief executive of Shang-hai Volkswagen, China's largest manufacturer of passenger cars, wears the smile of a man who knows that he is on to a good thing.

China's new automotive industry policy, which has been widely leaked to the Chinese press, specifies a freeze on new participants in vehicle assembly plants until 1996.

This could hardly have provided a more satisfactory windfall for Volkswagen which is rapidly expanding its manufac-turing and assembly facilities near Shanghai and at Changchun in northern China.

Il Ways the

miles set fr

Kong talk

"The policy will give existing joint ventures time to improve their products and introduce new models to reach world standards," Mr Loew said. He could have added that the moratorium will stretch Volkswagen's lead in the world's fastest-growing vehicle market, Demand is expected to soar in the next few years as more Chinese are able to afford their

In 1993, China produced 234,000 passenger cars of a tured locally. By the year 2000 demand is expected to exceed 2m passenger cars with local production accounting for about 1.8m of the total, accord-

ing to the Chinese plan.

sevenfold increase in production of passenger vehicles by the turn of the century. Such growth would be impossible without the entry of additional

foreign manufacturers.
Shanghai Volkswagen, which was established in 1985 as a joint venture (VW has 50 per cent) with the Shanghai Automotive Industry Corporation, Bank of China and China National Automotive Industry Corporation, produced 100,000 Santanas (a variation of the Brazilian-designed Passat) in 1993. It plans to raise output to 150,000 a year by next year with a second car plant at Shanghai, due to be finished

later this year.
At the same time Volkswagen is increasing engine production to 150,000 at its Shanghai plant with plans for further expansion. It is also increasing capacity at its Changchun facility where it is in partner-ship with the First Auto Works, producing Audi 100s and Jetta cars. Combined production of the Audi and Jetta exceeded 30,000 last year. Output is expected to increase this year to more than 40,000 and in

Mr Loew said Volkswagen, whose production of passenger cars accounts for about 60 per cent of China's total sedan outpnt, hoped to be producing ng to the Chinese plan. 600,000 vehicles in China by
This figure presnpposes a the year 2000, but this would

In the past year Volkswagen achieved a breakthrough when it lifted local content in its Santanas to more than 80 per cent, thereby earning a reduction from 48 to 32 per cent in duties on imported items.

Some 82.2 per cent of Santanas are now sourced locally and Mr Loew says Volkswagen has no plans to raise local con tent further at this stage since the company is now paying the lowest rate of duty on imported items; but there is scope for further increases in the 60 per cent local content of the Audis. Among the difficulties in

raising local content levels has been an under-developed components industry. Volkswagen relies on some 160 local suppliers, but quality is a frequent

Mr Loew said he hoped there would be more competition in the components sector under

Beijing has also declared that attracting foreign investment in the components sector was a key element of its automotive policy and that companies wishing to assemble cars in China would first have to demonstrate their good faith by investing in the manufacture of components and spare

Japanese and US car companies, which have been compar-

artising in Belling ahead of yesterday's opening in the capital of China'e higgest car show. The cars, known as Tianjins after the name of the city where they are built, are manufactured by Tianjin Auto Works/Dalinatsu Joint-venture company.

	Marchies .	1993 output

stively slow to respond to the opportunities in China, are planning Chinese components ventures as a means of posttioning themselves for the end of the moratorium on new participants in car manufacture

and assembly.

Mr Loew said that VW's equity had "increased tremendonsly" since the company's initial investment of Yn350m competitors were standing on (£26.7m). Shanghai Volkswagen

repatriated profits last year for the first time, making a modest contribution to the balance sheet of its troubled parent. Mr Loew is confident that sales of the Santana, Audi and

be taken by members at their Jetta will continue to be buoyant. Volkswagen would seem to have reason to be quietly satisfied with its 1984 decision to proceed in China while its

Can you light up the sky without clouding the air?

Natural gas - affordable, safe and available - is an iocreasingly popular choice for driving turbioes that generate electrical power all over the world. Although it hurns relatively cleanly,

combustion does produce nitrogen oxide, implicated in acid rain. Ahatement techniques bave reduced emissions, but beightened awareness among the industrial nations cootiones to geoerate tighter legislative controls and the development of ecologically-sound power plants.

Conventional methods of controlling emissions are costly and dampen efficiency. However, ABB research has now developed a way to hurn them off. It is a total solution, reducing pollutants while maintaining efficiency, thus coosuming less fossil fuel. ABB has installed its innovative "EV-burner" in the Midland Cogeoeration Venture, a joiot project to produce power for the Dow Chemical Company and the State of Michigan, USA. At full power load, this plant is now producing emission levels well below the world's most stringent requirements.

and distribution, in industry and transportation, ABB is committed to industrial and ecological efficiency worldwide. We transfer know-bow across borders with ease. But in each country, ABB operations are local and flexible. That means we can belp our customers respond swiftly and surely to technological challenges which stretch the limits of the possible. Like

burning gas without clouding the sky.

Creation of regulator proposed

Overhaul for **UK** pensions industry

By Norma Cohen, James Blitz, and Lisa Wood

A far-reaching overhaul of the occupational pensions industry, including the proposed cre-ation of a regulator with powers to enforce common standards, was unveiled by the British government yesterday. Its white paper was tougher than had been expected, endorsing many of the propos als urged by its own advisory panel, the Goode Committee,

nine months ago.

The paper also proposes that pension achemes meet minimum solvency standards, allow members to appoint at least a third of trustee boards, and contribute to a compensation scheme that will pay pen-sions if assets disappear through fraud.

Social Security Secretary Mr Peter Lilley said that the pre-vention of fraud was at the heart of his proposals. He emphasised that no single measure could provide a satisfactory defence against fraud, but claimed that the new arrangements could have prevented the Maxwell pensions scandal had they been on the statute

Mr Lilley said that his broadranging proposals would "strengthen the whole pensions industry by providing the three basic essentials of security, equality and choice."

Industry reaction to the white paper was generally sup-portive, although employers, scheme advisers and the pension industry's trade association all expressed some reser-

The Goode Committee was formed in June 1992 following the death of the late Mr Robert Maxwell and the subsequent discovery that over £440m had disappeared from pension schemes he controlled.

However the government proposes that the regulator be

less powerful than suggested by the Goode Committee. It will have to rely largely on whistle-blowing" by professional advisers and scheme members to uncover wrongdoing and will not routinely inspect scheme financial statements. Also, contrary to recommendations that it be financed from general reve-nues, the government proposes that a levy on industry finances its budget of about

Employers will have up to 10 years to meet new minimum solvency standards in full. However, once they take begin to take effect, employers whose schemes have less than 90 per cent of assets needed to pay liabilities will have to add additional cash almost immediately, a controversial proposal which industry had opposed.

The white paper also pro-poses the elimination of Guaranteed Minimum Pensions and the substitution of an alternative protection against inflation. They will be required to increase pensions in payment by five per cent or the rate of inflation, whichever is lower. The white paper also proposes linking tax rebates for personal pension holders to their age and allowing those about to retire some flexibility in buy-

The controversial Royal National Theatre on London's South Bank is to be listed as a building of special architectural interest. Heritage secretary Mr Peter Brooke said the theatre was being graded in recognition of its "outstanding architectural quality". Designed by Sir Denys Lasdon and built between 1969 and 1976, it has three auditoria - the Lyttelton, the Olivier and the Cottesion

investment aid level

The long-term future of international companies' English plants may be jeopardised if the UK government cuts back the regional aid it offers them to upgrade their facilities, a local Labour MP warned

resterday, Chris Tighe writes. Mr Doug Henderson said a foreign-owned company with a plant in his constituency had approached him for help after being told by the Department of Trade and Industry within the last week that its application for Regional Selective

Assistance had been rejected.

The MP said he feared the benefits of attracting to the UK such international companies making products for worldwide markets could be undermined if they then found maintain their future competi-tive edge, did not win UK gov-

ernment backing.
"If companies like the one in my constituency feel they aren't getting the regional support they did in the past, and the support they could get in other European countries, they will be less inclined to invest in the future and that mined." said Mr Henderson. "International companies can

locate anywhere." On Wednesday, the DTI confirmed it is tightening up the allocation of RSA grants for projects in England, as part of public spending constraints. It is also placing greater emphasis on the quality of jobs the projects would create.

The clampdown, which affects foreign investors and indigenous companies, is causing concern among economic regeneration bodies.

Warning on Nuclear jobs cut by 2,000

By Michael Smith

NEWS: UK

Nuclear Electric, state-owned generator, is to cut up to 2,000 jobs, more than 20 per cent of the total, in the next three

The company attributed some of the cuts to a recent decision by the industry regulator to cap prices in the wholesale electricity pool which it said could depress 1985-6 profits by up to £200m.

The company also said it had to compete against private sector generators who have cut their staff by more than a half since privatisation four years ago. The planned cuts will lead to a provision in the company's 1993-4 accounts. The company could not say what the provisions would be, but a total of more than £150m seems likely. This will partly offset the effect of a sharply improved

operating performance, where losses have been reduced to £224m from £564m in 1992-3 (excluding the effects of the nuclear levy). The job losses are the latest

in a series in the nuclear industry. Last month British

Nuclear Fuels announced It intended to cut 2,000 from the 7,000 jobs at its Sellafield repro-cessing plant in Cumbria over the next five years.
Nuclear Electric has already

cut nearly 5,000 from its 14,200 total of four years ago. Yesterday's announcement

came three days after the company called for ministers io privatise it as it published a submission to the government's nuclear review.

Union leaders said yesterday that in cutting so many jobs the company was trying to show that it could be as tough

four years ago.
"Workers seem to be the victims of a vicious circle of job cuts in which power compa vie with each other to see who can shed the most amount of labour," said Mr Mike Jerun, head of electricity at the Unison public services and utilities trade union.

Mr Danny Carrigan, national officer of the Amalgamated Engineering and Electrical Union, said he was astounded at the scale of the cutback which had been announced.

In a letter to staff yesterday Mr Bob Hawley, Nuclear electric chief executive, said the company had to continue to reduce costs following the pool price cap.
"We need to ... make good

some of this loss to achieve our goal of being the lowest cost

Disc journey planner a first

By Charles Batcheior **Transport Correspondent**

Travellers in the north-west of England will be able to plan their bus and train journeys based journey planner by

Cumbria County Council. The computer programme helps people find the most convenient journey by giving the departure, arrival and connecting times for trips within the county and to main desti-nations outside such as Manchester and Glasgow.

The council hopes that the disc, which costs £2.50, will be used by information centres, libraries, bus operators and hotels as well as local people and visitors with access to

a home or office computer. The programme lists 980 destinations and includes the timetables of more than 80 local transport operators. If the pilet is successful the general public and monthly for commercial organisations. The pilot scheme has cost

£8,000 to develop.
Further refinements which may be added if the pilot is successful include allowances for road works and diversions, estimated walking times in town centres and between rail-way platforms and details of bus boarding points.

The disc is the first in the

UK to include both train and bus times although BR has produced a disc of its nationwide timetables for the two past years. It sells about 4.000 copies at each six-monthly apdate. Individual copies cost 241 or £45 depending on the

Disc-based journey planners in the Netherlands, Norway, Finland and Deumark and b two Danish bus companies. A disc covering all forms of public transport is also available in the Netherlands.

The Cambrian planner has been produced by CVI, a Dutch company specialising in trans-port information systems, and Logan Interactive, a Scottish computer systems and applica-tions company. It can be used on 8086, 286, 386 and 486 IBM PCs or on IBM-compatible computers running MS DOS.

Major and Reynolds may agree N Ireland framework by mid-July

Ulster peace accord close

By Philip Staphens in Corfu and Tim Coone in Dublin

Mr John Major and Mr Albert Reynolds were on course last night to agree by mid-July the framework for e comprehensive political settlement in Northern Ireland

As the British and Irish prime ministers prepared for bilateral talks at the European Union summit in Corfu, senior Whitehall officials voiced confidence that they could clear the remaining roadblocks to the agreement before next month's Anglo-Irish summit.

Despite continuing differences over the shape and authority of proposed new joint boards to enhance crossborder co-operation and over repeal of Dublin's constitu-tional claim to Ulster, the officials said Mr Major was determined to find a formula to bridge the remaining differences over the "constitutional balance" of the accord.

The escalation of sectarian violence in the province underlined by last week's mur-der of six Catholic men watching football in their local bar has added further impetus to the search for an accord.

Once agreed the framework document - covering relations between London and Dublin, cross border co-operation and outline plans for a new assembly in Northern Ireland - will be presented as the basis for renewed talks between the constitutional parties.
It is understood that Britain

has rejected any suggestion that new North-South institutions could imply 'joint

authority" over the province. The Ulster Unionists, whose co-operation is a prerequisite to an eventual settlement in

interest" in the economic development of the province. The Irish foreign ministry wishes the boards to have executive powers," embracing the main areas of economic activity of mutual concern to

the two parts of the island. For his part, Mr Reynolds is arguing that a commitment by the Dublin government to amend or repeal articles two and three or the Irish constitution must be contingent on an overall political settlement acceptable to nationalists as well as unionists in Ulster.

With officials on both sides stressing last night that the framework document would not be overly "prescriptive", there appeared scope for the differences to be finessed by careful language.

The framework document is expected to reaffirm that the present arrangements for intergovernmental co-operation between London and Dublin should remain in place although a new political settlement would in practice supersede the 1985 Anglo-Irish agree-

|Compact disc prices

By Michael Skapinker, Leisure Industries Correspondent

'are not excessive'

Monopoly situations exist in both the music production and retailing industries, but neither operates against the pub-lic interest, the Monopolies and Mergers Commission said yes-

lic interest, and indicates that The commission, which pub-Blair government would lished its report on the UK music industry yesterday. limit intervention to "develop-ing and guiding" industry in areas such as technological found that prices of compact discs in the UK were not excesinnovation and research and id prices were "set at levels determined by effective It endorses Labour's policies on progressive taxation, devocompetition in the UK marlution, education and training,

The commission said that the five leading music companies form a complex monopoly, which means that they engage in practices which prevent, restrict or distort competition. The five - EMI, PolyGram, Sony, Warner and BMG account for about 70 per cent of the UK market. Among the practices referred to by the commission are restrictions on parallel imports, which allow music companies to block imports of their own products from abroad.

The commission said lifting restrictions on parallel imports would be contrary to the European Community rental directive and would increase the risk of music piracy. It said it did not think freer imports of music would result in lower

music companies' complex monopoly did not operate against the public interest. The commission said that, in

record retailing, W.H.Smith and its subsidiary Our Price constitute a scale monopoly, as they supply more than a quar-ter of the market. However, it added that W.H.Smith, which accounts for 26.6 per cent of UK music sales, operated in a competitive market and did not make excessive profits.

Britain in brief Go-ahead for

Clarke puts tax cuts on back burner

Mr Kenneth Clarke, the chancellor of the exchequer, yesterday put tax cuts on the back burner by warning the cabinet that reductions in public spending would be "extremely tough."

Facing renewed right-wing calls for early tax cuts to restore Tory party popularity. Mr Clarke told ministers not to underestimate the difficulty of achieving existing forecasts. Backed by Mr Michael Portillo, the chief secretary to the treasury, Mr Clarke said that all the obvious targets for cuts had been tackled in last year's public spending

The chancellor's warnings, delivered at the beginning of a one bour debate on public spending, forestalled any discussion of tax cuts by the cabinet's right-wing minority.

Price shadow over recovery

The UK industrial recovery remains on track, but growing numbers of manufacturers expect to raise prices over the next four months, according to the latest Confederation of British Industry monthly industrial trends survey.

The survey, published today, says that companies' price expectations rose in June, after several months in which price expectations have been fairly

Around 21 per cent of companies questioned hope to increase domestic prices over the next four months, while only 9 per cent expect

to reduce them.
This positive balance of 12 per cent who expect to raise prices is significantly higher than in the months between February and May, when the balance ranged between minus 1 per cent and plus 4 per cent.

Nutter' jibe costs £100.000

Clive Cookson examines Russia's nuclear expansion programme, as it turns 40 today

A bittersweet celebration

the world's first nuclear power station

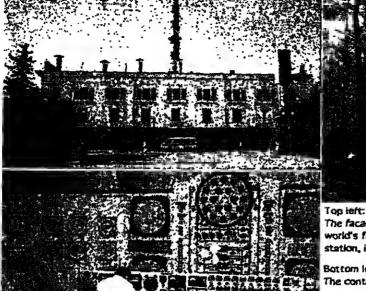

NP-1 - started to generate electricity behind a splendidly Stalinist architectural facade in Obninsk, a new science city built in the birch forests 100km south of Moscow. for Russia's sprawling nuclear industry, the 40th anniversary celebrations have a bittersweet flavour. The older separation retains proud older generation retains proud memories of the Soviet ri-tumph in the post-war race to use "atoms for peace" but for the younger scientists and engineers these are almost obliterated by today's prob-

Like all the vast state enter-prises inherited from the previ-ous regime, the nuclear industry is desperately short of funds. "The nuclear power sec-tor is owed 500bn roubles (\$250m) simply because consumers have not paid their bills," says Victor Murogov, director of the Institute of Physics and Power Engineering (IPPE), the nuclear devel-

opment centre in Obninsk. On top of its specifically Russian problems, the industry suffers from the worldwide perception of nuclear power as an energy source that is at best stagnant and at worst dying. And Chernobyl – a direct descendant of Obninsk's NP-1

 is an extra burden to bear.
 It would be a mistake, however, to regard the Russian nuclear industry as being in terminal decline. It continues to run on a vast scale and has ense staying power - symbolised by NP-1, relegated from electricity generation to a research reactor but still operating today at its original 1954 rating of 30 MW thermal

According to Rosenergoatom, the Russian nuclear utility, the country's 29 power-generating reactors produced 119bn kWh of electricity in 1993 - the same as the three previous years - with a load

with western levels. It even

managed to commission a new

reactor, a VVER-1000 pressur-

ised water reactor at Balakovo.

ministry has ambitious plans

for nuclear growth over the

next 20 years. These involve building about 30 new reactors,

both to replace old plants and

to expand the country's

The first steps will be to complete two reactors now in

the final stages of construc-

tion. Lev Kochetkov, a senior

IPPE scientist, says another

VVER-1000 unit is on course to

start up at Kalinin next year,

nuclear capacity.

The Russian atomic energy

The facade of NP-1, the world's first nuclear power station, in Obninsk. Bottom left:

The control room of NP-1

The dacha of Ivan Kurchatov who led the NP-1 design team.

plan includes five 800 MW fast reactors of a new design, the

to convince even the special-ists of that," he laments.

BN-800. The first is due to be built at Chelyahinsk in the South Urals.

Kochetkov points out that a 600 MW fast breeder, the BN-600, has run safely and efficiently at Beloyarsk since 1981. Last year its availability rating was 80.6 per cent - considerably better than the 76 per cent achieved by Russia's nuclear plants as a whole, "I believe the fast reactor is intrinsically safer than a conventional thermal reactor but it is not easy

fast reactors will produce more unwanted plutonium, IPPE engineers have re-designed the BN-800. "The original design produced 30 per cent more plu-tonium than it burnt," Kochet-kov says, "but the final design has a breeding ratio of about one; that means the amount of The international profile of IPPE would be raised enorplutonium built up will be no mously if it wins a bid recently more than the amount burnt.

We could continue that process to cater for public perceptions of the dangers of nuclear proliferation, so that the reactor consumed more plutonium than it produced." Another way of disposing of surplus plutonium - which is more popular in the west than burning it in fast reactors - is

to combine it with uranium and burn the resulting "mixed oxide fuel" or Mox in PWRs. IPPE is putting the final touches to a new facility to test Mox fuel elements, But Kochetkov does not hide his reluctance to go down the Mox road: "The IPPE directorate believes it is more profitable to use the plutonium in fast reactors.

Outside observers believe the Russian nuclear expansion programme as a whole is far too grandiose to be practical. Russia itself could not possibly raise internally the tens of bil-lions of dollars that would be required to carry out the plans on the scale proposed; western donors are far more interested in making the existing Russian nuclear industry safe than investing in its expansion. Yet a severely reduced version of plans might be credible - and even that would be the envy of the stagnant western nuclear

Meanwhile, the fragmented Russian industry, with its

many duplicated facilities, is forced to compete within itself for scarce orders and funds, both from within Russia and from the west. The main competition for IPPE is the Kurtchatov Institute, the nuclear development centre in Moscow.

submitted to the European Bank for Reconstruction and Development in London for \$45m to build a nuclear safety centre at Obninsk. The proposed centre - a joint venture between IPPE and Rockford Technology, a Canadian com-pany based in Vancouver would concentrate on training the operators of Soviet-designed reactors, using the latest techniques of computer

"The buman element is the weakest link in Russian nuclear safety," says Mark Pre-las, a nuclear engineering professor at the University of Missouri in the US, who is a

regular visitor to nuclear plants in the former Soviet Union. "The most economical way to improve safety by an order of magnitude is to pro-vide a standard training programme for engineers and operators of power plants. Russia currently has no such stan-dards because the industry is so fragmented; there are well-trained groups but no overall

try inevitably has mixed feel-ings about western safety con-cerns. Most of the engineers who designed the current generation of reactors remain prond of their work and believe western anxieties are greatly exaggerated. At the same time they are keen to take advantage of those fears to attract western funds.

The Russian nuclear indus-

While the industry waits for large-scale western aid to pay for safety improvements, it is beginning to sell its services abroad. For example, radio-iso-topes for medical diagnosis and treatment are in short supply in the west, following the clo-sure of many of the research reactors that used to produce them in the US and Europe: Russian reactors such as those at IPPE are now making up the

shortfall. "Our income from abroad has grown three to four times over the past year, with very beneficial contacts for the institute," Murogov says. "The mentality of our scientists has had to change drastically, for the first time in their lives they have to think about the application of positive results." Not all the foreign business

goes directly to the stateowned nuclear institutes. Some goes to the private companies being formed by their staff. IPPE, for example, has spawned Brand Engineering, named after the Brothers Androshenko who founded it, which is selling computer pro-

grauming services.

IPPE plans to continue running its first nuclear reactor until its 50th anniversary, if the passes a thorough safety review scheduled for 1997. It remains to be seen whether NP-1 will still symbolise the power and continuity of the Russian nuclear industry early in the next century, or will seem then like a quaint histori-

Worth Watching · Clive Cookson

Science research unit for RHS

The Royal Horticultural Society, best known for its flower shows and gardens, is to form a substantial cientific research department. The RHS has appointed its first chief scientist, Sarah Ball, and plans to build a new Centre of Horticultural Science at its main garden, Wisley, in

Ball, a plant pathologist, wants to re-establish the worldwide scientific repotation that the RHS enjoyed in the 1920s and 30s. By the early 1990s it was devoting only 3 per cent of tts income to science. The long-term plan is to increas that to about 10 per cent -giving Ball a budget of more than £1m a year. RHS scientists will focus on issues of particular interest to RHS Wisley: UK, 0483 22-1234

Energy traders get integrated

Oil and gas traders, who have had to work with a proliferation of on-line nformation sources, can now

combine them all in a single Saladin, a UK-based energy information company, this week launched Crus software product design to integrate real-time market sources and prices with historical data on one

Integration in this way offers two main advantages. First, the trader's office becomes physically less cluttered. And second, the combined terminal can carry out data analysis, including forecasts of inture price movements, which would be much more difficult with individual sources.

Similar software exists to integrate the mainstream financial information sources, but Saladin says that energy trading stands out for the sheer number of different sources available.

Crusader will cost about £2,000 a month for a five-user Saladin: DK, 0932 243233.

Portable message from the heart

A portable heart monitor developed by Colby Medical, a small UK company, will make it possible for family doctors and health clubs to screen large numbers of people for signs of heart

The Colby 1907, powered by rechargeable batteries, gives a wide range of electrocardiogram and oth respiratory and heart readings, similar to those from an ECG machine at a

specialist clinic. Readings

can be downloaded to a personal computer or sent by telephone to a specialist for a second opinion. The cost to the end-user is under £1.000. Colby Medical: UK, 0277 8/1171

Metal and bone join forces

It sounds at first like an nnlikely investment for a Japanese metals company: Kobe Steel's European venture capital arm is to take a 33 per cent stake in Promotus, a Swiss company developing a hio-material for bone implants and artificial hip joints.

But Kobe is itself a manufacturer of conventional metal hip joints and is attracted by the potential of Promotos's new material. Proplast. It is soft and extremely porous - made from an open matrix of PTFE
(a high performance plastic)
coated with hydroxyapatite
file influent in house

(the initiaral in bone).

The Promotos implant has a coating of Proplast over the metal stem that fits intothe central cavity of the patient's thigh bone. This has two advantages over conventional hard implants. it acts like a shock-absorber, allowing natural. "micro-motion" to take place in the artificial joint; and it encourages the body's own

into the stem and make it more stable London Oxford & Kobe Development Company: UK. 071 836 1225.

t the mid-summer point four years ago, the cracks in the prop-Lerty industry were only just emerging. New developments were still being launched, rents were rising and, despite the tightening of interest rates, many optimists believed the economy would

make a "soft landing". But whan the Gulf crisis broke out in the first week of August - the week I began to write about property for the FT - the cracks began to widen. Deals went on Ice, investors lost heart and the huge over-hang of bank debt threatened to bury the industry.

The years that followed were some of the most nerve-wrackmg seen in the industry. The downturn - the most damaging since the second world war - proved more severe than anyone had expected, crushing companies, ruining careers and costing banks and shareholders billions of pounds. The upturn, when it finally came last year, was frenetic.

The fall-out from the crash went beyond the property com-panies and the banks which lent to them. Company balance abeets were also weakened. towns were blighted by empty. boarded up property and the construction, architectural and surveying industries lost thousands of jobs. Even the Church of England cut stipends as a result of its investment managers' ill-fated forays into property development. It is no won-der the industry has a

tarnished image. But its fundamental importance - of providing commerce and industry with adequate

premises – has been obscured by its errors, chiefly the squan-dering of billions of pounds in unwanted developments.

The rigidity of the UK lease structure has also blighted many businesses, particularly small companies which discov-ered they were liable for the unpaid rent of companies to which they had assigned their leases. The tradition of lengthy leases, with upwards-only rent reviews, means that landlords are often seen as passive rent collectors rather than companies servicing their customers' needs. The government is examining the possibility of reforming the structure of

As an industry that hinges on deal-making, the property market revolves around its leading personalities. As a result the blame for the instability and short-sightedness of the industry rests largely with the way its foremost figures

A steely ambition and self-belief that is the essential characteristic of most property entrepreneurs resulted in too many speculative buildings in the 1980s. Developers, blinded

developments that have - the government now concedes -had a damaging effect on town

centres.
Banks, too, are culpable.
Driven by deregulation, the globalisation of the banking industry and the loss of corporate customers to the commercial paper and bond markets, banks poured money into property with an insufficient under standing of the risks.

Nor have mainstream property investors acquitted themselves with glory - with a few notable exceptions. While the UK institutions did well to shun property at the start of the downturn, they failed to appreciate the opportunities at the bottom of the market, leaving the best deals to some astute German investors. After property values began to increase on the back of rising bond values last year, UK insti-tutions re-entered the market, fuelling a sharp increase in

prices.

Despite its recent uplift, the property market lacks much of its old ebullience. The absence of rental growth is a worry. Banks are still wary of lending to developers. Property dealers are keeping a close watch on bond markets, which could yet

cause a nasty setback to parts of the market. While the unease in the market pales in comparison with the nervousness of 1990, the experience of the past four years has taught people that the sector can be unexpectedly volatile. But how long before they forget?

A new editor, a new chief executive and now a new chairman. Dominic Cadbury, 54, executive chairman of Cadbury Schweppes, is to take over from Sir John Harvey-Jones as chairman of The Economist Newspaper, parent of the weekly business magazine which has just celebrated its 150th anniversary.

The Reconomist's new chairman is the latest in a series of boardroom changes at the group which is 50 per centowned by the Financial Times. Bill Emmott took over as edi-tor when Rupert Pennant Rea left to become deputy governor of the Bank of England and Marjoria Scardino replaced David Gordon as chief execu-

chief executive of ITN. Tha Cadbury family bave been shareholders since 1929 and Dominic Cadbury has been on the board since 1990. He will succeed Sir John after the agm on July 12. Sir John, who retires having turned 70, took over from Sir Evelyn de Rothschild, whose family owns 20 per cent of the company. Under Sir John's seven-year

tive following his move to be

Dumas, Chris London

tenure, The Economist's profits have risen by 50 per cent. Last year, the group increased its pre-tax profits by 22 per cent to £15m on the back of a 8 per cent rise insales to £121m. The average circulation of the weekly magazine rose by 9 per cent to a record 549,000.

|Jorsling in the hot seat

The London Fire and Civil Defence Authority has a new chair, Judith Jorsling, 44. A Labour councillor for the Lon-don borough of Newbam, Jorsling was previously the LFCDA's depoty leader; she is both the first woman and the first black person to become tbc anthority's leader.

The LFCDA is responsible for the work of London's 8 000 firefighters and administrative uniformed firefighters - and in the fiscal year 1994-95 has a central government-funded budget of some £255m.

Jorsling came into politics via a familiar route, through community-based projects in Brixton and later Newham assisting the self-development of disadvantaged groups, set-ting up a tenants' association, and eventually becoming a Newham councillor in 1986. The LFCDA comprises representatives from each of London's 32 boroughs, plus one from the City.

Jorsling says she feels "extremely honoured" to have been chosen for the position. "So often in politics you find yourself wanting a certain position or function - it's very nice to be chosen by your colleagues for something as important as this."

The slowdown in the surge in property prices that began in late 1993 has been underlined by a second consecutive monthly fall ta the IPD Monthly Index

The total return for May was 1.2 per cent, the lowest monthly level since August last year. Capital growth was down to 0.5 per cent in May, the lowest monthly movement since April 1993 when yields started to shorten.

Over the past three months, the total return was 6.1 per cent, suggesting that the total return for 1994 is likely to be lower than the 7.8 per cent recorded in the quarter to March.

Total returns continued to slow across all three sectors in May reflecting a decline in to April.

the rate of capital growth. Industrials regained their lead as the best performing sector in May with a total return of 1.4 per cent. Retail property slipped into

second place with a return of 1.2 per cent, while offices showed a monthly return of 1.0 per cent. In the year to May, the total

return for the retail sector was 27.4 per cent, an increas of 0.8 percentage points over the year to April; the total return for the office sector was 25 per cent, a marginal improvement over the 24.7 per cent return for the 12month period to April; the total return for industrial roperty was 26.8 per cent for the year to May, compared with 25.8 per cent for the year

Wm Low loses property director cent in the six months to mid-

> Other recent gloom has been a 10 per cent cut in head office staff, and a decision to scale back plans for new retail space, from the intended 80,000-100,000 square feet per annum to not more than 40,000. Traditionally strong in Scotland, Low responded to the

down" promotion.

Perhaps it is not surprising therefore that yesterday Harvie Findlay, finance director, would add nothing to the company's formal statement about Johnson's departure, which noted that "bearing in mind the reduced level of activity in property develop-ment in retail and non-retail assets, no successor is being appointed in the meantime",

THE BRITISH BUSINESS PARK

NAME COMPANY **ADDRESS**

Alan Cane reports on the popularity of a controversial business tool in the UK

Re-engineering's all the rage

majority of the UK's large companies claim they are already in the throes of business process re-engineering, the iconoclastic technique which promises ambitious performance improvements for companies mance improvements for con prepared to imdertake the drastic changes involved.

In essence, BPR involves rethinking the way a company does business - or any part of its business - from the beginning, cutting out unnecessary stages and using infor-mation technology where appropri-ate to improve efficiency. It is necessary, management experts say, to give the improved performance nec-essary to remain competitive.

There are substantial risks involved - it can be likened to rebuilding an aircraft in flight - so veys, carried out by the Cranfield School of Management, and by the management consultancy Price Waterhouse in collaboration with the Financial Times, indicate separately that between 60 and 70 per cent of big companies claim to have undertaken, or are about to undertake, BPR. Even more surprising, only 7 per cent in the PW/FT survey saw it as a leading cause of busi-

ness instability. The surveys indicate that IT directors may be enjoying a new

t was seven years ago that a group of senior executives first recognised British Telecom's need to introduce what has become known as "process manage the replacement of activities fragmented between departments, businesses and geographic units by processes which span them. But the UK telecoms giant is still having mixed success with the

approach.

This is partly because of the scale of the changes required in such a large organisation. But there have also been other reasons. For several years, BT's efforts at what has now generally become known as "re-engineering" were piecemeal. Nor were they linked to a revised corporate strategy. Top management took until 1992 to throw its weight behind the principle that BT needed to be

re-engineered along process lines. Among myriad other barriers within BT, according to a new study entitled Re-engineering: The Critical Success Factors*, "process management" has not yet been

prominence after a spell in limbo when their projects failed to deliver all they promised. Now they seem to be working with their chief executives to define and push through

the changes needed for BPR.

Most of the companies canvasses said they were attracted to BPR because of the potential savings. The Cranfiald study, carried out

variety of business functions. listed cost reduction, cycle time reduction (doing things quicker) and improvement in customer satisfaction as the chief drivers. The PW/FT survey, an occasional poli of 100 chief executives, revealed that 79 per cent were looking for improved performance, while 35 per cent saw BPR as a means of cutting costs through,

the respondents saw it as a waste of time or effort and 24 per cent said BPR was essential to survival. Both surveys show that commit-ment to BPR from both the chief executiva and the IT director is

essential for success, but that support from the rest of the organisation is equally critical. The Cran-field study, directed by Chris

Ringing the changes brings mixed results

legitimised at BT by being integrated with the responsibilities and rewards of line managers. BT has also had problems combining two approaches to re-engineering: focusing on selected complete "core processes", such as the ordering and provision of private circuits; or re-engineering service components, such as customer relations.

BT's very mixed experience with re-engineering is one of several company case studies examined in the report from Business Intelligence, which looks beneath the considerable consultancy hype of the last 18 months and probes the practical experience of American and British companies which have been striving to introduce re-engineering. Other

Industries, Pilkington Optronics, Reuters, Rank Xerox and Western Provident Association, a UK health

The strength of the study is its

comprehensive scope, and the rigour with which, unlike many consultants and their clients, it is - or should be. Although "business process re-engineering" or BPR, has been dubbed "big people reductions" by some cynics - including within BT, which is slashing its workforce - the study stresses that it has little in common with conventional

restructuring or "downsizing".
As the study argues, re-engineering can only succeed when it is accompanied by changes in corporate strategy, management methods, behaviour and culture. Combined with these, it becomes what some consultancies call

The study distinguishes between two forms of re-engineering: what it calls "business re-engineering", which it defines as the - hitherto rare - re-engineering of entire businesses or organisations; and "process redesign", the narrower but still daunting reconfiguration of selected "core processes" which span departmental boundaries, such as order fulfilment and the development of new products. Among a useful checklist of "risk factors" in re-engineering, the study warns that the frequent failure to carry out a thorough

initial strategic review tends to

observed: "The rest of the manage-ment team needs to support the pro-posed change if it is to work."

There is evidence, nevertheless, that senior executives are not spreading their commitment to other staff: The organisation as a whole is barely aware of the exis-tence of BPR when compared with the senior management," according

to Cranfield.
It identifies this tendency for BPR to be seen both as an issue for senior management and, as an IT issue, as a substantial barrier to successful implementation.

indeed, 38 per cent of respondents to the PW/FT survay beliaved the chief executive had been the main architect of BPR while 28 per cent gave the credit to the IT director. One respondent to the PW/FT survey said: "It would be difficult for IT to drive BPR. It must be gener ated from within the operational ride of the husiness with IT provid-

ing support where possible."

A sound knowledge of the company, anergy and a willingness to take a fresh approach are clearly needed. Some 60 per cent of those credited with leading BPR in their companies had been in post from one to three years. Thirty-five per cent had been there longer but only 5 per cent had been in post for less

result in the re-engineering of processes which have a trivial impact on overall performance. Re-engineering is useless, it says, for an organisation which has products, services or a philosophy of business which are losing touch with market needs.

Although many consultancies claim that the definition of core processes is the easiest part of re-engineering, the report warms that it can be both hard and time-consuming. It is difficult to form an accurate view of how work is actually performed when formal procedures have been replaced over the years by informal ones, the study says. Yet a failure to define core processes correctly can lead to disappointing results, since it prompts companies to target too few or too many processes

Families' foreign assignments

Richard Donkin on the main issues when sending staff abroad

Roger is a senior manager in a large multinational energy company. A qualified petroleum engineer, his job had frequently taken him to many parts of the world but his withcreal isotype had not suitcase lifestyle had not interfered too greatly with his

His wife Ann, and three-year-old daughter, Bridget, were settled in their four-bedroomed house on a new estate near Kingston, Surrey. Today they are in a new home - a rented bungalow with

gardeners, a maid and a guard that is nearer Kingston, Jamaica. The posting was as sudden as t was unexpected. The job offer came and Roger accepted. Then ha told his wife. To say she was unhappy about the prospect of uprooting everything to start afresh in a different culture would be an understatement, but marital oyality overcame her resistance.

The move meant she had to give up her own job as an oil company geologist. Her position is less senior than Roger's but only, perhaps, because of her decision to start a family. And although Roger's posting is stensibly for two years, her company refused her request for a career break.

Roger is a big fish in his new job. His Caribbean island status, where he is frequently in the newspapers and mixing with government officials, is a world away from his previous life. But the letters home from Ann to her parents demonstrate that there is a cost - their daughter is not easily adapting to her new

surroundings. The difficulties associated with conflicting career paths of men and women are increasingly recognised as one of the bigg obstacles to international job transfers. A study by Monks Partnership, remuneration advisers, looking solely at job transfers in Europe, has found that pariners' dual careers are seen by their employers as the most common difficulty to overcome before transfers can take place.

An increasing number of companies are responding by providing career counselling for the spouse, says the report. Researchers discovered some examples of executives moving close to airports so they could commute to work abroad Companies tend to be against

splitting families because it often leads to assignment failures.

The greatest difficulties, says the report, arise when both partners have jobs of equal status. The survey, covering 1,000 work transfers among 30 multinational companies, found that employers put dual-career families ahead of children's education and language barriers in their perception of problems that

needed to be overcome. The results show a marked change from those in a similar survey last year which found that cost of living considerations dominated company concerns.

E

•

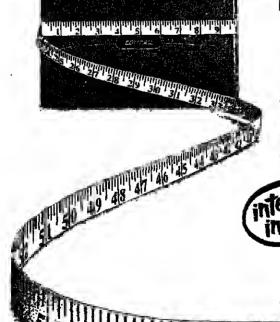

David Atkins, the report's editor, says: "As inflation has gradually been reduced in European economies the fear of rising prices and different costs of living in these countries has disappeared." The report found that 40 per cent of the companies were willing to assist with boarding school costs in the home country and, depending on the length of the assignment, more than 60 per cent of the companies surveyed would assist with day school fees in the new country.

Nearly all companies would pay for language training for the executive and 90 per cent would pay for lessons for the whole family. More than half the companies said they would also provide some cultural familiarisation training.

The findings are supported by recent research at Shell International which found that dual career considerations were a growing issue, particularly among amployees aged under 30. "The trailing spouse makes the sacrifice and all the satisfaction lies with the working partner, said Mike Coughley, a Shell human resources manager.

Gleam of gold from the tombs of the Greeks

Gerald Cadogan admires jewellery at the British Museum

or the next four months London offers an alternative gold sbow to the chunky, self-important British Crown Jewels. The pieces in Greek Gold: Jewellery f the Classical World at the British Museum are light, charming and intricate. And unlike the symbols of state the Tower of London guards, these gorgeous diadems, earrings, necklaces, pendants and wreaths have a human scale and constantly allude to Aphrodite, golden goddess of

The Metropolitan Museum of Art in New York, the State Hermitage in St Petersburg and the BM have combined the best pieces of their permanent collections to create a feast of Greek jewellery of 500 to 300 BC. They are micro-masterpieces of gold, mostly from the fringes of the Greek world. The special treat is the Hermitage collection of treasures from tombs in Greek cities in the Crimea and the north coast of the Black Sea which otherwise we must go to Russia to see.

The exhibition gives a new view of the Greeks, taking one away from Atbens and the familiar restrained emotion of classic Athenian art, Perhaps the Athenians had jewellery like this. If they did, we know little about it, apart from some in the exhibition from a tomb that Lord Elgin (of the marbles) had dug in Peiraeus. But on the whole the Athenians tried to stop people being bur-

ied with luxurious grave goods. That was not the attitude of the still developing societies at the edges of the Greek world, a diaspora that stretched from Spain to the Black Sea. Most of the pieces (which were generally acquired a long time ago) are from tombs. In the fringe regions women - and men -clearly believed that they could take all it with them and their power and prestige would last for ever. The Athenians would probably have said that this was a shocking abuse of capital which should be recycled to the children.

But conspicuous consumption in burial by an emerging society was a custom that had begun a millennium before with the gold found by Helnrich Schliemann in the royal graves at Mycenae (now a ellery comes from the rich Greek cities of the Crimes and the Cimmerian Bosporus, where the Greeks faced the

Scythians as friends or foes. Colossal wealth went with the dead, whether they were true Hellenes or natives adopting Hellenic culture. One man took his weapons and 13 horses with their bronze trappings with him. He also had silver and bronze vessels, two gold necklaces and gold costume jewellery – bull's and ram's heads, sphinxes and lions – for sewing on to his clothes or his shroud. He shone with gold.

The woman in another tomb had two large pendants, proba-bly worn on her clothes over her breasts. They are discs with the head of Athena Parthenos as designed by the sculptor Pheldias for her great temple on the acropolis of Athens, the Parthenon. An elaborate ivy-leaf border with green enamel filling and hanging wire scrolls and drops add office. But in the east Aegean they were more, following the habit of their non-Greek neighto the luxury.

The ivy was the plant of Dionysos. Oak leaves point to Zeus. One wreath from a tomb bours; and on the Black Sea they wore more still.

in the Dardsnelles has two The exhibition fills out the cicades among the leaves, and a bee to hide the joint where picture of what it was like to be Greek - beyond the images of Athenians erecting temples the wires which hold the leaves meet. But most alluand Socrates asking questions. Many Greeks clearly loved to dress up. Yet these jewels do not contradict the famous sions are to Aphrodite and the power of sex - not with the explicit scenes on Greek vases, but with a sophisticated deli-cacy matching the finesse of the craft – which tickles our Greek maxim, "Nothing to excess", because they are almost all miniatures. They imagination, just as it must have tickled theirs all those show how the top half of society could live, but they are not at all vulgar. The techniques years ago. Two earrings from Macedonia have the eagle carare a revelation, using she rying off the beautiful young Ganymede. The heads of bird metal, thin wire and tiny bob bles (granulation). Look closely and boy are so close that they to see how the craftsmen made are almost kissing, the claw of one bird resting lightly on straps by knitting many strands of wire, and hung pen-Ganymede's hip. dants of fruit or faces from the

In classical times, in central

Enamel inlays added colour, Greece men might wear a ring, and a wreath as a badge of as in a pair of loop earrings with pendants of women's beads which show - in minia ture - what they wore. In the hair is a high diadem like a tiara with relief palmettes and lotus flowers. Rosette shaped earrings are in the ears, the petals picked out in enamel.

> gold beads with a pendant in the shape of a bull's head. If you enjoy the show, the next stop should be the Thessaloniki Museum in northern Greece where the jewels from the royal graves of the kings of Macedonia found over the last 20 years are a yet more stun-ning display. They may be crown jewels, but they show the same traits as the jewels in this gem of a show at the BM.

And around the neck is a

choker of a doubla strand of

Cartier has linked itself to these masterpieces of ancient craft and sponsored the show, winning a further £25,000 for it from the Business Sponsorship Incentive Scheme. The uncrowded display of the gold on purpla cloth would grace any expensive jeweller's. The catalogue by Dyfri Williams and Jack Ogden is as superb as the jewels themselves.

Greek Gold: Jewellery of the Classical World at the BM until October 28; Metropolitan Museum from December 1-March 23, 1995; the Hermitlogue: £16.95 paperback (£14.95 during the exhibition) and £25.00 hardback.

Anthony O'Donnell, Ron Cook and James Bolam in a new production of Mamet's 'Glengarry Glen Ross' Theatre/Martin Hoyle

The American dream distorted

ut there is a man's world where a man has to do what a man has to do. The last surviving wilderness. A desert place where you walk tall and lean and only the strong survive. Eleven years after its premiere at the National Theatre, Glengarry Glen Ross returns to London; and in Sam Mendes' production at the Donmar Warehouse in Covent Garden it emerges more clearly than ever as a sad, half remembered distortion of a great American ideal: a dream, if not the dream, of independence and toughness, individual self-fulfilment in a territory bristling with

Can it be that what the Western genre once epitomised for the American male has been sublimated into ruthless commercial competition, and somathing as ignoble as worthless real estate selling? Yes, according to David Mamet in his most successful play.

That may be pitching it high, but the play's language gives off the sweaty-leather crackle of machismo illuminating

or his new ballet,

which I saw on Tues-day, Ashley Page has

the American minimalist com-

poser John Adams. Its title, which Page also uses, is Fear-

short time in its company, it is

tempting to call it Feorful

Monotonies. Like so much minimalism, it wears its clock-

work mechanism on its sleeve.

Round and round go the wheels. Click, click go the little

patterns. On and on go the gear changes, as incidents

wear themselves out and are

replaced (but oh, how labori-

ously) by other dull activities.

It is the musical equivalent of

the Chinese water torture, and

Ashley Page has made six

large works, and many smaller

pieces. In Pursuit and Carmen Arcadiae, which I thought his

most assured and convincing,

he revised academic classicism

by sharpening its accents, hon-

ing its cutting edge. The dance was bright, clear. In this new

work be brings to the stage

certain recognisable qualities:

an interest in revising balletic

vocabulary, and an affection for painterly (modern;

abstract) design which echoes

his creative taste.

it serves its choreographer ill.

turned to a score by

es. After a ver

a set of values where the ultimate terms of abuse are "fairy", "woman" and "f-ing child". For all its rhapsodically streamlined profanity, Glengarry is a wistful work, whose tawdry characters yearn for vast horizons to explore and sunsets to ride into once manhood has been tested and proved.

Instead of the purple sage these men act out their destinies against the Chinese res-taurants and cocktail bars of Chicago. Johan Engels's design uses the old warehouse's brick wall to suggest the entrapping city as the real estate salesmen thrust, parry, miss, strike home, and occasionally communicate at the restaurant-table of the opening scene, slowly revolving, as if a film camera was circling them with scientific detachment.

The American dream of the masculine and the individual has shrunk to the desperate rivalry among land dealers, not far removed from con-men as they sell worth-less land to the old and gullibla, vying for the bonus, the car, the vacation; or, even more desperately, to hold on to the job.

This production strikes me as funnier and less intense than the original. Perhaps the language has less of a bulldozer impact, perhaps we have become more cynical about the ethics of market forces; either way the plot of paranoid conspiracy is less shocking than it was. The cast is British, accomplished and slightly lightweight which adds to the play's emergence as a comedy, albeit a comedy set in the

James Bolam, more Irish than American, as the salesman going over the bill to find a precipice on the other side, changes brilliantly from cock-a-hoop champ to aghast failure, his face sagging blankly in defeat. John Benfield's thicky is a little too dumb to have survived so long in this jungle; but Ron Cook's smooth-talking conner, spivvy and plausible, is a convinc-ing golden boy of the soft sell. Only his lack of stature detracts from his fits of

Gold pendant disc with the head of Athena

'Prodigal Son' marks Kent Opera's return

t is five years since the Arts Council decided to close down Kent Opera by withdrawing its grant, but some companies refuse to take their final curtain. Its founder Norman Platt is determined to keep the company name alive. even if it meane starting again from

He intends to keep up pressure on the Arts Council for a new grant, but in the meantime has raised the finance for a rebirth of Kent Opera from other sources The list of contributing organisations, public and private, including local authorities and charitable trusts, is too long to list here. The sensible decision on Platt'a part was to have chosen for his relaunch a modest work that could be mounted on a

Britten'e Church Parables involve just a

ful of singers. They are a favourite with small-scale opera companies who can per form them in churches without the need for any scenery, but for some reason the third of them - The Prodigal Son - has been neglected at the expense of the other two. Kent Opera has been touring it around the English summer festivals and arrived this week at the Spitalfields Festi-

val in East London. In its heyday the company mada a name for itself enticing young theatre producers into the world of opera (Jonathan Miller and Nicholas Hytner were among its recruits). Platt wanted to continue that tradition and chose Tim Carroll from the Northcott Theatre in Exeter for The Prodigal Son. What be did with the piece took it a long way from the Japanese Noh-play

small band of instrumentalists and a hand- formality that Britten had in mind, but the result was strikingly theatrical.

> The performance was dominated by Howard Haskin as the Tempter, whose destructive force tears apart a family. Gwion Thomas sang strongly as the Elder Son. Alan Watt might have found more paternal warmth as the father, but James Oxley was affecting as the repressed younger son. Only Britten could equate the evil temptations that he faces with a chorus of boy trebles. Under Timothy Dean's musical direction this third parable made a vivid impact. While money is short, perhans Kent Opera might consider building up the complete trilogy.

> Spitalfields Festival continues until June

Ballet/Clement Crisp

Page's 'Fearful Symmetries'

Thus we have a stage deco-rated by Antony McDonald or rather, over-decorated. A backdrop blazing with thet crass magenta which bougainvillea spreads over half the walls in the South of France. A huge curved and pendant screen at stage left, the colour of which alters, but always drearily. A battery of lights at ground level, also stage left. An orange stick that makes a brief appearance. An acid green rectangle that unfortunately doesn't.

Lighting, by Peter Mumford, that unsettles the action by changing too frequently, and in the manner peculiar by William Forsythe, contrives to obscure the dancers. Gloomy costuming that succeeds through acutest malice in making the dancers look both ugly and foolish. The men boast mini-skirts (exactly the gear for Mukhamedov, one realises) and the women are in unflattering bodices and must also cope with fish-net tights that give their legs a curiously gnarled look.

Thus accoutred, thus chained to his score, Page plunges in the Forsythian deep end - much activity leading to further activity; a somewhat dėgogė, not to aay cursory, manner for the dancers - and dog-paddles for half an hour. The physical mood varies between pounding dynamics, with steps flung to the wind, and atrangely lethargic moments (as Adams' ecore draws breath) when the cast slump from active to passive

Mukhamedov comes off best. Page has devised a couple of outstanding entries for him which make much of his strength and his powerful phrasing - evarything seam-less, rich in tone, with great swathes of dancing cutting across th stage. Mukhamedov

also comes off worst by being involved in two duets - with Deborah Bull and Ann de Vos which are brutal in manner.

awkward in form. The rest of the cast, who are some of the best of the Royal are caught in tiny and inexplicable dramas, and look (thanks to their glum outfits) distinctly sooty. The piece struck me as rodomontsde. Over-decorated, overpowered by its score, the choreography has an air of anxiety, as if its brakes had failed. Page is an interesting choreographer, but he has been misled by his design and by his choice of score. His gifts need far more sympathetic sup-

The programme also contains early and late MacMillan. Danses Concertantes is as astonishing as it was in 1955 - classicism refreshed by the wittiest means - and Winter Dreams explores Chekbov's world with rare sympathy. The "farewell" duet for Masha and Vershinin was ideally done by Viviana Durante and Irek Mukhamedoy - their hearts spoke

This triple blll can be seen again at Covent Garden on June 28.29.30.

Redon in Chicago

Two major touring exhibitions have their only north American showing this summer at the Art Institute of Chicago.

Prince of Dreams is the first full-scale retrospective of Odilon Redon (1840-1916) to be held in the United States. It comprise more than 180 works by the French painter-poet, including etchings, lithographs, charcoal and pastel drawings, paintings, tapestry designs and decorative

Redon began his career with the Impressionists, before turning inward to explore the landscape of the imagination and the dream state associated with the Symbolists. In the last 25 years of his life, he moved from working almost exclusively in black and white to colour, Infusing his work with an intensity that gives it an almost hallucinatory vividness.

The exhibition, sponsored by Sara Lee Corporation, opens tomorrow and runs till September

18. before moving to the Rijksmuseum in Amsterdam (October 20-Jamsary 15) and the Royal Academy of Arts in London (February 22-May 21 1995).

devoted to Goya, arrives in Chicago next month from Madrid and London. It consists of 100 nati-scale paintings covering Goya's entire career, including sketches for major altarpleces portraits, self-portraits, cabinet pictures and miniatures on lvory. tt opens on July 16 and runs till

EXHIBITIONS GUIDE

AMSTERDAM

Van Gogh Museum Van Gogh'a Self-Portraits: 20 paintings and two drawings dating from his stay in Parts 1886-7. Ends Oct 9. Daily Ritiksmuseum Flowers and Plants: flora and fauna in five centuries of prints and drawings. Ends July 31. Closed Mon BALTIMORE

Museum of Art Matisse Cut-Outs: a loan from the Centre Georges Pompidou in Paris. Ends Aug 14. Closed Mon

Altes Museum The Last Days of Humanity: 600 photos, posters, peintings and drawings illustrating artists' responses to the First World War, and including work by Beckmann, Kokoschka, Dix, Picasso, Chagall and Wyndham Lewis. Ends Aug 28. Closed Mon Museum für Indische Kunst Lost Empire of the Silk Road: 87 well-preserved pieces of Buddhist art from the tenth to 13th centuries.

Ends July 3. Closed Mon

COLOGNE Museum Ludwig The Unknown Modigitani: 240 of the 440 hitherto unknown drawings amassed by Paul Alexandre before 1914. Ends July 10. Closed Mon Josef-Haubrich-Kunsthalle Heaven and Hell in the Middle Ages: 200 paintings, documents and artefacts likestrating the medieval view of death and the

afterlife. Ends Aug 28. Daily ESSEN Villa Hügel Paris - Belle Epoque: an evocation of the period from 1880 to 1910 with paintings, drawings, posters, photographs, glass and furniture. Ends Nov 13.

FRANKFURT Schim Kunsthalle Goethe and Art: 300 paintings, drawings and sculptures, from antiquity till Goethe'e death in 1832, by artists such as David, Schinkel, Caspar David Friedrich, Claude Lorrain, Constable and Turner. Ends Aug

7. Daily LAUSANNE Musée d'Art Contemporain Contemporary Picasso: 80 works 1946-1971, including 30 paintings and a dozen sculptures. Ends Sep

Musée Olympique Miró: 41 sculptures covering his entire career, plus 13 prints from the 1960s and 70s. Ends Sep 4. Daily Fondation de l'Hermitage Zborowski's Painters - Modigilani, Utrillo and Soutine: 100 works conjuring the aesthetic favoured by the early 20th century Parislan art dealer. Ends Oct 23. Closed

Musée des Arts Decoratifs

Contemporary Studio Glass from Japan: 100 works created in the past two years by 23 artists. Ends Aug 14. Closed Mon

Hayward Gallery Bonnard at Le Bosquet: 80 works by the French painter who bought the Villa du Bosquet on the Côte d'Azur in 1926 and painted many of his greatest works there. Ends Aug 29. Daily (advance booking 071-928 8800) Tate Gallery R.B. Kitaj (b1932): retrospective of the American-born figurative painter who has fived In Britain since the 1950s. Ends

Sep 4. Dally Mariborough Fine Art R.B. Kita: recent pictures and graphics. Ends Aug 20. Closed Sun Victoria and Albert Museum Pugin A Gothic Passion: retrospective of the 19th century British designer.

Ends Sep 11. Daily National Gallery From Casper David Friedrich to Ferdinand Hodler, A Romantic Tradition -Paintings and Drawings from the Oskar Reinhart Foundation. Ends Sep 4. Daily Courtauld Institute Prints

Representing Poussin; an exhibition marking the 400th anniversary of the Influential French painter, and likustrating the various ways his art has been represented using various reproductive techniques over the past three centuries. Ends Aug 29. Daily

British Museum German Printmaking in the Age of Goethe. Ends Sep 11. Indian Paintings and Drawings from the Collection of Howard Hodgkin, Ends Aug 21. MADRID

Centro de Arte Reina Sofia

Gerhard Richter, 100 works by one of the key figures in contemporary German art. Ends Aug 22. Closed

Musica des Beaux-Arts Hans Arp: sculptures and drawings 1913-66 by the Alsatian artist who was one of the founders of Dada, Ends Sep 19. Closed Tues **NEW YORK**

Metropolitan Museum of Art

Petrus Christus: 22 paintings by

the 15th century Netherlandish

master, renowned for the jewel-like luminosity of his work. Ends July 31. Picasso and the Weeping Woman: 80 paintings and works 1940s. Ends Sep 4. The Annenberg Coffection of Impressionist and Post-Impressionist Masterpleces: 53 paintings, drawings and watercolours. Ende Nov 27. The Decorative Arts of Frank Lloyd Wright, Ends Sep 4. Closed Mon Museum of Modern Art From Manet to Picasso - Masterpieces from the David and Peggy Rockefeller Collection, Ends Sep. 8. British Drawings 1890-1990: the exhibition highlights the work of early modernists like Vanessa Bell and Jacob Epstein, and examines the influence of Surrealism on such artists as Henry Moore and Edward Burra during the 1930s and 1940s. The postwar section includes work by Lucian Freud and David Hockney. Ends Sep 13. Closed Wed Whitney Museum of American Art Edward Hopper (1882-1987)

and Jack Pierson (b1982): the latter

former, and placed them alongside his own work. Ends Sep 11. Joseph

has selected 20 works by the

Stella (1877-1946); more than 200 works by the American modernist. Ends Oct 9. Closed Mon Pierpont Morgan Library Armenian Manuscripts: 90 volumes make up the first comprehensive exhibition in the US of Armenian manuscripts dispersed after the massacres in Anatolia in 1915. Most are gospel books venerated in the liturgy of the Armenian church, ranging from the seventh to the 18th century. Ends Aug 7.

Grand Palais The Origins of Impressionism 1859-69. Ends Aug 8. Closed Tues Musée d'Art Moderne de la Ville de Paris Dutch Art of the 20th Century: the first part traces developments from Van Gogh to Mondrian, while the second focuses on ten contemporary artists. Ends July 17. Closed Mon (11 ave du President Wilson)

 Cartes musées available at all metro stations and museums, to evoid queulng at 60 museums including the Louvre, Musée d'Orsay and Versailles. VIENNA

Jüdisches Museum Max Oppenheimer (1885-1954): retrospective of one of the most neglected figures in early 20th century Austrian art. Mopp, as he became known, helped create an Austrian version of expressionism, participated in the first Dada exhibition and was forced by the Nazis to emigrate to the US, where ha died almost forgotten. Ends Sep 18. Closed Sat Kunstlerhaus Art and Dictatorship: an exhibition comparing Hitler's. Stalin's and Mussolini'a Ideas of

degenerate art in paintings and

sculpture. Ends Aug 15. Daily Museum für angewandte Kunst Tyranny of Beauty: e study of the wedding-cake architectural etyle of Stalin's era and the reconstruction of Moscow. Ends July 17. Closed Mon

Kunsthalle Rebecca Horn (b1944): retrospective of the German artist, concentrating on her sculptural work from the past decade. Ends Aug 7. Closed Tues WASHINGTON

National Gallery of Art Willem de Kooning's Paintings: 75 works by America's influential abstract expressionist, Ends Seo 5, From Minimal to Conceptual Art - Works from the Vogel Collection: 90 drawings, photographs, paintings and sculpture by contemporary artists, including LeWitt, Christo, Ryman, Beuys and Flavin, Ends Nov 27. National Museum of American Art Thomas Cole: 70 works by the father of the Hudson River school of painting. Ends Aug 7. Mary Vaux Walcott: 50 watercolours by the early 20th century naturalist, explorer and artist, Enda Aug 29.

Freer Gallery of Art Masterpieces of Chinese Calligraphy: more than 30 calligraphers are represented from the first century BC to the 20th century. Ends next Feb. Daily Phillips Gollection The Drawings of Stuart Davis: 90 watercolours, gourches and drawings of radiant colour by the American modernist. Ends Aug 28. Daily

Two years ago he lost his largest customer. Under pressure from the bank, he agreed to pay £18,000 to a large firm of accountants to write a report assessing the viability of the business. All sides agreed that the company should continue trading and that the position should be reassessed after six months, during which time the accountant was paid more than £3,000 a week to monitor the company's financial health. Six months later, the over-

draft bad been reduced to within a few thousand pounds of the owner's forecast. But repeated restructuring proposals from him and his independent auditors were rejected by the bank and the accountants. Instead, the bank appointed the accountants as receivers

Underlying the story - and others like it - is an issue that concerns many directors and a number of financiers and accountants: whether accountants hired by bankers to investigate a financially tronbled company should be appointed as receivers?

The debate concerns a potential conflict of interest. The accountant may have a financial incentive to slant the advice given to the bank to suggest a company cannot be salvaged under existing management. By recommending that receivers be appointed, it stands a high chance of winning the work itself and generating extra fees.

Those most affected - company directors - are generally unwilling to be identified: often a company's bank loans are secured against their personal assets even after the companies have collapsed.

One exception is Mr John Jackson, chairman of Brown & Jackson, owner of the lossmaking Poundstretcher retail chain recently rescued by the South African retailing group, Pepkor. He calls the practice "objectionable" and has demanded an inquiry by the Bank of England and the

accountancy bodies. Some smaller accountacy firms are sympathetic to his viewpoint. "How can a firm be seen to be objective when reporting to a bank on whether a business is a going concern if a negative report will provide

For what we are about to receive

ness?" asks Mr Michael Snyder, senior partner at accountants Kingston Smith.

He says his firm does not conduct any insolvency work because he believes it does not "sit happily" with its work as investigating accountants. "What is required is a wholly independent review. The investigators appointed [from large firms] are most likely to be insolvency experts with the prospect of a future receivership in their minds."

These charges are vigorously rejected by those from the larger firms involved in conducting investigations, which win most of the work from the banks. Mr Allan Griffiths. a partner with Grant Thornton and vice president of the Society of Practitioners of Insolvency, the leading trade body. says: "It's a bit hard to stomach people doubting my professional integrity. I get my enjoyment from saving companies, not closing them down."

He argues that most of the companies he is asked to investigate emerge intact with existing management, and with creditors none the wiser.

Moreover, he says, finding a second accountancy firm to act if the first firm calls for the appointment of a receiver would add to costs because the new firm would have to learn about the company. In the meantime, as word leaks out, the value of the assets to be sold may also be substantially

Andrew Jack on tensions over the role of investigating

accountants

by many banks. Mr Brian Clare, head of Midland Bank's loan management division. says: "The argument is perceived rather than real. If banks have a weakness, it is allowing companies without a future to carry on and throwing good money after bad. I would never accept a recommendation to appoint a receiver if there was any better

Weighing up the merits of each side of the argument is difficult because the circumstances surrounding a receivership are rarely clear cut. Comnany directors often have a vested interest in slanting their story to conceal their own poor management, while bankers and insolvency practitioners are precluded on ethical grounds from breaking confidentiality to tell their side of

the story. Banks remain split on the issue. But an indication that there is a potential conflict of interest is shown by the decision of the Royal Bank of Scotland to reorganise the way in which it handled companies in distress over the past two years. It introduced a policy banning the investigating accountants it appoints from becoming receivers, except in exceptional circumstances

Mr Derek Sach, director of specialised lending services at the bank, says: "If customers perceive that investigating accountants will become receivers, they are unco-operative and resist intervention by the bank."

In the past two years, Mr Sach has reduced the number of people authorised to approve receivership from 300 to effectively three. Companies in distress are all handed to his specialist team. He says the result has been to reduce the number of receivers appointed by the Royal Bank by more than its competitors - even taking into account that the number of business failures in the UK has also dropped during the period.

But the Royal Bank's move is unique. The last time the accountancy profession's joint ethics committee studied the issue of investigating accountants acting as receivers was two years ago. It decided to take no further action, although 30 per cent of those asked believed that there was an actual and not just a perceived conflict of interest.

Mr Jackson thinks it is time for the accountancy profession and the Bank of England to examine some cases of business failure in detail to decide whether there is a case for stronger regulation.

Families by male order

government's think-Some of his darker thoughts should never have heen

uttered. They constitute xenophobia at worst, demagoguery at best. We will not dwell on this today. His lecture on Monday was free of the tiresome infelicities that sometimes mar his platform oratory. The tran-script I have is fit for decent discourse. That is just as well. The secretary for social security was addressing a diocesan conference. His topic was "the importance of the family". The sentiments he expressed were moderate, if a trifle wistful The family, he concluded, "will survive even the social revolution of our time".

Will it? In England and Wales, births outside marriage constituted 14.4 per cent of all infants born in 1982. The proportion rose to 31.2 per cent in 1992, according to official statistics published on Wednesday. That is lower than you or I might have guessed. Another wrinkle is that it is not necessarily teenagers who are becoming parents, unmarried or otherwise. Their fertility rate, expressed as the number of births per thousand women under 20, is higher than in 1982, but lower than in 1990. The same is true for women of all ages, but more so for the young. In 1992 the fertility rate

time. Against that, the younger the mother the less likely she is to be married when she The effect of this trend, plus the growth in divorce, is that some 2m children are being brought up by a lone parent, nearly always the mother. Mr

Lilley would like these chil-

for women in their early 30s

exceeded that for their sisters

in their early 20s for the first

dren to have fathers present in ble partnership. One is the the home. So would L So would most of the mothers, we must suppose, although that is less certain. The absent father has been the subject of much social research. My desk is littered with reports on the subject. Some, though not all, conclude that two parents are nearly always better than one. Some argue that one good parent can be better than two bad ones. Poor parenting, it is universally suggested, produces criminals and delinquents. Most of them, the crime statistics indicate, are young men aged between 15 and 25. This is not

a fresh observation. When I

was 19, I was arrested for trying to break into a Hatton Garden jewel harder. No wonder the family as the basic building block of box a good story. conthe That vinced court. ended that par-

ticular phase of Mr David Willetts, one of the pamphleteers, suggests that today's 15-to-25-year-olds "are the ones who are getting the unmarried women pregnant and whom the women - often understandably - have no desire to marry". In this he concurs, sort of, with Ms Sue Slipman, director of the National Council for One Parent Families. She alindes to young men who roam the streets being a public muisance, condemned forever to be "lads". Those who would reassert the authority of such men in the family, she said in a recent speech, "entirely fall to explain why any woman in her right mind would take one home with her".

Ms Slipman offers several reasons why more women are having children outside a sta-

increase in female amhltion. Women want careers as well as homes. Another is the disappearance of heavy industries that formerly employed unskilled young men at wages that enabled them to support a wife and family. Today's mothers are obliged to work because fathers are unemployed or earning too little to pay the bills. This has produced a "crisis of identity and role for younger men". The lads can no longer exert the power of the pay packet over their mates and offspring. "They appear to have gone to the other extreme of taking no responsibility for parenting," she

Mr

Lilley wants the wishes this was churches to try in the ministerial society, a bastion of freedom firing line. He against the power of the is talking sense at last state, the prin-

cipal channel through which culture, language, religion and values are transmitted to succeeding generations. Yet he confesses that politicians have very little power to strengthen the institution. "The idea that government could impose family values by edict or exhorta-tion is impractical and authoritarian," he said on Monday. He wants the churches to try harder. No wonder he is said to be in the ministerial firing line.

He is talking sense at last. According to Mr Lilley, governments can contrive to ensure that their actions do not discourage the mainte-nance of stable families. This should not mean cutting social payments to single parents. Between 1979 and 1992, he conceded, the real increase in benefits to lone mothers was 13

per cent, against 18 per cent

average take-home pay. So much for the myth that having a baby on your own pays better than marriage. The government is reviewing the rules for providing housing to homeless single parents, doubtless with latter. It is also persevering with the Child Support Agency, bravely maintaining the principle that fathers should accept financial responsibility for their children.

Quite right too.

Ms Slipman would like better sex education, something from which the government shrinks. Its third-rate ministers pretend to find straight advice distasteful and argue, absurdly, that information about contraception encourages young people to sleep with one another. No. The advertising and entertainment industries do that, in floods. Teachers can only add a drop. She also wants benefits restructured, more childcare provision, and an acknowledge ment that single mothers who work part time are needed at home by adolescents as much as toddlers.

Such ideas are the small change of today's politics, on both sides of the Atlantic. Education and training, which the Conservatives say they are providing and the opposition parties promise more of, may ease the pain, if we can wait. Other proposals float about, including a return to national service for school-loavers, and German-style apprenticeshlp schemes. Take your pick. We must learn to adjust our ideas and economies to the entry of most women into the workforce, and the simultaneous exit of so many young men. Getting that huge social restructuring right is the only serious family policy. The rest is wishful thinking, nervous tics as we conjure up fearful pictures of rootless young

Vision of gas liberalisation

Sir, In the current debate | will still control the entire about the liberalisation of the gas market in the UK, we feel that more beat than light has been generated. This has obscured the vision of the most likely outcome of the whole exercise: lower prices for all

gas consumers. Opponents of the government's plans to open up the domestic market have argued that this process will create a "winners and losers" scenario. Such arguments simply do not stand up to proper examina-tion. For example, we believe that any small regional price variations for domestic customers will be more than outweighed by the overall reduc-tions that independent suppliers will be able to offer. British Gas currently domi-

of more than 80 per cent, and transportation system when the market is fully open. To Ted Trafford, ensure self-sustaining competition, some simple steps need to be taken. First is the relatively straightforward legislation planned by the government. Second is continued downward pressure on the charges levied for use of the national gas grid

to reflect the real cost of operating the system efficiently. The liberalisation of the industrial and commercial market has already generated savings of up to 20 per cent. The introduction of competition in the domestic market should, similarly, deliver significant reductions in prices for householders. It will also underpin competition in all sectors of the market and pro-

nates the market with a share | vide the certainty to encourage companies such as ours to continue making the necessary investment in the gas business. Mobil Gas Marketing (UK) Richard Vernon,

Disastrous results if UN force were to be sent to Burundi

From Mr Martin Griffiths. Sir, Your perceptive leader

"Guilt trip to Rwanda" (June 22) accurately describes the pitfalls of sending French troops into Rwanda. It is clear that any intervention force in Rwanda must be seen as impartial by both the government force and the Rwandan Patriotic Front if a further

worsening of the situation is to

Instead, France should be putting its political influence and resources firmly behind the UN by supplying logistical support to the African troops of the UN mandated force to

We would, however, disagree with the point that "the UN

force in neighbouring Burundi delicate peace negotiations where further killings might appear to be bringing both yet be prevented". Burundi's fragile peace has been achieved by the positive steps taken by the acting president and these should be supported by both the British government and the international community. To send in troops against the wishes of the Burundian gov-ernment, and at a time when

appear to be bringing both Hutu and Tutsi together around the negotiation table for the first time in years, 6 could have disastrous results. Martin Griffiths, Actionaid. Hamlyn House Macdonald Road.

Argument on economic targets is back to front

From Professor Stanley Fischer. Sir, In his column, "Beware Ivy League central bankers" (June 13), Sir Samuel Brittan criticises the dependence of central bankers on academic economists "of the mainstream US Ivy League variety". As an example of the errors of lvy League thinking, he cites the argument in a paper I presented at the Bank of England's tercentenary conference, that an inflation target is preferable to a price level target. He exhorted readers and central bankers to treat mainstream economics sceptically.

Sir Samuel is right that mainstream economics should be treated with a large dose of scepticism, almost as blg a dose as is required for the arguments of economic columnists. And since MIT is not in the Ivy League, I could be persuaded of his views on lvy League economists if his other arguments made sense.

Unfortunately, though, Sir Samuel's column reveals a serious misunderstanding of the issues about which he wrote. To simplify the discussion, suppose that a central bank faces the choice between aiming for a constant price level,

target tries to make up for past failures to hit the target. Thus, if an inflationary shock in a given period raises prices above the target level, the central bank has to aim to reduce prices to get back to the target level. Or if a favourable price shock reduces prices in such a period, the central bank has to compensate by producing inflation in some future period. With a zero inflation target, the central bank lets bygones

be bygones, and aims to keep

the price level constant at

today's level.

Thus Sir Samuel gets it precisely backwards when he characterises a price stability regime as one in which prices are as likely to fall as rise, with the best bet being that prices in the distant future will be the same as they are today. That is true with a zero inflation target. It is not true with a price level target: under that regime, when the price level is below target, the future price level is most likely to be above today's level, and vice versa.

I discuss the choice between the two approaches in more or a zero inflation rate. detail in my paper. The choice At first glance, these targets of a price level target brings

seem to be the same. The dif-ference between them is that a central bank with a price level long run at the cost of greater variability of inflation in the short run. The greater inflation variability under a price level target results from the fact that every shock to inflation has to be followed by an offsetting change in the price level in the opposite direction.

I argue for the inflation rate target because I fear the consequences of having to aim to deflate the economy half the time, which is what the price level approach requires. Sir Samuel grandly dismisses this concern by describing my fear of deflation as extreme. This is armchair theorising of the worst sort. All economists know that it is theoretically possible to reduce prices through a pre-announced monetary policy, at no cost in terms of output. But that has not been done successfully in the post-second world war period; rather deflations and disinflations produce reces. sions. That has been so even for the most credible central bank, the Bundesbank, as the experience of the last few years confirms. That basic fact underlies my reluctance to advocate a policy that requires periods of negative inflation -

even though I recognise the theoretical possibility that eventually, perhaps, people will be willing to accept nominal wage cuts rather than fight them as they do now.

Lest all this sound academic, consider the example of Ger-many. The Bundesbank has a target inflation rate of 2 per cent. Over the past four years, German inflation has averaged 4 per cent, implying that German prices have risen by 8 per cent more than targeted during that period. The Bundesbank fought the inflation with tight money, and now, at the cost of recession. German inflation is close to its target range. That is regarded as a success; it is that success that permits Europe to begin growing again.

But under Sir Samuol's prescription, the Bundesbank would be only half done: it would still have to reduce the price level by an extra 8 por cent. That would be deflationary overkill, causing social costs to little positive purpose. Sir Samuel's argument does

not make sense. Staniey Fischer, Killian professor and head of economics, Massachusetts Institute of Technology.

Cambridge, Mass, US

are pleased to announce the establishment of

Emerging Markets CEO of the Year Awards

developed esser economies become emerging markets. Debt reschedulings are being replaced by debt underwritings. Equity is not about fairness in allocating multilateral funds, it's about ADRs listed in the American

public markets.

Against this backdrop, International Media Partners, publishers of Emerging Markets and parent company of the CEO Institutes, and INC Bank, the leading financial institution in emerging markets worldwide, have joined to establish two important new awards.

The Emerging Markets CEO of the Year Award will be given to two business leaders. The first will be the chief executive of a corporation headquartered in one of the world's emerging economies whose vision and company's perfor-

quartered in the developed world whose expansion into emerging markets has shown best how these markets can contribute significantly to corporate revenues and profitability. There are no industry or size criteria, though it is expected that the recipient of the award will be in charge of major business. The awards will be presented at

Democracy in the dark

The main issue facing the EU eummit in Corfu today is the choice of the next president of the Commission. It is an important choice, even if the successful candidate is unlikely to play the stra-tegic role that Jacques Delors did in the last 10 years. The Commission retains the sole right to initi-ate EU legislation. It also has the task of articulating the common interest of the Union as a whole a role which may be more important rather than less if the political initiative has now passed, as many believe, to national leaders. Within the Commission, that role will fall especially to the presi-dent, who this time has also been promised a say in the choice of his colleagues.
Choosing the next president is a particularly invidious task for the

European Council, since two of its own number are declared candi-dates - an unprecedented circumstance which shows how much Mr Delors' long tenure has raised the post's prestige. It seems unlikely that the council will be able to agree. The Greek prime minister, in the chair, is too isolated to act as an effective broker; and the German chancellor, though now clearly the effective leader of the Union, may have overplayed his hand in letting his support for Jean-Luc Dehaene become known in advance. To the positive sympathy enjoyed in some capitals by Ruud Lubbers is thus added a negative desire in others to resist the Franco-German steamroller.

So deadlock is quite possible. It may also be desirable. Its effect would be to throw the choice forward into the German presidency, which starts next week, obliging Mr Kohl to act as chairman rather than champion.

Worthwhile delay

He has said he would call an emergency summit at once, but he should think again. Too long a delay would indeed be damaging, given the need for the new president to help choose his colleagues. and for the whole team to secure parliamentary approval, before taking office in January. But a delay until early autumn would be well worthwhile if it were used to make a break with the current en tha process to public scrutiny.

Existing procedures are little

apparently believe that this important post can best be filled at a private horse-trading session among 12 individuals. In so far as they have allowed the public to know anything at all about their motives, it seems that the nationality of each candidate counts for much more than his personal merits or opinions, even though once chosen he would be expected to forswear all national favouritism Even more demeaningly, the top executive posts in other international organisations, including some which are far from being in the EU's gift, have been bandled around as bargaining chips, or as consolation prizes for nations which lose out in this unseemly

Radical ideas

If they were really concerned about the "democratic deficit", European leaders should allow the president to be elected either by the parliament or directly by the citizens of the Union. But such radical ideas would require treaty revision, and will have to wait at least until 1996.

For now, the council should announce its intention of recon vening to make a final choice in, say, late September. It should invite candidates - those already declared and any others who wish to be considered – to submit for-mal applications by mid-July. These applications should be made public, and should include a statement of the candidate's views on the future of the Union, on the role of the Commission and its president, and on the way in which he, or she, would propose to fill that role. They should be the subject of debate to the European Parliament, in national parlia-ments and elsewhere.

The council should also agree on a voting procedure, which might include an undertaking by all its members to accept the decision of a qualified majority, if unanimity is not achieved on the first one or two ballots; and all of them should promise to make their vote public along with the reasons for

If the EU's leaders are not prepared to take it even that far in a democratic direction, they growing Euroscepticism, or downright Euro-hostility, of their elec-

Laying the ghost of Mr Maxwell

A crucial test of the government's proposals for reforming the UK pensions industry is whether they offer adequate protection against crooks like the late Robert Max. well. Confidence in the security of occupational pensions was hadly shaken by the monstrous theft he perpetrated against pension scheme members in his business empire. Establishing a coberent regulatory framework for pensions is essential in a world in which private pension provision is becoming increasingly important in sustaining living standards in

There is, of course, no foolproof protection against the predations of a determined fraudster. Even trustees representing the interests of members can be intimidated into eilence, as Mr Maxwell proved. Yet by largely endorsing the recommendations in the report of the Goode committee on pension law reform, the govern-ment has shown itself determined to move towards a comprehensive and statutory form of regulation that will create a succession of obstacles to fraud.

In the front line of defence will be the members, who will be given better access to information on their schemes. They will also have the right to select a third of the trustees - a long-overdue provi-sion for those on whose behalf pension funds exist. The role of trustees is to be strengthened by clarifying their responsibilities and duties. Professional advisers are to be told that they are accountable to the trustees, not the amployer. The solvency requirements provide a further line of defence, with a full valuation required if the annual solvency report reveals an unexpected deficiency. An independent regulator will be appointed with powers to investigate and enforce schames' compliance with their statutory obligations.

Compensation scheme

Finally, a compensation scheme is to be established that will pay out if a fraudster succeeds in jumping all these hurdles. The scheme, funded by an industry levy, should avoid the heartbreaking uncertainties experienced by many Maxwall pensioners over their income to retirement. If there is any doubt over the large and important task.

reactive nature of the proposed regulatory framework. Scheme members will be entitled to request annual reports and accounts, but will not automatically receive them. Trustees will have to prepare an annual report but not file it with the regulator where it could be open for public inspection. The regulator will wait for whistle-blowers to raise the alarm rather than analyse scheme

Proactive approach

In most cases, this is less than what was recommended by the Goode report, which rightly favoured a more proactive approach. The committee wanted schemes to send annual reports to members in the same way as com-panies do to shareholders. It also proposed that schemes should make annual returns to the regulator that would have provided warning of potential problems. Indeed, the regulator could use such returns to identify et-risk chemes and initiate investigations in the same way as charity regulators and tax inspectors do. On one matter, however, the

government was right to water down the Goode report's proposal on the definition of minimum solvency requirements. Members need a simple indicator to judge whether their scheme has the resources to redeem the pension promises it has made to them. The government has opted for tha compromise proposed by the actuarial profession which values habilities on a mixture of equity-type returns and gilts-based returns according to the age profile of scheme members. This allows for a more diversified investment portfolio than implied in Goode.

All in all, this is a white paper which strikes the right note, though with inadequate conviction. The government would also be wrong to think that it can now relax about the subject of pensions. Changing employment patterns, changing capital markets and changing consumer prefer ences all suggest that the defined benefit occupational pension scheme is in decline. Creating a sound framework for personal pension schemes, given the recent record of mis-selling, remains a

Glendower: I can call spirits from the vasty deep.'
Hotspur: Why, so can I, or so can any man. But will they come when you do call for them?"

US Treasury Secretary, in the role of Glendower in Shakespeare'e Henry IV, Part One, and transform the majority of the industrial world's central banks into a collective Hotspur, and you have a rough idea of where the US stands in its efforts to rally support for the dol-

On Wednesday Mr Bentsen resorted to the first line of defence of any US administration when faced with an unwelcome fall in the value of its currency; he tried to talk the dollar up by emphasising the fundamental strengths of America's low inflation, tovestment led recovery.

By referring in addition to the

US's partners in the Group of Seven leading industrialised countries, the Treasury Secretary also tried to give the impression that international support for the embattled US currency was close at hand

But his declaration that "we continue to be in close communication with our G7 partners, and we continue to be prepared to act as approhope than a sign that the G7 leading industrial countries were ready to rally to the dollar's defence.

True, the Bank of Japan was again seen buying dollars in Tokyo after Mr Bentsen's remarks. But as trading in Europe drew to a close vesterday there was no sign of either the European monetary authorities or the US Federal Reserve Board stepping in to support the dollar.

In the mid to late 1990s, when currency manipulation by governments was all the rage, central banks seemed happy to defend each others' currencies at the drop of a hat. Nowadays, however, concerted intervention is a rare event and happens only on those occasions when there is a genuine identity of interests among the big industrial countries.

Although this week saw the US currency fall briefly through tha psychologically-important Y100 level, it appears that no such identity of interests exists over the dol-lar. The financial markets sense this lack of consensus, And although Mr Bentsen's words, backed by upbeat assessments of the US economy from President Bill Clinton and Mr Alan Greenspan, the US Federal Reserve Board chairman, sufficed yesterday to keep the dollar above Y100 in European trading, traders and analysts argue that it is only a matter of time before the authorities are again put to the

Spirits await a summons to action

The fluctuating fortunes of the dollar are testing the criteria for concerted intervention, says Peter Norman

"Round one is over. But round two is still to come," says Mr Neil MacKinnon, Citibank's chief currency strategist in London. The indecision of the central

banks reflects doubts over whether intervention could substantially affect the dollar's value in present market conditions and a wider uncertainty about whether the US currency's present weakness against the yen to particular represents a global problem. At the beginning of May, by con-

trast, when the dollar fell close to Y100, up to 17 central banks stepped into the market to buy the currency. Notable features of that intervention were the participation of the Bundesbank and the purchase of dollars, not just for yen at Y101.2, but also for D-Marks at DM1.6570. This week, although the dollar briefly dipped below the Y100 level, only the Bank of Japan has been supporting it.

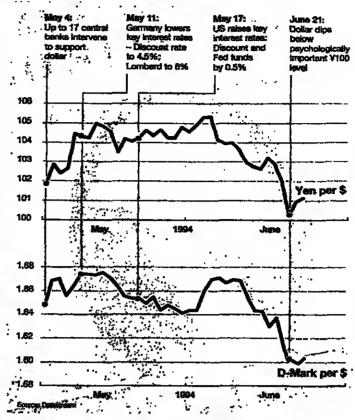

Seven weeks ago, the air was think with dire warnings that a fall of the dollar through Y100 would precipitate a free fall to Y25, Y20 or even Y80. In the trading session on Tuesday when the greenback fell through Y100 it managed to scram-ble back up above this "hig number" of its own accord.

The dollar'e apparent resilience may partly reflect a strengthening of economic fundamentals. Since the beginning of May, German interest rates have fallen while the key US discount and federal fund rates have been raised by half a percentage point. The effect of losses among the

lightly regulated hedge funds and the proprietary trading desks of investment banks may also be giving the dollar a respite. According to one senior analyst in London, speculativa investors could have lost as much as \$80bn of capital in this year's turbulent financial markets, reducing their scope to speculate by an estimated \$600bn. The non-appearance of concerted

intervention could also reflect changed circumstances in Germany and a perception among market operators that current market conditions are unsuited to such action. The outlook for economic recovery in Germany has improved considerably since the beginning of

US dollar takes a beating

May, when the Bundesbank stepped in to prevent the dollar's fall from undermining German exports. Although Mr Hans Tietmeyer, the Bundesbank president, said yesterday that he favoured currency stability "in principle", a somewhat weaker dollar could even be to Germany's advantage at precent because it would hold down the prices of imported goods and offset recent price rises for commodities including oil. By contrast intervention by the Bundesbank to support the dollar could increase inflationary pressures by boosting Germany's already rapidly growing money supply.

The technical state of the foreign exchange market is also thought to be restricting the enthusiasm of European central banks for foreign exchange market intervention. Intervention to support a cur-

when speculators have "shorted" it by selling currency that they do not have in the hope of buying it more cheaply when they have to settle orders at a later time. Intervention in these circumstances can force speculators to buy the currency to cover their positions, resulting in heavy losses.

According to foreign exchange market analysts, the market is not short of dollars at present. As a result, intervention would have to be on a large scale and concerted among many central banks and would still run the risk of being

There is little doubt that European banks would act, despite the

troublesome changes or give up

such an easy way of getting much

riske, if they felt their interests threatened. But viewed from Europe, the sinking dollar is more clearly a problem for the US and Japan – so far.

In Japan, a falling dollar threatens the country's exports. A drop in the dollar could spell trouble for the US if translated into further weak-ness and rising interest rates on the US bond market.

But whereas Japan, as shown by central bank intervention, is clearly taking its predicament seriously, policy makers in America's G7 part ners are uncertain about the true depth of Washington's concern

eflecting these doubts Mr Hideaki Kumano, a vice minister at Japan's Ministry of International Trade and Industry (Miti) yesterday said "the US itself should defend the dollar". The US Federal Reserve is thought to have bought dollars on behalf the Bank of Japan in recent

days. But there has been no sign of it supporting the dollar on its own Indeed to some observers, the involvement of President Clinton in talking up the dollar and Treasury secretary Bentsen's statement of

Wednesday smacked of a short term reaction to domestic US headlines about Tuesday's fall in the dollar to a post Second World War low against the yen.
Scepticism about the US stance

was not eased by suggestions that the US Treasury had been irritated by President Clinton's announcement that It would be making a statement on Wednesday. The Idea that Mr Benteen's had been bounced into premature comment was given some support by the low key references to the G7 in bis terse two paragraph statement. His remarks were widely interpreted as a sign that the US had at that point failed to win over its partners to a policy of dollar support.

Such perceptions could bode ill for the stability of the dollar in the days and weeks ahead. Speculation often builds up ahead of hig setpiece international events such as the economic summit of G7 leaders to be held in Naples between July 8 and 10 while the unresolved trade dispute between the US and Japan and could easily foment another bout of market turmoil. Although the central banks have

so far been absent as a concerted force in this week's dollar trading, it is a fair bet that the US will be trying to secure an agreement on concerted intervention should this prove necessary. But to win the support of its trading partners for such a move, the US administration will have to demonstrate that it is prepared to act in defence of its own

Water companies' income dilemma

industry sees itself as being only weeks eway from an almighty crunch day of decisions. At PERSONAL Office of Water Ser-VIEW__ vices (Ofwat), the

industry regulator, is due to announce the so-called "k"-factors. These will set limits for increases in water and sewerage charges for five or 10 years ahead, taking into account the rate of inflation at the time. As some 30 companies are involved, and the increases are to be applied annually, more than 300 figures will be published in one day. This process sounds more like the work of committed bureancrats than any kind of proxy for competi-

The procedures have two faults (quite apart from there being possible leaks to the stock market of information on prices which each company will have had in confidence since May). First, customers have little chance to understand what goes into the decisions - how much of the prices are to finance

The UK water future investment and so forth. Publishing one part of the price increases 10 years ahead will worry and confuse some customers, with-out there being either a reliable forecast (no one knows what future inflation will be) or a necessary safeguard against monopoly abuse. If anyone is helped, it will only be the company planners and City investment analysts trying to second-guess the regulator's estimates of future profits and the effects on water share prices.

Perhaps a greater fault is that this procedure over-dramatises the work of Ofwat, to whose beavyweight style of regulation the companies are paying too much attention anyway. This probably increases isolation of the companies from the main body of customers, who still worry about water quality. dirty rivers and polluted beaches (according to recent surveys) as well as about future water bills. Ofwat tells the companies to consult customer opinion. But such a process does not inspire much confidence given that the companies operate on the basis of bills being paid in advance calculated on a tax

The reason? Opposition parties

basis. The companies are not widely respected, being seen as monopolies that pay their top brass what seem extravagant commercial salaries. However, their worries ought to

lie in a different direction. When former prime minister Mrs Margaret Thatcher was hatching her poll-tax scheme, she wanted to erase the old rating system from the public records and householders'

Neither the water companies nor the City should make too much of Ofwat's decisions

memories. The water industry had long depended on it, however, as a second-hand, low cost way of fixing water bills for 18m households. So Mrs Thatcher had a law passed in 1988 (before the main water privatisation in 1989) to make it illegal to base water bills on any system derived from old rateable values after the year 2000. But the privatised companies, reluctant to face

of their income, have put less than 10 per cent of bills on any new basis so far. They have therefore to deal with about 16m households of all sorts in the five years remaining. For the industry, this has been like a time-bomb they have left ticking away. A few companies see

metering as the way forward, but want to stretch out the change and fear the cost. Others still hope to climb aboard the council tax system instead. But this is riddled with rebates and exemptions which they will not want to concede, and they cannot hope just to pick the parts of that system that suit them. The oddest idea being considered is a flat-rate licence fee in some areas, hringing some large increases or reductions in bills, still quite unrelated to usage.

However, the essence of a utility business is that it should be paid according to the volume of its service to customers. This is to line with the the National Rivers Authority's insistence that water resources need to be conserved in some parts of England, and that new charging methods could and should promote that.

So neither the water company managements nor the city analysts should make too much of Ofwat's July decisions. Their worry should be that, as the companies invest in providing better services, they still have in prospect no settled long-term way of calculating bills and gathering their money from the mass of domestic customers. They have only got five years to solve this problem and, more important, to explain their solution to the customers. They cannot blame the present government for this. Explaining new charges is e task that the industry has left very late.

Lions won their match. Nevertheless, Cameroon qualified, a holiday was duly declared, the strike threat was defused - and Biya survived. Who knows what the outcome this time round might be - for soccer or politico stars.

Doppelgänger

■ What do Sir Leon Brittan, Peter Sutherland and Rund Lubbers have in common – other than the prospect of losing out to Jean-Luc Dehaene? There is an uncanny physical resemblance linking them: all three possess a fine pair of bushy eyebrows and each has a

thick thatch of hair swept low across their foreheads. By contrast Dehaepe slicks his hair back to reveal some inches of temple, wears glasses and has no eyebrows to speak of. And who should he resemble in those three ways? The outgoing president, Jacques Delors.

Not tonight ■ No great headaches for analysts

trying to work out the logic of the latest alliance in the burgeoning international healthcare business. Glaxo, the Goliath of European drug production, is buying research from a Californian David, the 10-strong biotechnology company Spectra. The research is into migraine; among the millions of offerers are none other than Sir Richard Sykes - Glazo'a chief executive - and Steve Peroutka. Spectra's president.

Final puff

■ Talk about public relations coups. David Wynne-Morgan, 63, first got into PR by writing a flattering piece about the late J Paul Getty. The oil tycoon was so impressed that he underwrote Wynne-Morgan's move into the game, becoming his first client at 5 guineas an hour. Claus von Bulow

later inherited the Getty account. Now Morgan has handed in his notice as boss of Hill & Knowlton tn Europe. He plans ending his

career by polishing the image of his favourite client, Peter Munk, the Canadian entrepreneur whose interests include North America's biggest gold mine, Clark Oil, and Berlin property.

All a bit of a come-down for one of London's veteran flacks? Not likely. Morgan gets a seat on the board of Horsham - Munk'e master company – a handsome wage and \$1.3m in share options. All for working 12 days a month for Munk; no doubt a well-earned rest.

Devilment

■ Those convinced that the relentless advance of satellite television spells the intrusion of evil, anti-religious programming, will be further persuaded by an ominous development on the roof of the Vatican's mission in Cairo. Embellishing the Holy See's

splendid Nileside villa is a large satellite dish, bearing in large red letters the legend "SATAN". Has Rupert Murdoch been informed of this latest player entering the market?

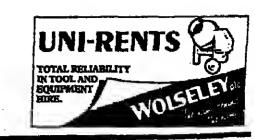

Virtue rewarded ■ Son: "Dad, what is 'business

ethics'?" Father: "That's tricky, but I'll give you an example. Suppose someone comes into our shop and spends £5, handing me two £5 notes stuck together. Do I tell your mother?

35 X

THE PORTFOLIO APPROACH Portfolio Fund of Funds is intended for the

cautious investor and aims to achieve maximum total return from a low risk international diversified portfolio of unit cruses. This gives it a very wide spread of risk, expertise across all the available sectors, and access to the City's best fund managers, each chosen for the area in which they excel.

The fund currently includes trusts run by Schroders, Fidelity, Gartmore, Lazards, Foreign & Colonial, Newton, NM, GT, Credit Suisse, Morgan Grenfell, Baillie Gifford, Guinness Flight, City of London,

Rothschilds and Perpetual. Over 50% of the underlying investments are in UK and other European Union

From launch in December 1989 to 1st June 1994 the value of units with ner income reinvested (offer to bid) rose 74.0%, the best performance over the period of any of the funds of funds monitored by Micropal.

Over other periods to 1st June 1994, performance was as follows:

4 years:	+ 71.4%	Ist out of 22
3 уеагь:	+ 68.2%	lst out of 30
2 years:	+ 55.5%	2nd out of 44
I year:	+ 27.2%	1st out of 59

Past performance is not necessarily a guide to future performance.

The fund minimises volatility through extensive diversification. It aims to avoid the sharp peaks and troughs of more specialised funds. It can serve as a complete portiolio of equity investment for riskaverse pension funds, trust funds and children's crusts as well as for individuals. All investors should however bear in mind that the price of units and the income from them can go down as well as up.

LOW VOLATILITY

THE LEX COLUMN

Securing Goode returns

Yesterday's pensions white paper strikes a sensible balance between the security of occupational pensions and the cost to industry of providing them. The minimum solvency test will probably lead to some shift of pension fund assets from UK and overseas equities into gilts. If lower investment returns result, companies will end up contributing more to their schemes over time. Companies also have to consider the potential cost of falling foul of the solvency test, since employers will be obliged to make up the shortfail within three months of the threshold being breached.

But that should not cause companies to walk away from occupational schemes. The government has defended the right of employers to claw back pension fund surpluses where schemes are over-funded. The solvency test proposed is far less strin-gent than the original Goode Commit-tee proposal. Due to nifty footwork by the actuarial profession, there is no reason to expect a stampede out of

equities and into gilts. Some fund managers will doubtless argue that schemes should be entirely free to pursue high-growth investme strategies in the interests of both members and employers. There is nothing in yesterday's proposals to stop younger, wealthier schemes from doing just that. But less well-endowed schemes cannot afford to take such investment risks. Heavy weightings towards UK and overseas equities are not always consistent with the degree of certainty sought by scheme members. If the balance can be righted in these cases without causing turbulence in financial markets - or driving companies away from occupational schemes - the white paper will have

Telegraph It is to be hoped that the gliterati who adorn the Hollinger and Tele-graph boards can muster sufficient resolve to demand some straight answers from their chairman. Hollinger's sale of 12.5m Telegraph sbares in May appears remarkably prescient considering the newspaper's later decision to shred its cover price. That news knocked 35 per cent off the Telegraph's shares yesterday. Those investors who bought the Hollinger shares are apoplectic. The stock exchange is right to investigate the background, Goldman Sachs and Cazenove, which facilitated the share placing, must also be musing whether the

FT-SE Index: 2942.4 (-18.0) Share price relative to the FT-SE-A All-Share index 1901

fees earned are worth the bad feeling that now surrounds their names.

The Telegraph insists the decision to cut the cover price was taken after the share sale. It can also argue that none are as blind as those who do not want to see. The market should have expected some aggression when the Telegraph's circulation dropped below in May. Mr Black made it plain at Hollinger's annual meeting - albeit, after the share sale - that "remedial action" would be taken if the Telegraph's market snpremacy were threatened. Bruised Telegraph share-holders will be little comforted by such arguments. The Times' vicious response to the Telegraph's move suggests that Mr Rupert Murdoch has a higher pain threshold than Mr Black. The newspaper industry will shudder at the thought that wars are much easier to start than they are to end.

TSB

On the surface, TSB looks a picture of health. First-half profits are up nearly threefold, net return on capital is 15.5 per cent and the tier 1 capital ratio is 9.1 per cent. The awkward thing is that recent growth has occurred in peripheral businesses which are supposed to be winding down. Thus both the bad loan admiriistration unit and Mortgage Express extended the recovery manifest in the second half of last year. Operating profit before bad debts in retail banking and insurance fell 5 per cent. That, unfortunately, is precisely the area on which TSB's longer term ambitions are focused. Nor is the outlook encouraging. The

process of shifting customers into

higher yielding deposits, which has been a drag on TSB's funding costs. may soon have run its course. But margin pressure looks set to intensify in the mortgage market. Life assurance and pensions premium income is dropping and conditions will become even tougher when commission disclosure is required next year. No wonder TSB is still talking about buying a building society. Acquisition looks the

only plausible route to growth.

As long as Lloyds Bank cannot even make a friendly offer for a building society work, though, there seems littie chance of TSB pulling off a significant deal. With its tier I capital ratio heading over 10 per cent as basi debt provisions drop further, it may soon have to start considering alternatives like a scheme to buy back its own shares. Otherwise competition may quickly erode its handsome returns.

C&W/AT&T

AT&T's international alliance has caused disarray in Cable & Wireless's caused disarray in Cable & Wireless's ranks. Mercury Communications, C&W's UK subsidiary, was almost sucked into AT&T's Worldsource grouping. Hongkong Telecom, a 57.5 per cent owned subsidiary, may yet join. All this puts a big question mark over C&W's strategy of maintaining its independent from the three big its independence from the three hig telecoms alliances formed in recent months. Its own plan is the form a "federation" by foultting together its multitude of stakes in telecoms operators scattered across the globe.

The spag is not simply that mem-bers of the federation are doubtful of its value. Investors attribute no value to it either. C&W is viewed like an investment trust, with the group's market £9.3bn capitalisation roughly £2hn less than the sum of its parts.

There are several ways C&W could realise greater value. One would be to demerge C&W into its constituent parts. Another would be to beef up the federation so that it becomes a serious fourth alliance. It is hard to see how this can be done without a more substantial presence in the US. long-distance market. There is not much left to buy and C&W could and up paying over the odds. Much when would be to do what Sprint and MCI have done and sell a minority share of itself to a foreign sugar daddy at a handsome premium. AT&T still looks the best candidate. But if the Baby Bells are freed to enter the US long-distance market as expected, they could play that role too.

chief executive, said: "There was a real problem in getting into bed with AT&T, given their existing

international partners."

KDD, the largest Japanese

Mr Rupert Murdoch last night stepped up Britain's newspaper wars by cutting the price of The Times by 10p to 20p, one day aftar the Daily Telegraph dropped its price to 30p. Earlier in the day, the London

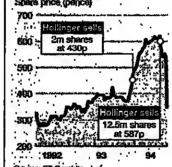

Stock Exchange launched an investigation into the circumstances surrounding the Telegraph's move, amid fierce City of London criticism of the recent share sale by proprietor Mr Conrad Black,

The Stock Exchange visited the Telegraph's offices where it was provided with documents showing the sequence of events leading up to the price cut.

Telegraph shares plunged by 191p to 349p yesterday, 40 per cent below the price at which Hollinger, the Canadian publish-ing group controlled by Mr Black, sold £73m (\$111m) of shares on May 19. The shares were bought by Cazenove, the Telegraph's stockbrokers, and Goldman Sachs, the US investment bank, which sold them on to institu-tions. The purchasers, nursing total losses of almost £30m, expressed varying degrees of

Mr Black said the documents

The Telegraph

provided to the stock exchange clearly showed that the decision to cut the cover price was made after June 10, when the Tele-graph management saw figures showing the surge in the Times sales in May. "At the time of the share sale, which we discussed with the Telegraph management,

Black; agreed with decision although it would be embarrassing

we could see nothing other than Lord Swaythling, the Telegraph's senior non-executive director, said he was convinced the executive management had

not contemplated the price cut "until very recently". Mr Black said he was not told of the Telegraph management's price-cut recommendation until June 14. "I agreed with the decision and although I knew it would be embarrassing for me I could not say 'you can't do that for the sake of your chairman's

public relations convenience'."

TOP QUARTILE PERFORMANCE SINCE LAUNCH

The exchange is also investigating attempted share sales by two Telegraph employees on Wednes-

Mr Peter Stothard, editor of The Times, said the aim was to make The Times "permanently profitable". The paper, oow selling 515,000, would probably need sales of 800,000-900,000 to be prof-

The Daily Telegraph, with circulation of about im, claimed yesterday that its 18p price cut had increased sales by more than

25 per cent. Most national newspaper managements will have to review their position in the light of the price battle. It looks increasingly unlikely that The Independent

will be able to stay at 50p. Shares in Hollinger were down 13 per cent at C\$14 in early after-noon trading in Toronto. Lex, Page 16

Eurotunnel rights take-up totals two-thirds in UK

By Simon Davies in London and John Ridding in Paris

Eurotunnel yesterday announced that only two-thirds of the UK tranche of its £858m rights issue was taken up, significantly lower than the take-up for its 1990

However, the brokers S.G. Warburg succeeded in placing out the £70.6m rump of the registered share issue to institutions at a small premium to the 265p rights price, releasing the underwriters from their obligations.

22

The underwriters are not antirely off the hook. The announcement of take-up on the primarily French-owned bearer rights shares will not be made until July 7.

In addition, the French stock exchange authorities yesterday officially launched an investigation into possible market manipulation by the underwriters. This followed a preliminary inquiry in May into accusations by Mr Christian Cambier, the French head of an association of small shareholders in Eurotunnel. Mr

may have sold short ahead of the pricing of the issue in an attempt more respectable 84 per cent. The to depress the share price, and limit their risk.

Nevertheless, the announcement yesterday of the placement of the rump of the UK issue was good news for the banks behind the Eurotunnel issue, primarily Morgan Grenfell, Banque Indosuez and Swiss Bank Corporation. The 26.6m rights units that were not taken up were placed out to institutions at 269.46p (net of costs) to "a wide range of mainly UK institutions". Unitholders who did not take up their rights will be paid the 4.46p

premium to the rights price.

Take-up of the 241.5m bearer rights shares, listed in Paris, is expected to be significantly higher. Around 45 per cent of the entire issue of bearer rights was traded this week, and buyers would be almost certain to exercise their rights, as under the French system, they do not receive the proceeds from any

French bankers suggested 8 take-up of more than 90 per cent

1990 rights issue was 84 per cent subscribed in the UK, and there was a 98 per cent take-up of the French tranche, but small shareholders were then given travel

Mr Rory MacNamara, corporate finance director at Morgan Grenfell, Eurotunnel's advisers, said: "By Eurotunnel standards, it was an encouraging response. Eurotunnel, at least in the UK, is more of a retail stock, and you would expect a lower take-up."

The placement of the rump was helped by a bounce in Eurotunnel's share price to a high of 300p yesterday, although it closed 1p lower at 278p.

The management has put its own money behind its assertions of confidence in the shares. Sir Alastair Morton, chairman hought 10,000 warrants yesterday. Both the company's chairmen have now invested in Eurotunnel stock in the past three days. Their combined investment of £28,500, however, will provide little more than moral support

JAPAN SMALLER **COMPANIES FUND** +22% OVER 1 YEAR* Guinness Flight's Japan Smaller

Companies Fund is second in Micropal's sector of nffshnre Japanese funds over one year, with a performance of 22.2% in US Dollar terms compared to the Tokyo Stock Exchange Second Section which rose by 1.0%. The Fund also has top quartile performance since its launch in November 1990". The Fund provides a well

diversified exposure to good quality small companies operating at the leading edge nf many of the emerging social, economic and technological treods in one of the world's leading economies.

WHY SMALLER COMPANIES?

Japanese smaller companies often enjoy above average growth because they tend to be well focused on their main business and

more flexible and able to respond to change. Furthermore, their management tends to be identified clusely with the campany, aften with a substantial personal stake, providing a significant spur tn

The most important part of the BNL restructuring, however, is the absorption of three medium and long-term credit subsidiaries into the main part of the group.

teed loans to Iraq.

This will increase total assets of the parent company to L145,545bn from L108,506bn. Mr Davide Croff, BNL's joint day the process of BNL restructuring would be "very ouick".

However, Mr Sarcinelli, for-

mer director-general of the Treasury and vice-president of the European Bank for Reconstruction and Development, would not be drawn on a possible date for privatisation. He reiterated that BNL would need new capital, either through a cash injection from the Treasury, or through the credit institution into the BNL portfolio.

Separately, the Treasury is preparing for the eventual sale financial services group partly privatised in January. The Treasury was left with about 28 per cent of lmi, and had to wait nine months before selling any more shares.

However, Mr Lamberto Dini, the Treasury minister, told a banking conference on Wednesday that once the nine months was up in the autumn. "we will proceed with a further reduction in our stake".

He also said the aim of the Treasury was to sell off its minority stakes in about 20 other banks little by little, a process which could realise

Thomson-CSF, Thorn EMI in talks on missile business

By David Buchan in Paris

Thomson-CSF, tha French electronics company, is plan-ning to buy the missile elec-Dresdner Bank Commerzbank hava each tronics and optronics business of Thorn EMI, the diversified bought 10 per cent of Buderus from Metallgesellschaft, tha troubled industrial and mining UK industrial group. group, Renter reports from

The deal, which would give Thomson-CSF the European Metallgesellschaft sold its 79.9 per cent stake in the heatlead in missile electronics that it already holds in optronics, is ing appliances group in a subject to final contract negotiation and approval by the French and UK governments. placement which would lead to a cash injection of DM1.2bn, Deutsche Bank, its largest creditor, said earliar this The terms were therefore not disclosed for the planned purchase. The Thorn EMI units Commerzbank's purchase of have a turnover of £90m, with a 10 per cent stake "arises from slightly more than two-thirds

coming from missiles and the

remainder from optronics.

Mr Francois Carayol, strategic director for Thomson-CSF, said the deal would lead to closer co-operation with British Aerospace Dynamics, with whom Thorn EMI works on the Rapier and Asraam missiles. It would also increase Thomson-CSF's workshare on the Trigat

France, the UK and others. Mr Carayol claimed this would not cause conflict with Matra, the missile making division of the French Lagardère group, which is separately negotiating with BAe to form a joint missile company.

anti-tank missile developed by

Matra puts a lot of Thomson-CSF electronics into its missiles, he said. "The electronics companies are joining up just like the missile mak ers", he commented, in a move that reflects increasing mergers between companies faced with static or declining defence budget orders. Thomson-CSF already has a

Anglo-French joint venture with Pilkington Ontronics. It said that the new deal would give it a role in the European Fighter Aircraft, for which Thorn EMI is developing the search and track system. The French company also has two other joint ventures with UK companies - with Shorts of Belfast on missiles, and with Ferranti on sonar.

Philips reduces stake in LCD unit

By Ronald van de Kroi

Philips, the Dutch electronics group, has broadened Europe's assault on Japan's domination of the the world market for liquid-crystal displays (LCDs) by selling a 10 per cent stake in its Flat Panel Display subsidiary to E. Merck

of Germany. The transaction means Philips' stake in the company will fall to 70 per cent. It declined to give financial details.

The Dutch group's two existing European partners, the French companies Thomson

and Sagem, will each retain their 10 per cent holdings in the Eindhoven-based Flat Panel Display.

E. Merck, a chemicals and pharmaceuticals group, makes materials used in the manufacture of LCDs, and wants to keep abreast of developments in the field, according to Phil-

The Eindhoven factory already sells active LCDs, but full commercial production is not due to start until autumn. As the only European contender in the LCD market, it is gearing towards challenging

the lead built up by Japanese

companies such as Sharp, Toshiba and Hitachi.

Flat Panel Display, established in 1993, employs 650 peo-ple. Philips has said that the company's potential turnover over the next few years could rum into hundreds of millions of guilders.

Unlike passive LCDs, which are widely-used in digital watches, active LCDs can accommodate colour moving pictures, making them an important part of displays in "notehook" personal computers, as well as in consumer electronics. They can also be used as flat-screen televisions.

Olivetti and **GM** arm in satellite joint venture

By Alan Cane in London

Olivetti, the Italian computer manufacturer, and Hughes Network Systems, a subsidiary of General Motors of the US. have formed a joint venture to exploit the market for business satellite communications in Europe.

Each company will own 50 per cent of the venture, called Hughes Olivetti Telecom. The first service, Hotstar, will provide interactive data and voice links between customer sites at a monthly rent of \$280-\$380

Each partner has invested an initial \$2m in infrastructure. Total investment over the first five years is expected to be \$25m.

The venture is targeted at large companies with more than 30 sites. It aims to build and manage a pan-European network based on a form of satellite communications called VSat (very small aperture terminal), which is increasingly being used to provide two-way communications services to businesses in the US and Europe. The first "hub" for the service will be hased in London. Talks are under way on establishing hubs in other European countries. Transmission licences are being agreed on a case-by-The initial investment cost

is comparatively low, because Hughes is already an important manufacturer of satellite communications equipment it claims 70 per cent of the world VSat market - and because Olivetti has already established a Europe-wide marketing and computer services network.

The companies say the new infrastructure will meet the telecommunications requirements of large corporations. However, the intention is also to offer new services such as software distribution and personalised newspapers.

VSat systems are able to support a combination of voice and data communications, and can be cheaper than terrestrial equivalents. Some 75.000 two-way VSat systems have been installed in the US.

Canadian insurer studies future of UK business

By Bernard Strnon in Toronto and Richard Lapper in London

Canada's financially-troubled Confederation Life Insurance is examining the future of its UK operations ahead of a proposed capital infusion from Winnipeg based Great-West

Life Assurance. Confederation said its options included the sale of its successful UK arm, which includes a bank as well as group and individual insurance

The Stevenage-based UK operation had total assets of CSLSbn (US\$1.3bn) at the end of last year, and manages funds of some 25bn (\$7.5bn). Pre-tax profits in 1993 were

£27.9m compared with £14.2m in 1992. Premium income last year was £629m against £715m

The company is one of the leading providers of pooled pension products for mediumsized companies, while its team of 850 direct sales agents markets a range of unit-linked individual insurance contracts. including standard term and savings products.

Last year's results included a C\$7.1m profit from Confederation Bank, whose growth has recently been spurred by an offshore deposit-taking operation in Jersey.

The bank offers residential mortgage loans and deposit account facilities.

which began trading in 1906, has 1,600 employees and 58

regional branches. Confederation is a mutual company owned by its policyholders, it has suffered from the downturn in the North American property market. which resulted in loan losses of C\$147m last year.

Great West, which is con-trolled by Power Corporation of Montreal, has already come to Confederation's rescue by buying some illiquid assets. Great-West has also proposed a "strategic alliance", which will in practice amount to a takeover. The two companies sim to agree on the terms of the deal by the end of July.

Avesta raises profits forecast

By Hugh Carnegy in Stockholm

Avesta Sheffield, Swedish-British stainless steel group, has revised upwards its profits forecast for 1994, on the strength of rising sales prices for stainless steel.

Avesta, 40 per cent-owned by British Steel, returned a SKrilim (\$14.2m) profit after financial items in the first quarter of this year, on sales of SKr3.98bn, It said at the time it expected that level of profitability would be maintained for the whole year. The group says the return

will be "significantly better" if current market trends contime. Avesta Sheffield, formed in 1992 through a merger between Sweden's Avesta and the stainless steel interests of British Steel, showed a loss in 1993 of SKr98m.

· Volvo has sold a data company specialising in airline crew timetable calculation to Ad Opt Technologies of Canada for US\$3m. The sale is part of the Swedish group's strategy of divesting all its interests not related to core vehicle mannfacturing operations.

Merged, Ad Opt, owned by Canadian institutional investors, and Volvo's Carmen Systems will become a leading specialist in aviation and transport time-tabling, Volvo said. Carmen's clients include Scandinavian Airlines System (SAS), Lufthansa and Alitalia Ad Opt has concentrated to date on aircraft scheduling in the North American marks

TSB feels effects of competition

Growing competition in a flat retail banking and insurance market was evident vesterday as TSB Group disclosed that income from on-going business rose by only 3.5 per cent in the six months to April 30 to £955m (\$1,47bn) from £921m in last year's first half .

TSB's pre-tax profits jumped to £226m from £80m but this was mainly due to a £92m fall in provisions for bad and doubtful debts to £113m and the absence of the previous period's £44m reorganisation

TSB reached its target of a 15 per cent post-tax return on

Nor. Assect Value

Ner Asset Value per shar

Not less for the period

equity. It achieved a 15.5 per cent return compared with 5.7 per cent in the first half of last year and 11.1 per cent for the full year.

Pressure on income emerged despite a 9.5 per cent expan-sion in the mortgage book to 26.5bn, compared with overall market growth of 2.1 per cent. Loans rose to £17.4bn from £17bn, but risk-weighted assets stayed at £16.1bn.

Mr Peter Ellwood, chief executive, reaffirmed the bank's interest in buying a building society. The aim would be mainly to sell a range of products to the society's members, rather than as a means of increasing mortgage lending. He said Lloyds Bank's £1.8bn

Gloucester Building Society had encouraged other societies because it had shown that they could preserve partial independence if they were acquired.

However, he said that the osses sustained by TSB after buying the merchant bank Hill Samuel in 1987 would make it cautious. "The last time we bought something and said to them you keep running it. it was a bit expensive," he said. TSB raised its interim divi-

dend by 12.5 per cent to 3.544p. Earnings per share were 9.6p, up from 8.1p. It increased its tier 1 ratio of core capital to risk-weighted assets to 9.1 per cent, against 8.7 per cent. Lex, Page 16

Payment of dividends

In accordance with the resolution of the general meeting of June 22, 1994, the dividend for the 1993 business year is

less Swiss withholding tax, at 35%

Payments will be made free of charge from June 24, 1994 against submission of coupon no. 2 for bearer shares and against the dividend payment order for registered shareholders at all Swiss offices of the following banks:

Credit Suisse

Swiss Bank Corporation

Union Bank of Switzerland Cantonal Bank of Zurich

and at the company cash desk, Mythenquai 2, 8002 Zurich.

Registered shareholders who have designated the bank where they have deposited their shares as their address for payment of dividends will receive the normal dividend credit note from this bank. Persons holding their registered shares themselves will receive their dividend payment order by mail.

From petiti

United Airlines, the biggest US carrier, yesterday stepped up the US air fare war by announcing that its new unnamed low-cost subsidiary would start flying on October 1.

It said the specialised short-haul carrier would take to the skies with an initial daily schedule of 82 flights spread among 14 routes on the West Coast of the US. It declined to specify the rontes, hut said seven were served by United and seven were not.

Services would be expanded rapidly to 129 flights in November and to 143 flights in December. Fares would be announced later, but would be "very attractive", UAL said.

United's plans for the new airline, dubbed U-2, depend on shareholder approval of its plan to give employees a 55 per cent controlling stake in the parent company in exchange for \$4.9hn-worth of labour concessions. The vote is due on

At least one big institutional investor has said it would vote against the plan. However, if approved, the labour concessions will provide United with the cost structure it needs to fight back against other lowcost carriers such as Southwest Airlines.

United said in addition to low fares, its new operation would feature intensive use of Boeing 737 aircraft with fast turnrounds. But unlike Southwest, it plans to offer first-class as well as economy class, seat assignments at the airport, and in-flight food and

United will be the second of the big US carriers to set up a low-cost airline-within-an-airline to compete with smaller low-cost carriers. The first was Continental Airlines with its CALIte operation. A third big carrier, Delta Air Lines, has rejected the idea in favour of all-round cost cutting.

Canadian group buys polyols units from ICI

By Bernard Simon in Toronto

ICI, the international chemicals group, is to sell some of its North American operations to Harrowston, a Toronto-based company which emerged from the ashes of the fallen Belzberg family empire. Harrowston declined to reveal terms but said the deal would be all cash.

The deal involves ICI's polyols businesses and includes a factory in Delaware which makes a wide range of polyhydric alcohols used in the pharmaceutical, oral care and confectionery markets. The deal remains subject to US regulatory approvals and completion of detailed negotiations.

Harrowston's chief executive is Mr Brent Belzberg, nephew of Mr Sam Belzberg who made a name in the 1980s as one of North America's most formida-

ble corporate raiders. The Belzbergs' empire, linked through the First City Financial group, was hit by several loss-making investments and the slump in real estate markets.

Harrowston was created from First City's remnants in the early 1990s and recapitalised by a group of large Canadian institutional investors. The Belzberg family no longer has a stake in the company, beyond a small shareholding and options held by Mr Brent

As in its latest deal, Harrowston's strategy is to buy businesses put on the block as part of the rationalisation of much larger companies. It has bought ICI's North

American sulphur products division as well as a small division of Du Pont, the US chemicals group, and a retail meat

shed 2,600 iobs in cost cutting plan

CPC International, the US-based food company whose brands include Hellmann's mayonnaise, Knorr soups and Mazola corn oil, is to shed 2,600 jobs from its interna-tional workforce of 39,000 over the next two years as part of a cost-cutting plan. It said the restructuring

would bring a pre-tax charge of \$227m to second-quarter profits, equivalent to \$137m after tax or 92 cents a share. About two-thirds of the charge represented the noncash costs of writing off assets, including some plant

closures, it said. CPC has been increasing efficiency over several years by consolidating production. Past moves have included the closure of six plants in North America and substantial relo-cation of production within

Yesterday, however, Mr C.R. Shoemate, chairman and chief executive, said the action afready taken was not enough. The charge announced today represents a longer-term, more aggressive view. We are tak-ing actions now for competitive advantage in the major world markets at the end of the decade," he said.

A large proportion of the job cuts will fall in Europe, where mification is increasing crossborder competition. CPC is responding by transferring production of its various brands to the plants where they can be produced most efficiently - for example, by moving production of its Knorr products for the Nordic market from Switzerland to

CPC is taking similar action to increase the efficiency of its consumer food businesses in North America. It said it was also taking steps to strengthen its competitive position in its Latin American corn refining

gains and lower financing costs belped CPC report a 9 per cent increase in net income to \$98.1m on turnover 6 per cent ahead at \$1.74hn.

CPC Intl to | Market turmoil puts 'King Kidder' to test

Few expect the market for mortgage-backed bonds to rebound, writes Richard Waters

US mortgage-backed issues

In the \$1,600bn market for mortgage-becked bonds. Kidder Peabody is the undisputed king. Even after the recent turmoil, in the mar-ket and at Kidder, it remains ths dominant force in the market

The question for Kidder, is whether this market, which until recent months provided the bulk of its profits, will ever rebound to 1992-93 levels. Mortgege-backed bonds,

known as pass-throughs, are created by securitising pools of domestic mortgage loans. But only about half of all mortgagebacked bonds outstanding are held ea plain pass-through securities. The rest have been converted into structured bonds, each with a different risk and peyment profile. These structured securities are known as collateralised mort-

gage obligations (CMOs).

It is in the creation of CMOs that Kidder has made its name. It is the activity that has given rise to most speculation on Wall Street about the firm's financial health. CMOs are structured to meet

the different risk appetites and cashflow needs of different customers. For example, US banks traditionally hig buyers of CMOs, though their purchases have dropped sharply - have used short-term securities to lift the yield on their large bond portfolios, while adjusting the interest-rate sensitivity in their basic banking busi-

Plain mortgage-backed bonds are highly liquid but the tranches of individuallytailored CMOs into which they are carved may not be - partic ularly when prices are falling and there are few buyers. That is what happened in recent

In the rout in US fixed income markets as the Federal Reserve raised interest rates this spring, mortgage-backed bonds fell faster than most. Mr Joseph Hu, an analyst at Oppenheimer, says the bench-

mark mortgage-backed issue, the 8 per cent Ginnie Mae bond maturing in 2008, yields about 100 basis points more than Treasuries. Last year, that spread averaged 80-85 basis points. Since these bonds are backed

by the US Treasury, the pre-mium mainly reflects a risk which is unique to mortgage-backed bonds. If borrowers opt to pay off their loans early as nterest rates fall (as happen last summer) bond holders are faced with reinvesting at the new, lower market rates. On the other hand, if borrow-

ers choose not to pre-pay the loans because interest rates are rising (the experience of this spring) then the average lives of the bonds are extended, making their yields ess attractive.

With a positive US yield

curve - albeit not as steep as at the start of the year - bond holders demand a higher yield for holding longer-term bonds. The recent swings in the Interest rate cycle has earned mortgage-backed securities the nickname 20-20 bonds. "They could last 20 months, or 20 years," says Mr Hu.

Banks have been among the higgest sellers of CMOs. For regulatory reasons they bold mainly short-term paper, and are forced to sell as the bonds' duration grows longer. The pressure has spilled over into other fixed income markets, as managers have sold long-dated Treasuries or other liquid bonds to offset the extra duration injected into their portfolios by the changing pre-payment habits of mortgage

bese pressures have made the mortgagebacked market one of the biggest sources of concerns among followers of the securi-ties industry.

With falling prices and less liquidity, it is no surprise that Kidder has been besieged by reports of hig losses. It has suffered indirectly from the loss of liquidity that hit some parts of the CMOs market.

Askin Capital Manag

a specialist fund group that invested in CMOs, declared itself insolvent as the market dried up. Kidder, which traded beavily with the firm and held its bonds as collateral, faces a loss of about \$20m. Kidder has denied similar

problems in its portfolio. Since March, the firm had cut its holdings of CMOs to under \$10hn from \$16hn, Mr Jack Welch, chairman of General Electric, the firm's parent, said. This was not a fire-sale, added Mr Dennis Dammerman, the GE chief financial officer who was this week put in to run the firm, With fewer new honds being underwritten, it was natural for Kidder's inven-

tory levels to run down. GE and Kidder deny that Kidder has sold off its most liquid holdings first, leaving it with securities with no ready market. The firm bad made sales from every part of its bond portfolio in recent weeks.

said Mr Dammerman, Its hold-

ings of bonds which have been on its books for more than six months have fallen to \$130m in the past month from \$600m. The valuation of its portfoliu has been scrutinised by audi-tors KPMG, among others.

inevitably, given its position as the biggest trader in this market, Kidder has taken losses. GE put these at \$25m-\$30m since the end of March. This was far less than the \$100m that an internal analysis last autumn had suggested it could lose in such circum-stances, Mr Welch said. Such stress-testing is common among securities firms as a way of assessing their potentlal exposure to rapid price

The direction of the mortgage-backed market, and a review of Kidder's internal controls in the wake of the Joseph Jett scandal, could prove more significant for Kidder in the long term. New issue volume has dried up in recent months as demand for the bonds has fallen. Few expect a repeat of the recent bull nur-

Kidder is at least holding its position in the market, whatever its internal troubles. In the first three countles of this year, it underwrote \$26hn of bonds, or a quarter of all new ures compiled by Securities Data. This was more than double the market share uf its nearest rivals. Since the end of March, it has remained in front, with a market share of 19 per cent, ahead of Salomon, with 17 per cent of the market.

Rio Algom reorganises in North America

By Robert Gibbens in Montreal

Rio Algom, the Canadian mining group which brought the Cerro Colorado copper property in northern Chile on stream last February, is reorganising its north American metals distribution business.

The Atlas Alloys operation In the first quarter, volume with 12 service centres in Canada, Vincent Metals with 15 locations in the US, and Aceromex in Mexico, together with annual sales of nearly C\$600m (US\$433m), are being

put inlo a new division called North American Metals Distribution, headed by Mr Norman Smith, now president of Vin-

During the recession, Rio Algom considered selling its metals distribution business because of poor prices and low margins, but it has now decided to develop it further in Canada and US.

"Margins are better in the US where we are likely to expand by acquisition," said Mr Forbes West, vice-president. "But strong Canadian capital spending could justify growth in Canada as well." Rio Algom has Invested

US\$280m in 100 per cent-owned Cerro Colorado. The mine uses the solvent extraction process and has annual capacity of 40,000 tonnes. This will be increased by 50 per cent in the next few years. Rio Algom is also exploring other Latin American based metals proper-

RTZ sold its 51.5 per cent interest in Rio Algom in 1992 for C\$362m, Since then the company has pushed ahead in Chile, plans to develop a US\$250m zinc-copper property in Wisconsin jointly with Exxon, and is buying a 25 per cent royalty interest in the pre-

zinc mine in the Canadian arctic. Rio Algom also gets a 25 per cent interest in any expansion of reserves. The Wisconsin mine and the

C\$57m investment in Polaris

will provide Rio Algom with a

strong base in zinc.

China development bank focuses on infrastructure

By Tony Walker in Beijing

The newly-established State Development Bank, an important element of China's financial sector reforms, expects to lend Yn80bn (\$9.3bn) this year for projects in such areas as power generation, transport and telecommunications.

Mr Yao Zhenyan, president of the bank - which has been modelled on the Development Bank of Japan - said that the process of evaluating loan requests began within days of the bank being formed in May. The bank's most important function will be to assume the state-oriented lending responsibilities presently shouldered by

China's "big four" specialised banks, allowing them to become commercial entities.

The specialised banks had functioned almost as aid agencies for the government's infrastructure needs and were given little encouragement to make independent assessments of

the projects. Mr Yao indicated that the

its energies in the power sector (where there is significant demand for capital), telecommunications and transport.

The bank, which has registered capital of Yn50bn, would raise Yn65bn for landing to development projects. It would rely on central government support, but would also tap the commercial banks and eventually would float bonds domestically and internationally.

Mr Yao said the bank would shy away from lending for construction, which would be the main responsibility of the Agriculture Development Bank. one of three recently established policy-lending institutions. The other is the Import and Export Credit Bank. But the State Development

Bank would support large construction projects such as the Three Gorges dam on the Vangtze river. It was providing Yn3bn in loans this year for

Mr Yao was adamant that the bank would not assume responsibility for the bad loans of the specialised banks. Western officials had predicted this would be one of the hank's functions.

"We say old problems should be solved through old channels, and new problems should be solved using new methods," he said. "If we take over the problems our bank would go bankrupt in three years.

While commercial banks must be profit-oriented, our bank must not ba loss-orianted," he added. "This demands that what we will run is a bank and not a currency

Some estimates have put

China's infrastructure requirements to the year 2000 at

Yn700bn. This includes 121 important projects designated by the state. The State Development Bank also planned to participate in BOT (build-operate-transfer) funding operations and other forms of financing aimed at

attracting foreign capital. Mr Yao ranked China's three priority infrastructure areas as the Three Gorges project, the Beijing-Kowloon railway, and power plants "all the way to Tibet".

Recapitalisation recommended for Australian retail chain

By Nikki Tait in Sydney

The voluntary administrators of Brash Holdings, the Australian electronics retail chain which ran into financial difficulties when its banks refused to roll over A\$61m (US\$46.9m) of borrowings last month, are recommending that the company be recapitalised.

The recapitalisation would be undertaken via a A\$40m injection from interests connected to Mr Ong Beng Seng, a Singaporean businessman.

The administrators are recommending that the investor take control of Brash's trading

They said that under the agreement with Hotel Properties/Reef Holdings - two com-panies associated with Mr Ong unsecured creditors would

get an estimated 38 cents in the dollar, while secured creditors could receive up to 75 cents in tha dollar. Banks, whose security was established in February 1994, would get 64 cents in the dollar.

HPL/Reef has sizeable interests in Australia, as well as Asia, the US and UK. Its Australian assets range from the Planet Hollywood restaurant in Sydney, to Hyundai Automotive Australia.

According to the administrators, Mr Ong has no plans to hreak up Brash's, a 170-store chain. They expect the new owner to try to relist the Australian group. The administrators have

been soliciting offers for the company since they were

called in on May 2. They said that 10 proposals or indicative offers had been received, but that the HPL/ Reef solution was "the best

offer for the husiness". Creditors must approve the plan, and a meeting has been called for June 30.

• MIM, the Queensland-based metals group, has signed formal loan agreements for the financing of the McArthur River zinc-lead-silver project in the Northern Territory.

The facilities allow for US\$153m of base funding and contingencies and a further A\$15m in working capital facilities.

Australia, Crédit Lyonnais, AIDC and Citibank.

The banks involved are Westpac, NatWest Markets

The project will cost A\$250m and the mine is due to begin commissioning in mid-1995.

Havas chief AT&T's hidden global agenda sees 'real opportunity' for growth

Havas, the French media and leisure group, yesterday con-firmed that it was oo course for profits growth this year and announced plans to reinforce its links with France Telecom, the state-controlled telecommunications group.
Mr Pierre Dauzier, chair-

man, told Havas's annual genwal meeting in Paris that it had "a real opportunity for profits recovery" in 1994. Havas, which was hit last year by economic recession, saw net profits fall to FF1708m (\$129m) from FF1823m in 1992. group, and Singapore Telecom, it said it needed Enropean The group has already expe-

rienced an increase in sales this year with turnover growth of 6.1 per cent for the first quarter continuing through April and May. It should also benefit from exceptional profits on various transactions against a FFr60m exceptional debit last year.

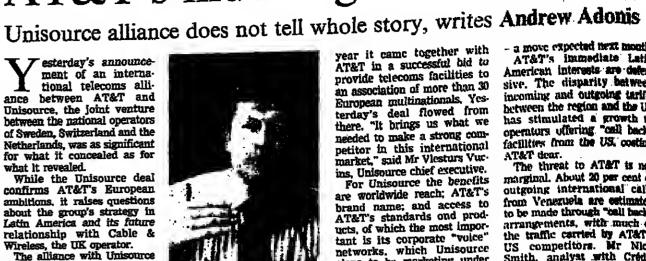

Havas said it expected to make an exceptional profit of FFr55m on a deal completed yesterday whereby it has taken full control of Office d'Annonces (ODA), the advertising arm of France Telecom's

The deal leaves France Telecom as a significant minority shareholder in Havas with a 5.5 per cent stake following issue of 2.7m new Havas

Mr Dauzier yesterday stressed that the ODA transaction was intended to be a catalyst for future co-operation between the two French groups. "This deal cements our relationship," he said. The relationship between

Havas and France Telecom has already attracted controversy following the recent row over the resignation of Mr André Rousselet as chairman of the Canal Plus media group.

Mr Rousselet's resignation followed moves against him by Havas and other shareholders Mr Rousselet claimed the moves were part of France Telecom's long-running efforts to win infinence over Canal

Alex Mandl: masterminded the Unisonrce negotiations

of three of the world's four largest telecoms operators. That left AT&T with only one serious European option -Unisource, a joint venture launched earlier in the year. It was not just a process of elimination. Mr Alex Mandl, the Austrian-born chief executive of AT&T's communications services division who master-minded the negotiations, did not underestimate the potential to weld Europe's smaller operators into a strong third

Unisource's attraction to AT&T was heightened by two alliances it formed last year: with Telefonica, the Spanish national operator; and with Sita, a global data network operator owned by alrlines, aviation and freight companies, opening up a potentially lucrative market for "one-stop" international telecoma

Unisource was urgently seek-ing a US alliance, Earlier this

year it came together with AT&T in a successful bid to provide telecoms facilities to an association of more than 30 European multinationals, Yesterday's deal flowed from there. "It brings us what we needed to make a strong competitor in this international market," said Mr Vlesturs Vucins. Unisource chief executive.

For Unisource the benefits are worldwide reach; AT&T's brand name; and access to AT&T's standards ond products, of which the most important is its corporate "voice" networks. which Unisource plans to be marketing under the Worldsource brand by the end of this year.

However, yesterday's announcement concealed two significant aspects of AT&T's international strategy. First, its interest in Telefonica is only partly due to the Spanish operator's European presence: more important, analysts believe, is Telefonica's substantial interests in Latin America, where AT&T's influence is weak and its vulnerability to competition growing.

Telefonica is active in every sizeable Latin American market, apart from Brazil, and expects to draw at least 15 per cent of its revenue from the region this year. Through Telefonica International It has stakes ranging from 6 per cent to 79 per cent in operators in Chile, Argentina, Venezuela, Puerto Rico and Peru.

AT&T has been in talks about taking a stake in Telefonica International separately from its designs on Unisource. That option will remain open, even after Telefonica becomes an equity partner in Unisource

- a move expected next month AT&T's immediate Latin American interests are defensive. The disparity between incoming and outgoing tariffs between the region and the US has stimulated a growth in operators offering "call back" facilities from the US, costing

AT&T dear. The threat to AT&T is not marginal. About 20 per cent of outgoing international calls from Venezuela are estimated to be made through "cell back" arrangements, with much of the traffic carried by AT&T's US competitors. Mr Nick Smith, analyst with Credit Lynonnais Securities in Mad rid, said: "AT&T wants to normalise the regime in Latin America, and Telefonica offers the best prospect of doing so."

The second aspect concerns AT&T's relationship with Cable & Wireless, the UK International operator as yet non-aligned in the battle for the multinationals. For the post year C&W has claimed to be its own best strategic partner in the international arena. In reality, the group has been heavily engaged in negotiations with ATRT. Mercury, his UK opera-tion, came close to agreeing to join Worldsource earlier this month; Hongkong Telecom, by far C&W's largest concern, is still in negotiations.

C&W claims that Hongkong Telecom can safety go its own way, since it is relatively insignificant to the global market for multinationsis. But if AT&T plugs into the heart of the C&W group, speciation about the future of CAW's limbs will inevitably escalate.

Neste swings back into black after shake-up

By Hugh Carnegy

Neste, the state-owned Finnish oil and petrochemicals group, staged a dramatic return to the black in the first four months of the year, rebounding to a FM210m (\$39m) pre-tax profit from a loss of FM719m in the same period last year. The turnround reflected a

Production of the control of the con

to FM17.9bn from FM24.6bn, following the merger of Neste's petrochemicals and polyolefins operations in a 50:50 joint venture with Norway's Statoll, called Borealis.

Turnover was also reduced as Neste trimmed its trading activities to ensure trading operations did not account for more than their historical 50 per cent share of group turn-

over, Neste intends to focus increasingly on oil and energy. Low crude oil prices held down profitability for Neste's oil production, and refining margins were tight. But operating profit was up sharply at FM443m, compared with FM229m lest time, and financial costs tumbled to FM233m from FM948m, producing the turnround at the pre-tax level.

Writteo applications to:

Mr Edgar R Saravia, National Secretary for Capitalization and Investment, Ministry of Capitalization, Edificio Palacio de Comunicaciones - Piso 20, Av. Mariscal Santa Cruz, PO Box 1583, La Paz, Bolivia. Fax: (591 2) 377451

ELECTRICAL POWER BOLIVIA

Capitalization of ENDE's Three Power Generators

THE GOVERNMENT OF BOLIVIA, as part of its capitalization program, is now seeking formal written expressions of

interest from international power sector operators or operator-led consortia considering investment in the three power

generation businesses of ENDE, the state-owned electricity company. Under the capitalization program, ENDE's hydro and

two regional thermal generation husinesses are to be transferred to the private sector. Fifty per cent will be owned by

institutional investors, in the form of pension funds representing the citizens of Bolivia, and in a small part, by employees.

This is a novel form of privatization intended to secure long-term support for the strategic investor and the development of

STRATEGIC INVESTORS will acquire their 50 per cent shareholdings by subscribing new shares for cash. The new capital

raised in this way will be used to fund expansion of Bolivia's installed generating capacity for sale domestically, where

demand is growing at a rate of more than 7 per cent a year, and internationally, where Bolivia's geographic location allows

access to the neighbouring markets of Peru, Chile, Argeotina, Paraguay and Brazil. Bolivia has significant reserves of natural gas as well as considerable untapped hydro and geothermal potential in the Andes to allow the rapid development of cross-

Power Sector Operators are now invited to submit brief statements of qualification including annual reports and relevant experience so that potential partners may be pre-screened prior to the tender procedures and formal negotiation which are expected to be completed by 28th November 1994. Written expressions of interest should be submitted to arrive in La Paz no later than 8th July 1994. Successful applicants will then be given access to data rooms in La Paz, London and New York.

INTERNATIONAL CAPITAL MARKETS

Cautious buying extends recovery in European prices

By Conner Middelmann and Graham Bowley in London and Frank McGurty in New York

European government bonds extended Wednesday's recov-ery yesterday, helped by cautious buying from investors who had been sidelined for

Some participants said the markets may be bottoming after months of sharp declines.
"We are close to the bottom," said Mr Nigel Richardson at Yamaichi International. "We are approaching a level where investors are ready to come back to the market."

However, others said it may take a while before bonds can stage a sustainable recovery "If a bullish turnround is actually beginning, a re-test of the lows will be needed to strengthen the base from which to build a sustainable

expect stable

yen/D-Mark rates.

sea offer shill

below Y104. (The survey was

nptrend," argued Mr Kari Haeling, of Deutsche Bank. "I see this as a much-needed

bear-market correction." commented Mr Graham McDevitt of market analysts IDEA. He expects the recovery to continue near-term, underpinned by chart-technical factors, but warned that bonds might succumb to some profit-taking before the weekend.

■ German bonds ended a vola-tile session firmer, with the longer maturities outperforming the short end. The Bundesbank council's decision to leava official interest rates unchanged prompted some slippage after early rumours of

rate cuts. Cautionary comments from council member Mr Otmar Issing, who said markets should not conclude that the recent pattern of regular five basis Most activity continued to take

point cuts in the securities repurchase rate would automatically continue, further damped interest rate optimism. Some traders have been speculating that the Bundes-

bank may set fixed-rate repos through the summer period, possibly at a rate below the current 5 per cent. In late trading, the September bund future on Liffe was about 0.47 points higher at

■ UK gilts gained slightly in thin and nervous trading that saw sharp rises and falls throughout the day.

But analysis remained scep-tical about how long the recent improved sentiment - due largely to the halt in the dollar's slide and the perception that a US interest rate increase is not imminent - will last.

place in the futures market, with few cash transactions. "The fundamental problems still remain - to do with funding, economic recovery and the strength of inflationary pressures," said Mr Simon Briscoe, of S. G. Warburg Securities. "The market will continue to

look for reasons to fall back

again," said one trader. GOVERNMENT BONDS

Analysts confirmed rumours that the Bank of England supplied a modest amount of bonds yesterday to marketmakers which have suffered from recent bond volatility. The Bank announced that a £150m tranche of 4% per cent index-linked glit due 2004 was

exhausted in late afternoon

cal squeeze but above the low W French bonds ended a vola-tile day sharply higher, lifted by early buying in the futures market and follow-through

points at 100% in late trad-

ing, off the day's high of 100

reached after an early techni-

cash buying in the afternoon. The September notional bond future on Matif rose 1.26 points ■ US Treasury bonds were

mixed yesterday morning amid conflicting economic signals and further improvement in the dollar. By midday, the benchmark

30-year government bond was a lower at 86 h, with the yield rising 7.403 per cent. The two-year note was h better at 100 h, to yield 5.95 per cent.

economic news were released yesterday morning, but neither of them was particularly con-

The Commerce Department said new orders of factory goods last month had risen 0.9 per cent, substantially more than the consensus forecast of

0.4 per cent.

However, the inflationary implications of the gain were mitigated by a 2.5 per cent decline in orders of nondefence capital goods, exclnding aircraft. Treasury prices dipped on the announcement but heavy

selling pressure failed to materialise in early trading. Later in the morning, the Labor Department had some unqualified good news for the fixed-rate investors looking for signs of moderating economic

mitial claims for unemployment benefit last week had climbed by 3,000, against expectations of a 3,000 decline. in the foreign exchange markets, developments were mildly positive, as the dollar moved above the Y101 mark on

unfounded speculation that central banks were poised to intervene on the US currency's Commodity prices, excluding

gold, were softer, in keeping with a week-long trend. As a result, Treasuries turned around and nudged in to positive territory by midmorning.

However, prices soon began to erode again as traders remained tentative pending any convincing developments either in terms of economic news or movements in the commodity or foreign exchange markets.

Vereinsbank taps Czech fixed-rate debt sector

By Vincent Boland in Prague

Bayerische Vereinsbank has become the first foreign hank to tap the Czech koruna fixedrate debt market, launching a Kcslhn issue with a three-year maturity and a coupon of 11

The issue, through a subsidiary - BV Finance Praba and guaranteed by Vereinsbank's Prague branch, was placed with domestic and international banks and was priced at 101.45 per cent. The bank will use the pro-

ceeds for Czech koruna lend-ing. It said it had tapped the Czech koruna market to elimi-Prague has an active and liq-uid short-term money market

but access to long-term capital is difficult. "Three-year money docsn't exist in the [Czech] interbank market," said Mr David Svo-jltka, Vereinsbank treasurer

in Prague. "This is the only way to get long-term money at a reason-able price. The market was

hungry for a new instrument at an attractive yield." Domestic companies and the Czech Republic bave previously issued Czech koruna bonds but Mr Svojitka said

Vereinsbank expected to return to the market again later this year.

The bank has applied for a

licence to set np a German-style mortgage bank in the Czech Republic and if the application is successful It will seek to issue bonds with

at least a five-year maturity". Three further Czech koruna issues are expected to come to the market this summer. Bankers say another foreign institution may make an issue later this year.

Forex dealers Improvement in sentiment brings a flurry of issuance

three months

There was an emerging-market flavour to the eurobond market Foraign exchange dealers expect currency markets to be relatively stable in the next yesterday as an improvement in sentiment in European govthree months, according to a survey by Foreign Exchanga ernment bond markets encour-Letter, a newsletter published aged a flurry of issuance in a by Institutional Investor.

variety of currencies.
The Province of Buenos More than two-thirds of dealers expect there to be no signif-Aires launched its first deal under its medium-term note icant change in D-Mark/sterling, French franc/D-Mark, and programme when it raised \$100m through an offering of However, nearly half expect three-year eurobonds. the yen/dollar rate to languish Lead manager Salomon

Brothers said the bonds were

conducted in mid-June, prior to the recent sharp fall in the mainly bought by emerging market funds in the US through the 144a tranche. A Among chief dealers, 67 per portion of the offering, which cent expect to see more portfowas priced to yield 333 basis lio fund management business, points over Treasuries, was and 33 per cent predict more swapped into yen to appeal to leveraged fund business. Japanese investors.

The other emerging market borrower of the day was the National Bank of Hungary By Antonia Sharpe

> issuer's strategy of broadening its investor base and accessing INTERNATIONAL BONDS

> which made its first appear-

ance in the euro-guilder sector.

Lead manager ING Bank said the deal was part of the

more markets. Syndicate managers noted that this was also the first euro-guilder offering by an emerging market bor-

rower for five years. The Fl 150m issue of fiveyear bonds, which were priced to yield 235 basis points over comparable Dutch government bonds, was bought mainly by domestic institutions attracted by the yield spread. When the bonds were freed to trade, they traded at 98.70, down from the re-offer price at the launch o 98.835

Rabobank also tapped tha five-year area of the euro-guil der sector when it raise Fi 500m. Some syndicate man agers expressed surprise at the yield spread of 18 basis point over five-year Dutch govern ment bonds which in their view was several basis points wider than Rabobank's usua

They said the generous pricing reflected the issuer's desire to ensure a favourable response from investors to this relatively large deal. The bonds were targeted mainly at retail investors since institutions were still looking at the longer end of the yield curve.

Southern Electric up at £222m

By Michael Smith

A sharp improvement in the performance of non-core businesses helped Southern Electric, the power distributor in the south-east of England, to increase annual pre-tax profits by 18.5 per cent to £222m, a figure at the top end of City

Turnover for the 12 months to March 31 fell slightly to £1.78bn (£1.8bn). Earnings per share were ahead 17 per cent at 64p and the recommended 16p final dividend makes a total of 22.7p, an increase of 15.8 per

While operating profits of the distribution business were up 2 per cent at £182m, the supply business achieved a 49 per cent improvement to £32.4m, including £15m of prof-

The contrast could be

instructive. After elec-

tricity privatisation four

years ago, East Midlands Elec-tricity was intent on broaden-ing its horizons and became

the most acquisitive of the 12

its core businesses, even to the extent of holding back from

the dash for gas in which all other 11 regional companies

invested in generation plants.

The two companies were this

week displaying the results of

their policies. East Midlands was not flattered by the com-

While Manweb's pre-tax prof-

its rose by 14 per cent to £126m, East Midlands reported

a £100m fall to £51m after tak-

ing an exceptional hit of £130m

as a result of diversifications

into contracting and home security and write-offs on its

It seems to have learnt its

lesson. Mr Nigel Rudd, recently

appointed chairman, made his

name as the head of the acquis-

itive Williams Holdings, but be

says electricity companies

should stick to what they

know about and concentrate

East Midlands has ruled out

for now the possibility of fol-

lowing other regional power

utility services. But what

about other companies? Are

there more non-core problems

Almost certainly there are;

but the worst fears are about

what the companies will be

tempted to diversify into in the

future, rather than what they

have already grown or bought

After seeing the disastrous

results of the privatised water

company's forays outside their

main business, the power com-

panies have been relatively

SG Warburg Securities esti-

mates that total investment on

non-core activities by the 12

regional companies is less than

£650m, compared with their

market capitalisation of more

than £12bn. Water companies,

ndamies in providing

ahead?

on their core activities.

retailing interests.

Manweb, however, stuck to

regional power companies.

its from previous years recov-ered under regulatory adjustments. Non-core husinesses chipped in £18m (£2.4m).

The sharpest improvement was shown by MP Burke, the utility contractor, which lifted profits from £1.7m to £4.3m. Southern's contracting arm also impressed with a £3m contribution, against £600,000 in 1992-93. Losses from Powerhouse, Southern's retailing joint venture, were reduced to £1.7m (£7.2m).

The improved core performance was helped by the company's cost-cutting efforts. In the main business, manpower was 497 down at 4,771.

Southern charged £21.6m against profits for future restructuring and £12m for information technology costs

Singed fingers among the recs

Michael Smith on the diversification lessons for power companies

cent stake in Stockholm

recently.

Energi.

And whereas some of the

Southern's shares have taken a bigger hit than most of its rec counterparts in recent weeks. but this probably owes more to the institutions targeting bigger companies when offloading stock than to any disenchantment with the group. There was certainly nothing to complain about in yesterday's results. The core job cuts mean that Southern should easily be able to exceed its target of 1,000 within three years from March 1993. Simplifying management structures will also help to reduce costs, which Southern expects by the mid-1990s to be £25m lower than 1992-93 levels. Meanwhile, the non-core business are performing well enough to suggest that the target of producing 15 per

cent of profits from them by

which paid £90m for the elec-

its three London airports.

tricity distribution networks of

This is performing above expectations, contributing

£11m operating profit last year.

Again, the City approves

because it is so close in nature

Similarly there is only lim-

Ited downside in the recs'

moves into power generation.

It is possible that Prof Stephen

Littlechild, the industry regu-lator, could rule that these are

too expensive later in the

decade and prevent the compa-

nies from passing on the costs

of what could be expensive

power to customers, but the

power economically.

petition is intense.

attracted fewer recs

to London's core business.

the end of the century may be over-cautious. Generation activities alone could be contributing £15m to £20m within a couple of years. The potential downside, as for all the recs, is the regulator's distribution review due for completion this summer. However, Sonthern seems as well placed as any to cope; last year's profits were depressed by a cautious approach to provisioning. And if things get really tough, Southern could perhaps think about releasing soma of the 524m it has previously provided for adverse European rulings on pensions; other power companies have already done so. On a prospective yield of about 5.7 per cent, assuming a 25.8p dividend this year, the

sells part of defence side to French

By Bruce Clark

Thorn KMI, the rental and music group, has agreed in principle to sell part of its defence activities to Thomson-CSF, the French

defence electronics group. The deal, while not unexpected, amounts to a significant step in the consolidation of the European defence industry, where pressure to merge has been growing because of failing defence procurement budgets.

The terms were not disclosed. Sales of the activities sold, including missile-fusing systems and electro-optics, were about 80m last year. Some 1,100 people work in the division affected, at Hayes, north-west

of London Thomson-CSF is a strong player in electro-optics, while the Thorn unit expects lucrative work from providing thermal imaging and infra-red systems for the European righter Aircraft.

The deal leaves out Thorn's defence electronics activity in three other centres – Crawley, West Sussex, Wells, in Somerset and Rugeley, Staffordshire – where combined sales were about

Ellom last year. The Crawley unit provides electronic support systems each as radar and jamming devices for naval ships and submarines. Analysts said the government would be nervous about letting them pass into foreign hands.

While prestigious, the sales prospect for these naval systems look relatively poor, at least until the building of the mooted common generation frigate by Britain. France and Italy. MoD officials have no

objection to foreign interests taking equity stakes and earning dividends from British defence companies, but units handling sensitive UK technology must have directors who are British

By Peggy Hollinger

Courts, the home furnishings retailer, yesterday became the second UK company to pay for-eign income dividends, but went one step better than its predecessor, BAT, by offering to absorb the tax cost for inves-

Courts is increasing the final pay-out by 36 per cent to 5p, for a total 27 per cent ahead to 7p. The increase in the final dividend represents a 9 per cent improvement on the previous final, plus an additional 25 per cent rise on the higher pay-out to protect shareholders from a 25 per cent tax burden.

Mr Bruce Cohen, chief execu-tive, said the decision to pay FIDs would benefit both investors and the company by helping to eliminate its advance corporation tax surplus. Courts was likely to continue paying further FIDs, given its unrelleved ACT burden of some £4.2m, he added.

Caribbean region. Courts' other overseas businesses con-tinued to move ahead, particu-

larly in south-east Asia. Sales of overseas businesses grew by 26 per cent to £148m, with profits before deferred income and exceptional credits up by 16 per cent to £22.6m.

Transfers to deferred credits rose by 30 per cent to £11.8m The transfers arise from Courts' hire purchase scheme. which is particularly popular in Asia. Courts finances the lease deals itself, but does not take the income from product sales into profits until pay. ments are made. This is put into a deferred profit reserve which stood at £49.3m at the year end. This would eventually flow through to profits, Mr Cohen sald.

The UK had shown signs of a recovery in the bousing mar-ket, although it was still "far from buoyant", said Mr Cohen. Nevertheless, Courts was encouraged snough to revive its expansion programme, which had been on hold for some time. Five new superstores were planned for this year, to bring the total to 34. Earnings rose by 73 per cent

to 65.36p. Excluding the excep-tional credit, carnings were 21 per cent higher at 31.17p.

Enterprise may start buying Lasmo shares

By Robert Corzine and Peggy Hollinger

Speculation mounted yesterday that Enterprise Oil could next week begin buying shares in Lasmo, its unwilling bid target, as the deadline draws near for acceptance of its £1.7hn bid. Enterprise, which almost

two months ago launched its hostile all paper bid for Lasmo, is allowed to buy up to 10 per cent in the market. It is believed that Enterprise has set aside £150m for share purchases if it is not confident it can reach 50 per cent through

straight acceptances. Meanwhile, the rival oil explorers vesterday exchanged what are expected to be their final shots in the bid battle before sbareholders make up their minds next week.

Both companies reiterated their arguments for and against the offer. Mr Rudolph Agnew, chairman of Lasmo.

said acceptance of the offer would mean giving away a disproportionate share of assets and future growth for an "inadequate share in an enlarged company".

Enterprise accused Lasmo of repeating "the same tired assertions". It said an enlarged company offered better gearing to the oil price through the warrants being offered to shareholders, and greater financial strength to exploit assets. It is expected to send a detailed document to Lasmo shareholders tomorrow.

The argument will now be carried directly to institutional investors, with both sides spending the last seven days canvasing for support. Mr Gra-ham Hearne, Enterprise's chairman and chief executive, is currently in the US doing the rounds of institutions.

Enterprise's shares fell top to 413p, while Lasmo shares

ML recovers with £5.23m and restores dividend

By Paul Taylor

ML Holdings, the aerospace, defence and electronics group, yesterday reported a £5.23m pre-tax profit for the year to March 31, compared with an £11.2m loss last time.

The group underscored its return to pre-tax profits - the first since 1991 - by proposing to resume dividend payments. Earnings per share of 2.9p compared with losses of 18.4p and the board is recommend ing a 0.85p final dividend. It intends to pay both an interim and final dividend in future.

The shares closed 4p higher at Mr Howard Grant, chief

executive said: "In 1993 we laid down our strategy for recovery. The first stage of the process has been successfully completed. We now intend to build upon this so that recovery leads into a period of

Turnover increased by 18 per cent to £100.5m (£84.9m) with particular strength in overseas markets. Overall sales per employee advanced

by 30 per cent. An operating profit of £6.39m compared with a £7.01m loss previously. The turnround was underpinned by a strong recovery in the space and marine division,

which achieved an operating

profit of £3.84m (£488,000 loss) on turnover up by 19 per cent to £46.1m. The aircraft and cargo han-

dling division reported an £334,000 operating profit, com-pared with a £756,000 loss, on turnover increased 16 per cent to £28.8m. The electronic component distribution division increased

operating profits by 61 per cent to £2.22m (£1.88m) on turnover up 19 per cent to

Net interest costs were reduced to £1.17m (£2.74m), partly reflecting a decline in borrowings which fell to 29.5m (£13.8m), equivalent to gearing of 39 per cent.

Trans World, has signified its

Hemingway £30m purchase

Hemingway Properti yesterday announced that it had agreed to buy a portfolio of nine properties for £30.2m cash, writes Vanessa Houlder. The portfolio comprises a 156,000 sq ft shopping centre on the outsitirts of Bristol, a 44,400 sq ft shopping centre in Bln-gley, West Yorkshire, industrial estates in Salford, Willen-hall, West Midlands, and Newton Abbot, Devon, a Peterlee, Durham, factory unit, and office buildings in Sheffield, Luton, and Banbury, Oxford-

After this acquisition and the purchase of the Templars Square shopping centre earlier this month, Hemingway will have a property portfolio of £140m, of which £120m has been bought in the past 12

Snacks setback at JLI Group

A setback in its snack foods Operations was behind a decline at JLI Group in the year ended March 31. Trading profits at the snacks

and ingredients maker showed little change at £5.85m (£5.95m) but after carrying restructuring and reorganisation costs of £1.15m, pre-tax profits were down by the same amount at £4.06m. Turnover of £111.6m (£104.7m) included £3.89m from acouisitions On a divisional basis food

services reported operating profits of £2.45m (£2.06m) on turnover ahead to £42.1m (£40.7m); food ingredients increased to £2.56m (£1.53m) on sales of £38.5m (£31.2m) but snack foods fell to £1.41m (22.86m) on turnover of £31m (£33.8m).

Mr Yoav Gottesman, chairman, said the company had tackled underperforming areas and addressed changes in its market, and the current year had begun in line with expectations. He saw potential for growth "both organically and through strategic acquisi-

The final dividend is raised to 3.2p, making a total of 4.8p (4.65p) on earnings per share of 7.1p (9.3p)

Norbain

In a buoyant market for closed circuit television equipment. Norbain, the USM-traded security products group, more than doubled pre-tax profits from £1.01m to £2.32m in the

year to April 30. Turnover was up 77 per cent at £38.5m (£21.8m). An increased single payment of 2.25p (L5p) is recommended from earnings per share of 20.85p (12.99p). The shares added 9p to 412p,

a new high for the year.

Albrighton

Acquisitions helped Albrigh-ton, the USM-quoted quarrying concern, report pre-tax profits of £768,000 for the year to March 31, against losses of £358,000.

Turnover improved from £2.45m to £5.11m, including £2.13m from acquisitions, for operating income of £892,000 (£9,000 loss) with £418,000 from acquisitions.

From earnings per share of 1.2p (losses 0.6p) a total divi-dend of 0.5p (nil) is being paid with a proposed final of 0.4p. Mr Humphrey Wood, chairman, said that the closing months of the year had yielded

a more satisfactory flow of orders with signs of improvement in margins and prices.

Reduced project volume and further provisions for exceptional costs hit second half trading at Tex, a provider of consumables to the plastic, steel and energy industries.

As a result, the company fin-ished the year to March 31 with a pre-tax profit of £273,000, against a £94,000 loss, after exceptionals of £204,000

At the interim stage, Tex had turned round a £146,000 loss into a profit of £486,000, after £104,000 charges last time for factory closure and redundancy costs.

Turnover rose 25 per cent to 520 Rm (£16.7m), Mr Anthony Burrows, chairman, said the slow recovery from the recession had continued, reflected

in higher but erratic levels of

demand and pressure on mar-

Mr Burrows explained that although trading was improv-ing, it was not yet sufficient to recommend a dividend - the last payment was in 1990. Earnings per share were 2.4p

Vega

Vega, the software and systems engineering group, reported pre-tax profits ahead 45 per cent from £1.48m to £2.15m for the year to April 30. Turnover rose £1.6m to £9,7m. Last year's figure was after a

£227,000 exceptional charge representing flotation costs. Stripping this out the pre-tax advance was 26 per cent. Earnings per share emerged at 10.01p (6.38p) and an improved final dividend of

2.075p is proposed, making 3.11p (2.78p) for the year.

A recovery in the second six months enabled GEI Interna-

tional, the packaging and processing machinery group, to report pre-tax profits for the year to March 31 slightly ahead at £2.13m, against £2.1m. The company said second half profits were double those of the previous year. After

proposed final of 1.5p. Last year's total was 4.94p.
Turnover was £77m, against unable to satisfy itself that £78.8m which included £516,000 from discontinued activities. Earnings per share were 3.56p,

against losses of 1.62p. Last year the tax charge was higher at £1.2m (£820,000) and there was a ACT write-off of £1.5m.

Caledonia ahead 26% to £45m

By Simon Davies

Caledonia Investments, the investment vehicle controlled by the Cayzer family, yesterday announced a 22 per cent increase in its net asset value during the 12 months to March 31, from 559p to 681p.

Pre-tax profits increased by 26 per cent, from £36m to

The bulk of the growth came from the associated trading companies, primarily Bristow Helicopters and Exco, which increased their contribution from £12.2m to £23.7m.

The results were in line with analyst's expectations, and the

shares were unchanged at

688p. Bristow was only owned for 9 months of the 1992-93 year, but the company had a strong year in 1993-94, repaying £36.5m of debt to reduce the total to £79m.

Mr Peter Buckley, chairman, said a weaker oil price had led to a tougher North Sea market, and Bristow's earnings were likely to decline in the current

Exco, included for seven months in 1992, contributed £41.5m, up 52 per cent, in the year to December 1993 aided by a surge in volumes in the goveroment securities market.

Exco's flotation should be launched next week, but Caledonia has said that it will maintain its 27.3 per cent stake. The flotation will not affect the stake's book value, but it could substantially boost external valuations of Caledo-

nia's worth. The industrial division, principally 75 per cent-owned Amber Industrial, contributed £5.8m (£3.8m) which included £700,000 from the sale of Cause way Steel Products.

The property and services division suffered a loss of £1.8m due to a £3.7m provision against valuations. The company has a broad

spread of smaller investments. These include a 23 per cent stake in Close Brothers, the merchant banking groop, which is now worth about £51m after a profits turnround last year. Caledonia is proceeding with

a 33 per cent stake in Sun International, which recently invested in a \$125m (£82.2m) resort development in the At the year end, Caledonia

had cash and short-term deposits of £59.2m. The recommended final dividend of 10.8p makes a full-year distribution of 18.2p (15p), up 8

"We have now got to the critical size we want to be, with annualised turnover of about £27m, with the Simon-Macawher purchase adding 214m annual sales," said

<u>ស្</u>រីម៉ាព្រ នេះជី

Clyde Blowers, the maker of equipment for boiler cleaning and materials handling, incurred a pre-tax loss of £514,813 in its seasonally unfavourable half year to the end of February, compared with a deficit of £17,632 last time.

The result was in line with forecasts made in April. Turnover nearly trebled, from £2.27m to £6.14m.

Clyde has been transformed since Mr James McColl bought a 29.9 per cent stake in 1992 and became executive chairman. In 1993 the company bought Sturtevant Engineering, a Brighton-based maker of

pneumatic conveyancing equipment, and Boiler Products Engineering, a boiler cleaning concern based in Belgium. In April this year it bought Simon-Macawher, a maker of pneumatic pressure and vacuum conveyancing equipment, from Simon Engineering for between £4m and £4.5m, funded by a £5.2m rights issue.

Mr McCoil said the loss reflected the continued restructuring of the core com-pany and its acquisitions, and to the fact that the first half is traditionally slow because of weak orders for spare parts in the winter. He expected a profit for the full year, profits for the 12 months to end-Angust 1993 amounted to £205,000. Mr McColl. "We're going to concentrate on organic growth rather than acquisitions

discount food store. The development potential of the rest of the site is being examined and the company may move to a better facility.

for acquisitions which would return it to profitability after three years of losses.

The search anded with a familiar partner - BBA Group. The engineering company, which effectively gave birth to United in 1988 by selling it stakes in United Spring & Steel Group and Ratcliffe Industries, attracted Mr Brown's attention last August when it unveiled plans to sell up to 12 subsidiaries with a combined turnover of £200m.

Following lengthy negotiations, United last month announced the £25m acquisition of three BBA businesses Holden Hydroman, Perplas and Railko, funded with a 236m pla-

cing and open offer. Ironically, the deal, which doubled the group into a business with turnover of £60m a year, probably would not have Encouraged to think big, taken place had it not been for United began casting around tha steady fall in United's "At BBA these businesses

While declining to predict

the future shape of the group,

Mr Brown has indicated his

determination to concentrate

ties of the acquisitions.

There is also a growing awareness that some United products might sit more comfortably within other groups, but wary of demotivating its workforce, the board declines to specify its main areas of concern.

Nevertheless, some industry analysts believe the materials handling business, which makes automated etorage systems, may be sold. They point to United'a recent mine month results, showing losses of £1.5m, in which it highlighted very difficult condi-

tions in the division. Cautious by nature, Mr Brown says only: "We cannot have any weak positions. Something which isn't strong, I'd like to see in other hands."

He is, meanwhile, pressing ahead with a reappraisal of group strategy and instilling his expansive vision of a business which can no longer rely on sales in Britain and Europe alone. If his gamble pays off, the latest acquisitions will provide the springboard to new markets and product areas.

Predicting a return to profitability this year, he says: "We have to grow and put more emphasis on marketing, then volumes will come up. That is the key to our survival."

Hilclare broadens security interests

المساورة والمراجعة <u>مسعو</u>ر والمراجع المساورة والمساورة والمراجعة المساورة والمراجعة المساورة والمساورة والمراجعة

By Gary Evans

Hilclare, the USM-traded maker of lighting and security products, yesterday announced that it was paying up to £3m for First Security (Guards) and was making a placing and open offer to fund the £4.95m cash element of the price.

Hilclare's sbares were ispended at 43p yesterday at the company's request, and will remain suspended until July 19 following an annual meeting on the preceding day to approve the deal.

Mr Ian Quinlan, chairman, said that Hilclare aimed to concentrate future operations in sectors of the security industry which would be selected for their potential to generate significant profit

growth and cash flow. FSG, which provides security guarding services almost exclusively within the area bounded by the M25, was "the first stage of this strategy".

Of the initial £8m consideratton, £4.95m is payable in cash, \$2.85m in new ordinary shares and £700,000 in secured convertible losn stock. A further £1m is due if FSG achieves specified profit tar-

Samuel Montagu has conditionally underwritten a plac-ing of 21.52m ordinary shares at 23p, giving Hilclare a market value of £8.4m - 4.8m of the shares were subject to an open offer to qualifying share-holders, also at 23p.

Hilclare also yesterday innounced a pre-tax loss of £482,000 (£54,000) for the year ended March 31, after making a £396.000 exceptional charge this time for its withdrawal from the production of control panels for security systems. Turnover fall to £2.64m

(£2.9m) and operating profits on continuing operations slipped from £100,000 to £43,000. The recommended single final dividend is an unchanged 0.5p. Mr Quinlan said trading in

the current year had started well for the enlarged group. The chairman said Hildare intended to change its name to Orbis and was planning a move to the main market.

Prudential buys Wimpey share of Little Britain

By Vanessa Houlder, Property Correspondent

George Wimpey yesterday announced that it had exchanged contracts to sell its 50 per cent share of the Little Britain property scheme in the City of London to the Pruden-tial, the life assurance company, for 295m.

The 473,000 sq ft office building, which was completed in 1991, is at the end of London Wall and is occupied by Clifford Chance, a firm of lawyers. Nippon Life owns the other 50 per cent of the property,

August 1991. The freebolders are the Corporation of London. The deal is expected to be completed next week. It has an initial yield of 7.5 per cent. Mr Joe Dwyer, Wimpey chief executive, described the sale,

which equates to its book val-

ues, as satisfactory. "Consist-ent with our strategy, it is a

further significant step in real-

ising our portfolio assets for investment in our core activities," he said.

The sala is in line with Wimpey's strategy, announced three years ago, of disposing of

which it bought for £110m in long term property investjust £60m of investment property to dispose of, most notably its Vantage West project io west Loodoo, which will be sold once it has found a

> Prudeotial said it was interested in making further prop-erty acquisitions. "Notwithstanding the size of this purchase. Prudential are still in the market for further City investments where the long term returns are attractive. said Mr Howard Dawson, Pru-

High stock market activity helps ShareLink to £6.19m

By Paul Cheeseright, Miclands Correspondent

SbareLink Investment Services, the share dealing company which floated last July, almost doubled annual profits after a year of unusually high stock market activity. Immediate prospects, however, are more subdued.

Pre-tax profits were £6.19m in the year to March 31, against £3.12m. The comparative figures have been prepared as if the group then existed in its present form.

Turnover rose to £23.3m (£14.3m). It was bolstered by the third British Telecommuni cations privatisation issue, a more than doubling in the amount of personal equity plan funds under administration and rising subscriptions to information services.

However, the company warned that trading volumes on the UK equity market had declined since February and thet "if these conditions were to persist throughout the current year, ShareLink's earn-

ings would suffer". Mr David Jones, the chief executive and biggest single shareholder, said, however: "I don't think we'll see volumes go down. The only debate in ShareLink is when the upturn will take place."

The group announced that it

tiations" but said there would be no immediate moves. He added that SbareLink was planning to enter mortgage broking and selling, although

not with its own capital. ShareLink's immediate aim is the expansion of its services outside simple share transactions so that it reduces dependence on what can be a volatile stream of income. "If we convert 20 per cent of gross turnover into fixed earnings, then we'd have 200,000 account holders and £1hn under administration," Mr Jones said.

Earnings per share rose to 26.11p (12.65p). A proposed was preparing moves into final dividend of 6p brin Europe and North America. Mr total for the year to 9p. final dividend of 6p brings the

Glaxo signs migraine deal

Glaxo, Europe's biggest drug company, has signed another deal in a string of collabora-tions with biotechnology companies. The company has bought most of the world-

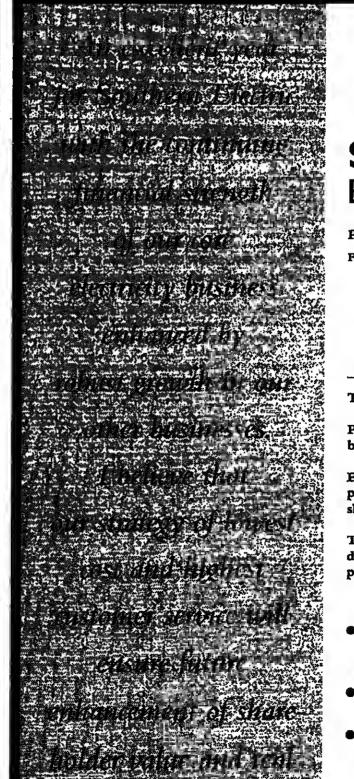

wide marketing rights to migraine treatments developed by Spectra Biomedical, a California The terms of the deal were not revealed beyond a three year agreement for research

payments and that Glaxo would pay royalties to Spectra on product sales. Glaxo is seeking to develop a successor to its current migraine treatment, Imigran, which is one of the its fastest growing products. The tie-up with Spectra takes to 12 the num-

ber of biotechnology collaborations established by Glazo. It is the first in migraine. Spectra'a approach is to try to determine the genetic basis for migraine,

This is the first collaboration for Spectra, an unquoted company started a year ago by Mr Stephen Peroutka, formerly head of neuroscience at Genentech, the Californian biotechnology company which is 60 per cent-owned by Roche, the Swiss drug company

Mr Peroutka said the number of staff was likely to double to 20 over the next 12

One Southwark Bridge, Landon SE1 9H

he disruption to Britain's railways by striking signal-ling staff seems as good an excuse as any to take a fresh look at the merits of teleworking.

It may be that this form of employment comprises part of your working week already. A Department of Employment study in Febmary found that one in 10 employers had at least one home-based worker and BT has estimated that by 1995 2.25m people will be working from home three days or more a

For the rest of us, it is perhaps one of those employment ideas that has been shelved in the rainy day file to be pulled out, dusted down and re-examined with the toast and marmalade as we face the prospect of lengthy traffic queues on the way

The idea of teleworking is nothing new. The advent of the personal computer, modem and the Fax machine make working from home, in theory, a far more feasible propo-

Information technlogy developments accompanied by greater availability, quality, reliability and cheaper prices have led to increas-ing numbers of amployees often deciding that there are different ways to organise their workloads. Noel Hodson, director of Strategic

Time to let the train take the strain teleworking consultancy, has stud-

by employees outside the policies of When he investigated teleworking at the World Bank headquarters in Washington he was informed by its personnel department that it did not exist there. An inquiry among information technology specialists however, revealed they had estab-

ied the prevalence of what he terms "tacit teleworking", where it has been adopted almost unconsciously

1,000 teleworkers a day. "This meant that the equivalent of 240,000 man-days a year were being worked outside formal systems. The personnel people were rather cross when they found out,"

lished communications links for

The spread of tacit teleworking is such that some organisations are unclear how many of their employees are what might be termed "in station" at any one time. Dr Frank Becker at Cornell University carried out a survey of empty desks in a number of companies and found 70 per cent unstaffed in some offices.

Teleworking often evolves natu-

by an outside event. Within hours of the Los Angeles earthquake last year, thousands of telephone lines were being installed in peripheral offices allowing people to work outside the city. In the UK, the immediate stimulus may be transport problems caused by industrial action

hut high office rents have also driven the trend. Digital, the US-based computer company, began introducing tele-working among its employees six years ago: now 40 per cent of its 4,000 UK workforce have modems or similar links for using personal computers and other communications equipment from home.

The latest stage in developing the concept involved closing down Digital's Newmarket office in April. The office, which used to accommodate 100 people, was replaced with a small tele-centre manned by nine staff and supporting 80 people working around it.

In-coming talaphone calls are taken by the Newmarket or Welling offices and re-routed to people's homes without tha callar knowing that they are speaking to

anyone outside an ordinary office. Ian Christie, Digital's marketing manager for flexible work services, said the reorganisation was saving the company about a third of a million pounds a year on direct prop-erty costs and running costs.

"Generally speaking the response has been very positive but it must be said that we have very few people who work five days a week from home. It is part of managers' responsibilities to have regular team mastings for which a three-line whip is essential," he

Teleworking has been criticised for divorcing employees from their normal social contact in the office but Christie argues that it can cre-ate greater contact if people ensure that they do not isolate themselves. "Instead of meeting the same faces around the coffee machina you make a much broader social circle." Christie says he often choses to work at Digital's head office in

Reading deliberately to pick up those unexpected contacts or jobs that tend to materialise in the con-

ventional office. Noel Hodson believes there is a

teleworking. He says that 18 per cent of all office time, the equiva-lent of almost a full working day, is taken up with office politics. Moreover, the time saved that would be normally spent commuting can be utilised for work.

He says: "I used to spend four hours a day commuting from my home in Oxford to north London. That was the equivalent to half a

working year."
Hodson adds thet the momentum for teleworking has grown mark-edly in the past year. He has just completed soma research which concludes that teleworking is going to increase the number of jobs by promoting what he calls the "24-hour society", already happening among some telephone sales organisattons unrestricted by normal offica hours. He estimates that equipping Europe with an "information super highway" adopting Inte-grated Services Digital Network lines – high quality computer links – and optic fibres allowing speedy computer communications will cre-

So teleworking takes a certain hardiness and confidence. Why not try it? If you're stuck at home, ate 3m jobs, although many of these strike-bound and haven't planned your day beforehand, it is probably

time outside work. Hodson suggests an action plan for setting up a tele-

working day:

Prepare two days work with all the files and stationary you need. Organise a work area and make it clear to your family that this isn't

a day off. • Circulate telephone and Fax numbers and agree how often you need to stay in touch.

Managers, he says, should ensure that not everyone is outside the office and should afterwards review the benefits of part-time telework-

ing for the company.

There is a downside to teleworking among people who find it diffi-cult to draw the line between work and home life. Parents find it hard to explain that they are not always available to their children.

Often there is also a tendency for people who cannot let go of their work to do too much. If you don't fit that description you might take another tip; turn the sound down on the TV when when you answer the telephone. The echo of tennis

balls has a distinctive resonance. For more information: Telework-ing Explained by Nocl Hodson, pub-lished by Wiley and Sons, price £25.

SUTHERLAND & PARTNERS (EDINBURGH) LIMITED

study suggested that 50 per cent of UK jobs overall could be teleworked

and predicted that 15 per cent of all

work could be sourced from home

by the end of the century, equiva-lent to 3.3m jobs.

These predictions may turn out to

be over-enthusiastic because of the

inherent resistance to working from

home among many people and indeed some companies.

These seem manifest in a number

of anxieties. There is an innate

desire to be seen to be there and

doing something. We dare not be away. It may not be an idle fear. Reading the other day about purges

instigated by Mao Zedong during the Cultural Revolution it was

noticeable how many party officials

were denounced simply hecause

they were absent at tha time of meetings to discuss potential recal-

citrants. Corporate Britain may feel

far removed from this but office plotting is not unknown.

ACCOUNTANCY COLUMN

Independence not a suitable case for treatment

Walter Schuetze discusses the tensions he sees between companies and their auditors on this issue

s chief accountant of the US ance and in fact. In my opinion, an Securities and Exchange Com-mission, I want to raise a matter that I have found personally very troubling the issue of auditor inde-

The commission has stated repeatedly that the independence of auditors, both in appearance and in fact, is crucial to the credibility of financial reporting and to the capital formation process

Independence is an abstract concept, and it is difficult to define either generally or in its peculiar application to the certified public accountant. Essentially it is a state of mind. It is partly synonymous with honesty. integrity, courage and character.
Objective standards of indepen-

dence have been introduced into the accountancy profession's ethical codes. It is not enough for members to do what they think is right. They must also avoid behaviour which could lead to an inference that they might be subject to improper influences. The profession must be like Caesar's wife. To be suspected is almost as bad as to be convicted.

One issue that has vexed and bewildered me since I came to the commission two years ago is that of auditors not standing up to their clients on financial accounting and reporting issues when their clients take a position that is, at best, not supported in the accounting literature or, at worst, directly contrary to existing account-

To me, auditors giving way to their clients or subordinating their views to their clients', raises a nasty issue about independence, both in appearauditor's independence is jeopardised as much by his or her subordinating judgment about a financial accounting and reporting issue as it is by ent, losning money to a client, or bor-rowing money from a client - perhaps

At least insofar as money matters are concerned, if there were disclosure to the investor about that fact, then the investor would be on notice and could be guided by the facts, although I would definitely not advo-

cate such an approach.

Not so with the subordinated judgment, which is insidious. There is no way to communicate impaired or coloured judgment. No disclosure about it ever could be complete, or be trusted. Nor is there any way for an investor to make judgments about the effect of impaired judgment on the part of the auditor.

It is true that many new and complex issues reach my desk because there is an honest difference of opinion based on well-reasoned positions on all sides. In these cases, the staff works with the registrants and their auditors to resolve those issues through discussion, analysis of analogous literature, and compromise in many cases. Addressing those kinds of issues is a challenging and interest-ing part of my job, and I encourage registrants and their auditors to continue to bring these issues to the staff.

I also am aware (because I worked in public practice for many years) of the thousands of decisions that are made by auditors in their work where they insist on adjustments to financial statements that reduce net assets and income, or otherwise insist on financial statement reporting and disclosures that managements of their clients would rather not make - none

However, there have been too many times when accounting arguments made by registrants lack any reasonable foundation and, without being able to cite any authoritative support for the registrant's position, the auditor has acquiesced

In the last two years, many such proposals have reached us from regis-trants and their auditors. And they are not supported by just an engage-ment partner in a firm without con-sultation within the firm, but by partners from the national offices of the

ake the airline company which, with the support of its current and replacement auditors, pro-posed to classify as a current asset at the most recent balance sheet date the portion of the deferred costs on aircraft overhaul that were to be amortised to expense in the next year. Or the company that proposed to report an adjustment to tax liabilities that it discovered had been under-stated in a business it bought; not in its income statement in periods prior to the business combination, but in the adjustments arising in purchase

accounting. tants may have become cheerleaders for their clients on the issue of accounting for stock options issued to employees. In 1978, six of the then Big Eight accounting firms wrote to the Financial Accounting Standards Board suggesting that it should reconsider the accounting rules for stock

options granted to employees.
In 1984 and 1985, when the FASB began reconsidering the issue, all but one of the Big Eight wrote supporting both a reconsideration of the accounting rules and a charge to compensation cost/expense for all options granted to employees. But, in February 1993, even before

the FASB issued its exposure draft on the subject on June 30 1993, all of the Big Six accounting firms joined forces with certain members of industry and a group of users to recommend to the FASB that there be no formal recognition for the cost of stock options.

The firms did not offer an explanation for their change of mind. Anyone could change their mind; I have done so on several accounting issues over the years. But I think the public deserves an acknowledgement by the firms and the reason why.

Such a change in position, without a corresponding change in the underlying concepts and issues that led the firms and the American Institute of Certified Public Accountants initially to support the board's project, has left some members of the public with the impression that the switch was in response to the fear of losing clients or other forms of retaliation.

Could continuation of these trends be anything other than an invitation to Congress, the SEC and other regulators to regulate more heavily, and directly, the auditing profession in particular and financial accounting and reporting in general? Could it lead investors, particularly institutional investors, to find alternative ways to corroborate issuers' represen

tations in their financial statements? The examples cited represent a small - some might even argue insignificant - number of exceptions to the generally outstanding manner in which the profession carries out its duties as public watchdog. But individual practitioners and firms need to be mindful that the number of such instances that may poison the well with regulators, legislators, investors and the public is small indeed.

These comments do not come from

an ivory tower. I have lived and worked in the accounting profession for more than 30 years. I know the realities of saying "no" to a client. I know the disappointment some cli-ents express when the auditor makes a decision to support an accounting proposal that may reduce those cli ents' reported earnings. I know the long and often heated phone calls and client visits, the strain, and the finan-cial cost that follow such decisions. But I also know the rewards: a clean conscience and not having to worry about losing law suits based on the merits, and pride in the profession

accounting and reporting.

I hope that the profession and registrants will, through self-restraint, take a fresh look at these indepen-dence issues and let nothing stand in the auditor's way of telling the truth

and the credibility of financial

as he or she sees it. The views expressed by Mr Schuetze are a condensation of a speech given by him in January in his personal capacity and are not necessarily those

DIVISIONAL FINANCE DIRECTOR

A major challenge in a customer driven Engineering business

£50k+ potential + benefits

Our client is a major group with worldwide operations in engineering based activities. They currently have a need for a Finance Director who will be key towards the strategic development of the business in a major division that has diverse activities, predominantly serving the automotive industry to their JTT requirements. Management Accountant

International Corporate Accounting

Wembley Park

£Attractive

McDermott International is one of the world's leading energy services companies, employing over 28,000 professionals worldwide. Through our various engineering operating divisions in the UK and overseas, we provide design, project management, fabrication

and installation services to the oil and gas industry. Reporting at Group Management level, we have an exciting opportunity for an experienced Management Accountant to gain entrance into international corporate accounting. The position will involve consolidation of divisional results, preparation of financial plans and budgets, monitoring and analysis of projections and reports for management. Some financial reporting will provide the opportunity for foreign travel and there may be the opportunity for an overseas posting as part of career development.

You should be a qualified accountant of graduate calibre ideally trained with a 'Big 6' firm and should be a self starter. PC and Financial modelling skills together with excellent written and oral communication skills are essential. The salary and benefits package will be all you would expect from a large international company.

If you are interested, please send on up-to-date career resume quoting current salary to: Mr Paul Piper, Senior Personnel Officer, McDermott Engineering (Europe) Limited, McDermott House, Empire Way, Wembley, Middlesex HA9 ONN.

CHIEF ACCOUNTANT

£29K - £35K

Winchester

The Independent Television Commission, which is the statutory body responsible for the licensing and regulation of independent television, is seeking a Chief Accountant who will be responsible for its internal financial functions. The ITC's turnover is £17m a year.

With the support of a small group of staff, the Chief Accountant's role will involve financial management and control, the timely production of financial management information, annual budgets and statutory accounts. The department is also responsible for the payroll, Tax and VAT.

Candidates must hold an appropriate professional accountancy qualification, preferably ACA or ACCA.

Considerable experience at management level in a commercial environment or the public sector is required. Candidates must have a highly professional approach, strong staff management and communication skills and the ability to organise and control work flows in an efficient, effective manner.

A competitive salary, depending upon experience, is offered together with a range of benefits which includes private health insurance.

Please send a full CV to Christine Chalk, ITC, Kings Worthy Court, Kings Worthy, Winchester, Hants SO23 7QA by July 4 1994.

WE ARE AN EQUAL OPPORTUNITIES EMPLOYER.

BBGTELEVISION

Senior Production Internal Auditor

BBC Drama Group

BBC Drama is a major source of drama output with productions ranging

from EastEnders to Screenplay and Middlemarch to The Snapper.

Drama accounts for one third of the BBC's network television budget.

Drama Group Audit's responsibility is to provide assurance to senior management on Drama's system of internal control, the integrity of its accounting records and the validity of production financial reports.

We are looking for an individual who has the skills, both technical and

interpersonal, to carry out reviews across the whole range of Drama output. The role is a challenging one as it will involve significant liaison with non-financial staff and the employees of Independent TV Production

The successful candidate for this position will be a qualified accountant with audit experience gained either in industry or public practice. A good knowledge of business procedures and computerised accounting systems is essential, as is the ability to demonstrate initiative and a willingness to assume a high level of responsibility. Experience of television production techniques would be advantageous but not essential. Salary will be determined by qualifications and experience, the position

will be based in West London. For further information contact our recruitment adviser Jon Vonk at

Marks Sattin, Financial Recruitment Consultants, 18 Hanover Street, London W1R 9HG. Telephone 071-408 1312. Fax 071-355

THE BBC IS WORKING FOR EQUALITY OF OPPORTUNITY

MARKS + SATTIN

Global Investment Bank

As a fully integrated international investment bank and securities house, our client has developed an outstanding reputation across all major markets. In particular, this includes a substantial presence in the issuance of securities, structured products and significant trading in global derivatives.

The mandate for the audit function is defined by the most senior management in conjunction with the audit committee, giving it a uniquely high profile, genuine independence and a particularly proactive brief.

Reporting to the Audit Director, you will be responsible for developing audit plans for substantial parts of the business and ensuring their execution through coordinating the activities of a qualified team. This is not a policing role and, as such, you will work closely with line management to improve areas of operational and control weakness with the emphasis on risk management. This is a period of considerable growth and development into complex new product areas and the audit team is expected to play a positive role in this process.

c£50,000 + Banking Benefits

Aged in your late 20's to early 30's, you will have an excellent numerate academic background and at least 4 years' post qualified experience concentrated within the banking sector. This experience may have been developed within another major bank or the profession. In addition to strong intellectual and technical skills you will possess the management ability and personal presence to further enhance the credibility of the function.

This opportunity should be seen in the context of a constructive career move offering a breadth of commercial experience and high profile exposure not available within more narrowly defined financial or product control roles. Longer term prospects therefore exist in a variety of areas including risk management, financial control or credit.

Interested applicants please call Neil Taylor or Tim Musgrave on 071 240 1040, or alternatively send a full resumé quoting ref 22/1745 to Morgan & Banks Plc, Brettenham House, Lancaster Place, London WC2E 7EN. Fax number 071 240 1052.

DIVISIONAL FINANCE DIRECTOR

Major Financial Services plc

Southern Home Counties

c. £75,000 + benefits

Our client is one of the UK's best known financial services groups, with well over £30bn of funds under management. With a substantial customer base, the company has a reputation for product innovation, financial strength, marketing and its high quality service.

The Divisional Finance role is one of the senior operational finance positions within the Group. It provides financial and resource management direction to the Division which employs circa 1800 people and controls e large self-employed sales force.

- As a member of a seven-strong Board, you will report to the Divisional Managing Director and head up a team of professional managers responsible for 300 staff.
- You will provide a comprehensive financial management service to the Division - as well as being accountable for human resources and legal policy issues within this part of the
- A graduate ACA, you will have managed at senior levels within the profession. You will probably be running a substantial line department.
- With a track record of implementing change, exposure to best financial management practice is essential. Personal qualities will include clear leadership skills, rigorous analytical capabilities and sound strategic thinking.

Career prospects are excellent - either in further senior financial roles within the Group - or into general management. It is unlikely individuals earning less than £60,000 will have the appropriate experience.

For a completely confidential conversation call Philip Taptildis, or write to him enclosing your CV.

The Coal Authority

As part of the privatisation of British Coal, the Government is establishing a new public body, the Coal Authority, with a brief to facilitate coal mining operations. It will take over British Coal's ownership of coal reserves; and be responsible for licensing coal mining operations; dealing with physical liabilities arising out of past mining which cannot be privatised, eg. subsidence damage claims and abandoned mine shafts; managing and disposing of property; and maintaining and making available mining records.

We are now looking to fill a key position, which will report direct to the Chief Executive. The Head of Finance/Administration will be a new and challenging post which will be instrumental in the successful establishment and running of the Authority. The appointment is subject to Parliament enacting the Coal Industry Bill, which has passed its Second Reading in both Houses.

Head of Finance/Administration

Managing an internal team plus bought in services, you will be responsible for the smooth running of the Authority's Finance, IT, Personnel and Administration functions. You will also provide financial advice and prepare the Authority's annual report and accounts

Ideally a qualified accountant, you will have at least ten years experience in public or private sector financial management and a sound understanding of public finance and commercial accounts. You will be computer literate and your strengths will include finding practical solutions to problems. You will have excellent "people" skills.

The appointment will be for a period of three to five years. The Coal Authority's Headquarters will be in Nottinghamshire.

Please send your CV by 29th June 1994 to Recruitment & Assessment Services. Alencon Link, Basingstoke, Hampshire RG21 1JB. Fax (0256) 846660/846374. Please quote Ref. B/2194/95.

An equal opportunity employer

GROUP FINANCIAL CONTROLLER

HARROGATE

to £45,000 + 2 CARS + BENEFITS

Appleyard Group PLC is a national retailer of passenger cars and commercial vehicles, with a substantial contract hire business. Operating from more than 60 sites, the Group Head Office is based in Harrogate, North Yorkshire.

Following a period of rapid expansion, a vacancy has arisen for a Group Financial Controller, reporting to the Group Financial Director. In addition to performing the functions traditionally associated with this role, the Controller will be required to provide financial and commercial support to the Group Managing Director, Passenger Cars. He/she will also be responsible for the financial appraisal of potential acquisitions.

The successful candidate will be a graduate Chartered Accountant, aged mid-thirties, with at least ten years post-qualification experience, some of which must have been gained in the motor retail or other multi-site retailing sectors. Essential qualities include strong technical competence coupled with commercial awareness and good communication skills.

This post offers a challenging career opportunity to the individual with the requisite qualities by providing corporate experience at a senior level together with involvement in the commercial aspects of a successful and expanding national motor group.

Applications should be made in writing by 4 July to: Tony Broadfoot, Group Director of Personnel, Appleyard Group PLC, Windsor House, Cornwall Road, Harrogate HG1 2PW.

No agencies please.

FINANCIAL TIMES
EUROPE'S BUSINESS NEWSPAPER

By Our Commodities Staff

Leading contracts at the London Metal Exchange built on Wednesday's rally yesterday with copper touching fresh 21-month highs at one point. But oil prices and soft commodities extended their falls.

Having tested downside suport on Wednesday morning the LME copper contract chal-lenged overhead resistance in early trading yesterday, when the three months delivery position peaked at \$2,507 a tonne. But profit-taking was attracted at that level and the market quickly shed about \$30. Renewed buying took it back to \$2,483.50 a tonne at the

close, up \$32 on the day. Dealers did not think that the stalling of the rally signailed the end of coppers' bull run, which has eeen prices soar from 1994 lows of \$1,725. "It looks to have found good support on the dips and should bounce back towards \$2,500," one told the Reuter news agency. He added that today's stocks in LME warehouses

"could be the key".

The earlier highs were attributed mainly to robust demand in after hours trading on Wednesday, which sparked covering against short posi-tions, speculative interest and

Chinese buying.
Aluminium was also lifted early in the session by reports of Chinese buying and fresh speculative interest. At one tage the three months position hit fresh a three-year high of \$1,492 a tonne before easing back in line with copper. It closed at \$1,487.50 s tonne, up \$16 from Wednesday.

Lead received a boost from commission house buying and European trade interest, which helped to lift three months metal from a late afternoon low of \$555.50 a tonne to \$560 in after hours trading. Although oil prices fell yes-

terday, traders remained optimistic that fundamentals were still positive and that the underlying upward trend was intact. The price of the benchmark Brent Blend for August delivery was \$17.10 a barrel in late London trading vesterday.

after having closed at \$17.46 on Wednesday.

Mr Lindsay Horn, trader at the London office of US investment bank Lehman Brothers. said yesterday's correction was tantamount to the market stopping to change horses". said Brent was holding

up well given the fact that most of the upward price pressure had been on West Texas Intermediate because of supply bottlenecks in the US Midwe At the London Commodity Exchange meanwhile robusta coffee prices continued their downwards movement after Brazil's announcement on Wednesday that it would sell

300,000 bags to exporters over the next two months. The September futures contract slipped by \$39 to \$2,240 a tonne, deepening losses made on Wednesday, when the New York market was weak. In spite of early strength.

cocoa prices followed coffee downwards on fairly heavy selling by speculators. The second position futures price in London fell by £25 a tonne to

Sugar industries respond to adversity

Canute James reports on efforts to revive flagging productivity in the Caribbean

ngar producers in the St Kitts-Nevis, the smallest last year," industry officials Caribbean Community, whose major market is the European Union, have been having a difficult time, and some have been forced into financial and administrative restructuring to improve efficiency and production.

The problems have raised mestions about the ability of some regional producers to meet their quota obligations to the EU and the US.

Regional industries have benefitted from new loans, others from the cancellation of lebts, the servicing of which had been a burden on their operations. Elsewhere industries have called on new managements as part of their estructuring.

These smaller producers in the Caribbean, unlike Cuba and the Dominican Republic, have been forced to concentrate on satisfying their lucra-tive markets in Europe, and some hava been driven to import sugar for domestic use. Combined production in the Commonwealth Caribbean countries fell by 3 per cent to

732,000 tonnes last year, with

producer, the only one to record an increase. The problens facing the region's industry are illustrated by the state of the sector in Barbados,

German sugar statistics agency F.O. Licht has cut its tie of 1993-94 world consumption to 113m tornes from 114.7m. The output estimate is revised down to 109.6m tonnes from 111.3m.

which is undergoing a US\$30m rehabilitation programme. The sim is to improve the industry's efficiency, increase the level of mechanisation and reequip mills, to enable higher

The island will have to import sugar this year to meet domestic demand because all output from the current harvest is being shipped to Europe to fulfil the quota to the EU. The industry will achieve its production target of 50,000 tonnes, but this is 4,000 tonnes less than the country's EU quota. The additional sugar for Europe will come "drawing

down on carry-over stock from

New Zealand hopes distribution deals will boost kiwifruit sales

say. They deny that sugar will be imported for transhipment to Europe as "it would be in contravention of our legal agreement with the EU for supplying sugar". The prospects for

improvement rest on the lanned restructuring of the industry and the administrative skills of Booker Tate of the UK, which has been contracted to manage the industry. The Barbadians are clearly hoping that Booker Tate can emulate the success it has had in Guyana where production last year was slightly below that of 1992 but 50 per cent more than 1991.

The importation of manage-ment skills four years ago was followed by a World Bank loan of US\$15m to the Guyanese industry for the rehabilitation of aspects of the industry, and to improve productivity. There irrigation and drainage systems in the industry. The growth in production,

which was dramatically evident in 1992, is continuing. Good weather and higher productivity lifted the country's

sugar production from the first of the industry's two harvests to 109,000 tonnes, 14,000 tonnes more than the first harvest of last year. The industry is anticipating combined production from both harvests this year at 250,000 tonnes, and if this is achieved it will he the highest annual output in the

Guyana will be able to meet its export commitments this year to the EU and the US, as well as satisfying domestic demand The financial restructuring of the industry in Trinidad and Tobago has also contributed to improved production. The gov-

past nine years, officials say.

ernment recently assumed debts of about US\$530m owed by the state-owned Caroni, the country's sole producer. The commeny also recently received new funds of \$21m for financing pre-harvest operations.
This relief, and an improve-

ment in the quality of canes and reduced labour unrest, helped to lift the country's sugar production from the 1994 harvest to 127,612 tonnes, 17,000 tonnes more than last year, and the highest in 20

years, according to industry industry easily to meet its export quotas to the EU and the US, and a further rise in production is forecast for next

Jamaica's hopes for significantly higher output then last year's 224,000 tonnes have been set back by prolonged labour unrest and bad weather. A strike by the industry's field and mill workers earlier this year to protest at the slow pace of negotiations between their unions and mill owners, and unseasonably heavy rains, have cut production by about 25,000 tonnes. The industry had been forecasting output of 245,000 tonnes this year.

The expected improvement was based on improved efficlency in the industry following the sale in January of four of five state-owned mills to local and foreign investors. Planned retooling of the mills and improvements to another four, which have always been in private hands, has led the industry to forecast national output in the next two years at about 350,000 tonnes a year.

'Chinese traders detained over LME losses

Three traders in Shanghai have been detained by the Chinese government in connection with their alleged role in operations that led to losses last year on the London Metal Exchange copper contract, according to Metal Bulletin

Fast Track, reports Reuter. Two of the traders worked for the metal trading department at the state-owned China International Trust and Investment Corporation and one was an employee of the Shanghai Machinery and Electrical

The traders are alleged to be responsible for large losses when the Chinese were unable to meet margin payments as copper prices rose.

Terry Hall explains the reasons behind a significant change in arrangements for handling exports to Britain and Japan T ew arrangements with bankers, the emphasis was on major fruit distributors in Britain and Japan mark a eignificant change for the New Zealand

kiwifruit industry, which in the past adopted a largely "do it yourself" policy in these The Kiwifruit Marketing Board, the co-operative body that controls all exports of the fruit, last month tied up distribution agreements with Geest in the UK and US group Dole in Japan to handle its fruit sales for the new season. Mr Eric Henry, the chief

executive says the development follows last year's restructuring of the board when, under pressure from

cutting costs and the size of the crop to manageable levels and reducing debts. This followed the devastating NZ\$90m loss suffered in the 1992-93 sea-

Pessimists were predicting the demise of the New Zealand kiwifruit industry at the start of last season, arguing that it was internationally uncompetitive. However despite another difficult year in Europe and Japan, Mr Henry says the industry has outperformed its New Zealand fresh fruit rivals "in terms of price, volume and grower returns"."

Total grower returns rose by NZ\$108.3m to NZ\$292.5m (£113m) in the year to December 31. Sales were up sharply, with the board selling 49.2m trays, or 89 per cent of the crop. It would have sold more had climatic conditions been better. For an unknown biological reason New Zealand grown kiwifruit did not keep as well as usual last season forcing the dimping of a substantial quan-

Mr Henry says that this condition could occur again this year, which is why the board is trying to sell as much fruit as possible in the opening months of the season.

tity in the closing stages of the

"This makes sense." he explains, "You get the highest returns then. After that costs start to climb for fruit in stor-

Weel When solling resumed in Australia on Tuesday prices generally were firm to uncharged. A slightly saster tendency appeared the next day, but by Thursday prices were again firm. However, the real test of values will come next week, at the closing sales for the 1963-64 sesson, when them will be substanted quentities of wool on offer. It is noted that there has been a late of inquiry for stockgibe wool, Last week's sales, reports Wool International, totalled 4,657 bales, of which 3,418 were for deferred delivery. At June 17 the stockgible

totaled 4,887 bales, of which 3,418 were for deferred delivery. At Jure 17 the stocipile amounted to 3,678,788 bales. While most trad-ers continue to predict a reasonably firm start to next season's selec, a key factor in the longer term is the reluctance of spinners to pay priose for tops which fully reflect corrent replacement costs. The market indicator was 627 o/kg on Thursday.

Only 6 per cent of New Zealand kiwifruit shipped to Europe is sold in Britain, Last year the country bought 2m trays, but Mr Henry hopes to triple this in three years. Most of the kiwifruit sold in Britain now comes from Italy, France

and Chile. Under the agreement Geest will provide a nationwide wholesale distribution and logistics service. The board will continue direct pricing and marketing policies, and for the first time will appoint e UK manager who will be based at Geest's headquarters.

Under the new structure the board will have direct access to the consumer market, giving it the opportunity to respond quickly to seasonal swings and to deliver tailor made promo-

tions to supermarkets.

The deal with Dole in Japan. is the first such distribution agreement the US company has signed. It is also the first time it has marketed fruit under a label other than its

Mr Henry says that this is a recognition of the strong image of New Zealand kiwifruit in the Japanese market. Japan, one of New Zealand's most important markets, last year bought nearly \$NZ200m worth of New Zeeland kiwifruit, which commends a substantial margin in that market.

Dole will undertake the storage and direct merchandising.

including preparing pre-pack items for supermarkets.

With the first shipments of the new season's fruit headed for export markets, Mr Henry says he is optimistic about prospects in most markets, apart from the US, where the anti-dumping order remains in

Before the order was introduced New Zealand was selling 4m trays there annually, but this season it will attempt to sell only 700,000 trays. That market is basically uneconomic," Mr Henry says.

The board will retain a role in the US market in the hope that the eventually the US will lift its open-ended antidemping measure.

Sell-off in futures undermines initial advance

By Terry Byland, UK Stock Market Editor

The London stock market suddenly developed e mind of its own yesterday afternoon, reversing an early advance to fall sharply in the direc-tion of the year's lows. Weakness in UK shares contrasted with firms in other markets, including the British government bonds sector.
In early afternoon, the FT-SE 100

Index dipped to 2,936.5, a fall of nearly 24 points and within 5 points of the closing low recorded at the beginning of this month.

The turnround from the 19-point gain at the market opening coincided with news that US durable goods had risen by a potentially inflationary 0.9 per cent in May; but traders also referred to general nervousness ahead of publication today

of the UK government White Paper on the pensions industry, which some analysts fear may urge that funds increase weighting in bond

markets The final reading showed the FT-SE 100 at 2,942.4 for a loss on the day of 18 points. Although trading in equities increased, the selling pressure cama through the stock index futures markets, where two large sellers, one of whom, at least, was a US firm, drove the September contract on the Footsie to a substantial discount and undermined the stock market.

Selling was not confined to the Footsie list but spread across the full range of the market. The FT-SE Mid 250 Index declined 24.3 to 3,436.9. However, non-Footsie etocks made up only about 45 per cent of the day's Seaq total of 540.2m

shares; on Wednesday, 463.3m shares were traded through Seaq, for a retail, or customer, value of £1.3bn, a return to healthy profit-able levels of equity trading for the London-based securities industry.
At first, UK shares followed trends in European bond and stock markets, moving higher as the US dollar steadled in response to the

assurances overnight from Presi-

dent Clinton and the US trade secre-

defended. But London equities appeared to part company with other markets in the second half of the session.

An outstanding feature was the collapse of shares in The Telegraph, together with losses in other UK newspaper shares, as e sharp cut in the Telegraph cover price indicated a significant upgrading of the UK press circulation war sparked off by price cuts by the Murdoch group publications. The Telegraph chare price fell by about one third and the London Stock Exchange announced

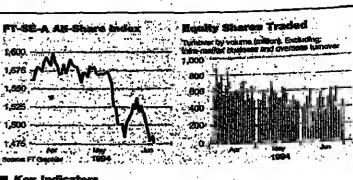

an inquiry into share dealings. There was also a fall in Mirror Group Newspapers, head-on rival with the Murdoch tabloids and also the new owner of The Independent, which also reduced its cover price, albeit for only one day.

Eurotunnel advanced at first in spite of some disappointment with the take-up of only 67.7 per cent of the rights issue. The stock lost its gain before the close and traders commented that the share price would be vulnerable to any further

and the second of the second o

shakeout in equity markets. London's concentration on its own concerns masked developme elsewhere. But strategists said that the clonds remain over the outlook for the US dollar and that markets would continue to look for more decisive action on the US currency than indicated by the US trade secretary.

Some investors had hoped for e cut in key rates from the Bundesbank yesterday and there was some disappointment when the German central bank made no move on its discount or Lombard rates.

Publishing stocks pre-empted the weakness in the London stock market as The Telegraph saw its chares sold heavily after joining battle in the price war started by the Murdoch

340p and closed 191 down at 349p with 6.3m shares traded, one of the biggest daily turnovers since flotation at 325p a share two years ago.

The Telegraph decision to cut its weekday cover price to 30p from 48p and the accompanying statement that revenue would fall by £40m this year sent analysts scurrying to lower their forecasts for this year and next. And news that The Times is to cut its price

further, announced after the market closed, is likely to cause further turmoil in the sector today. It also marked a significant scaling up of the price battle in the UK newspaper industry

and consequently sent shares in United Newspapers, owners of the Dally Express, down 83 to 510p, Daily Mail Trust down 178p to 1275p and Mirror

Group, which not only has e big stake in the Independent but is also suffering the effects of the price cut by Mr Murdoch's Sun newspaper, down 31 to 134p with 14m shares chang-The Stock Exchange is

believed to have launched a full inquiry into the Telegraph share trading. In particular, the Exchange will be looking very closely at when the company first began to consider cutting its newspaper cover price. A month ago, Hollinger, the Canadian company controlled by Telegraph owner Mr Conrad Black, offloaded 12.5m Telegraph shares at 587p and under Stock Exchange rules a

company cannot deal in its icant merger or takeover in the shares if it has undisclosed sector. price-sensitive information. Ms Lorna Tilbian of S.G. Warburg said: "All hell will break loose. You cannot place a stake on May 19 and have a price war on June 23." Ms Tilbian cut her current year profits forecast by £15m to £47.5m and her estimate for next year by £22.5m to the same figure.

Wellcome hint

Pharmaceutical group Wellcome was dragged down with the market, hut one leading IIS analyst was telling clients that the UK company could be the next target for a signif-

Vol. Closing Day's 000s price change

Dr Jonathan Gelles of Wertheim Schroder believes the US holding in Wellcome, officially about 3.6 per cent, has doubled in the past month. The performance of the shares reflects huying interest, probably from the US. Wellcome has outperformed the All-Share Index by 9.5 per cent, and the sector by more than 5 per cent, since the start of June.

Dr Celles argues that Wellcome Trust, which still controls 40 per cent of the company, is only interested in maximising profits in order to further research and would be quite happy to see a merger or acquisition. He believes tha company has e take-out value equivalent to about 900p a share. Yesterday the shares fell.

Unigate gain

Milk producer Unigate strengthened as rumours over the possible sale of its stake in Dutch group Nutricla resur-faced. Unigate bas a 34 per cent stake in the baby food manufacturer, most of which It gained when it sold Nutricia its Cow and Gates food business in 1981. Speculation over Unigate's next move have featured intermittently in the stock market ever since, with some suggestions that the UK group might at some stage be considering a full bid.

worth at around £250m Shares in Channel tunnel operator Eurotunuel relinquished a strong early advance

to finish a penny off at 278p. The group reported a 67.7 per cent take up of the UK part of its £858m rights issue. A quiet day's trading in Thorn EMI followed the release of the MMC inquiry into compact disc prices which dealers said had already been

discounted in the shares. The report cleared the record companies of collusion, a result which had been widely leaked to the market several weeks ago. Thorn also announced after the market closed that it had reached agreement on the sale of its defence business to Thomson-CSF of France. Analysts said the long-awaited dis-posal would hasten the demerger of the leisure group into its music and rental constituents. The shares slipped 2 to 1043p.

First Leisure slid a further 10 to 279p following results on Wednesday, considered by the market as mildly disappointing. However, tha continued weakness led some specialists to the belief that the shares could be undergoing a re-rat-

Metropolitan Grand retreated 15 to 390p on 6.7m. traded as Smith New Court trimmed its 1995 profit forecast . from £1bn to £957m.

Clearing bank TSB fell 9 to 211p after reporting half-year profits of £226m, up from £80m. previously and in line with market forecasts. TSB also confirmed market speculation that it intends to buy a

big building society.

A stock overhang was reported in components group T&N and the shares closed 3 lighter at 218p. Engineering group ML Heldings moved 4 ahead to 45p, after several brokers upgraded current year profit expectations following the group's return to profit. The company reported profits of £5.2m against an £11.2m loss the previous year.

A Rolls-Royce presentation to analysts and institutions in the City generated little enthusiasm for the stock leaving the shares a penny lighter at 181p, after trade of 7m.

Shares in business services group BET firmed a penny to 115p after NatWest Securities turned more positive on the stock. NatWest said: "With the risk factor much reduced, and personnel and textile rental sensitive to improving employment trends, we can no longer be negative on the stock."

Results from Southern Electric were at the top end of market forecasts and the shares ran up 6 to 559p.

There were mixed fortunes for four new stocks. Book publishers Bloomsbury Publications came to the market at 105p and was bought up to 110p, while VCI slid 9 to 141p. Property agency Chesterton fell 3% from its issue price to close at 100%p.

Dollar chases rumours

Wild rumours of a cut in German interest rates and concerted central bank intervention to support the dollar bounced the US currency around in narrow trading yesterday, writes Motoko Rich.

The dollar lifted on early morning rumours that the Bundesbank would lower the discount rate or set a lower fixed repo rate at its monthly central council meeting

Afternoon talk of a concerted intervention effort spiked up the US currency again but the central banks did not show their hands before the close in London, where the dollar ended at DM1.6035 from DM1.6006 and Y101.150 from

Sterling showed signs of independence from the US currency as it turned in a stronger performance against both the D-Mark and the dollar.

Traders were made tentative by speculation that the Bundesbank was about to cut its discount rate or set a lower fixed repo rate. They accordingly gave the dollar a boost towards the DML61 level in the morning, as they swaited the results of the Bundesbank's

central council meeting.

The dollar opened in Nsw
York down against the dollar
after Bundesbank president Hans Tietmeyer made the ambiguous remark that "the Bundesbank is not interested in a failing dollar". Hopes for a cut in German interest rates were further squashed when Mr Tietmeyer commented on the growth of the M3 money supply. "We believe the current interest rate structure would contribute to slowing in

M3 growth," he said. The markets grew jittery in the afternoon when rumours of coocerted central bank intervention circulated. But the banks staved out of the ring again, although some said the Fed bought some dollars on behalf of the Bank of Japan.

Analysts were beginning to doubt the possibility of group action by the central banks to support the dollar. "I think we have passed the time when the grand slam intervention that the market was afraid of will be needed," said Mr Michael

Feeny, economist at Sumitomo Bank. "I think the dollar is consolidating." After the release of figures for US durable goods orders in

May, commerce secretary Mr Ron Brown said the numbers were "a very good sign", indicating continued growth in the US economy with virtually nonexistent inflation.

US durable goods orders rose by 0.9 per cent, against expectations of a 0.5 per cent rise. In addition, US initial jobless claims last week were at 352,000, up from a revised

349,000 the previous week.
The markets treated the data with indifference although the figures for durable goods were better than expected. "Markets tend to react to figures either in a very positive or very negative way only if major figures go their way," said Mr Chris Dunis, economist at Chemical Bank. "Otherwise they tend to disregard the figures as not

■ Sterling rose steadily against the dollar and the D-Mark during the day, escaping from its recent slavish relationship to US currency trends.

"There was institutional buying of pounds," said Mr Rob Loewy, economist at Midland Global Markets, "It looked like half-year squaring off. The markets took profits against the first move above \$1.50." Mr Loewy said an improve

also helped the pound. "The markets have also focused on the government's tough on the rail strikes and recent indications that the government is attempting to keep public spending down," he said. "All of these things have encouraged sentiment for the

In the UK money markets the Bank of England provided £700m assistance at established rates after forecasting a shortage of £750m. The Bank also supplied late assistance of

The Swiss franc remained stable, although slightly lower, against the dollar after the Swiss National Bank said it was not intervening to support the US currency.

At its semi-annual news conference in Zurich, Swiss National Bank president Markus Lusser said he had no difficulties with the current D-Mark/Swiss franc exchange rate. Mr Lusser also said the exchange rate was not hindering the country's economic recovery, which investora interpreted as a vote of confidence in present interest rates.

■ The European crosses were stable throughout the day, with the lira and the peseta gaining some ground against the D-Mark. The German currency finished in London at L982.6 from L983.3 and at Pta82.98 from Pta83.24. Against the Swiss franc, it closed at SFr0.842 from SFr0.841. It closed unchanged against the

French franc at FFr3.422. Bank of Portugal governor Miguel Beleza's resignation did not affect the escudo, which was unchanged at Es103.4/D-

In the futures market, the December short sterling contract traded 26,000 lots to settle at 93.85 from 93.74. The December Euromark contract traded 47,000 lots to close at 94.85 from

Equities sag after bonds drift down

Wall Street

US share prices sagged lata yesterday morning in an unin-spired session which belatedly tracked a downward drift by bonds, writes Frank McGurty in New York.

By 1 pm, the Dow Jones Industrial Average was 9.51 lower st 3,715.26, while the more broadly based Standard & Poor's 500 was down 1.60 at 451.49.

In the secondary marksts, ths American SE composite dipped 0.77 to 432.45, but the Nasdag composite suffered its third big setback in four sessions, dropping 6.78 to 705.96. With relative calm returning to the foreign exchange markets. equity investors attempted to build on Wednes-

10 13 14 15 16 17 20 21 22 23 June 1994

day's 17 point advance. The dollar was helpful, climbing above Y101 on speculation that central banks were preparing to intervene to support the US currency. The rescue mission did not materialise but the dollar held firm nevertheless.

Bonds were supported early in the day by developments in the foreign exchange markets. The day's economic news was not uniformly positive but neither did it seem to present any

The Commerce Department said that orders of durable goods had risen by 0.9 per cent in May, against expectations of a 0.4 per cent gain, but most of the overall increase came from a rise in aircraft orders.

Meanwhite, the Department reported a gain of 3,000 in claims for unemployment benefit last week, while economists had expected a

slight drop.

Both sets of data pointed to s moderating growth rate which, on balance, is positive for equity investors hoping that the Federal Reserve will delay its next move to lift interest rates until late summer.

Still, stocks appeared to be in a holding pattern, with the activity in bonds or currencles, and the fresh economic data, failing to generate either excitement or disappointment. The blue chips were showing moderate gains by midmorning but tailed off as the afternoon began, mirroring a slow,

Cyclical issues were mixed. Paccar, a heavy-duty truckmaker, gained \$11/4 to \$461/4 but Eaton, a supplier of motor vehicle components, dropped \$1% to \$52%. Bargain hunters gave Caterpillar a lift after two losing sessions. Its share price, hit hard by jitters over a strike by union workers, gained \$1%

With a takeover battle for Kemper suddenly taking shape, the insurance concern's share prics jumped \$4% to \$63%, a new 52-week high. The trading followed a bid by Conseco to buy the company for \$67 a share in cash and stock, compared with a \$60-a-share cash offer by GE Capital, a General Electric subsidiary.

Invastors were uncertain which of the suitors had the upper hand, and so the share prices of both appreciated. GE climbed \$1% in very heavy volume of nearly 3m shares, while Conseco was marked up \$1% to

Eastman Kodak gained \$1 to \$47% after Sanofi, a French pharmaceutical group, agreed to buy the prescription drug activities of its Sterling-Winth-

rop division. After a one-day respite, the sell-off in the technology sector resumed. On the Nasdaq, Lotus Development dropped \$211 to \$33%. Wellfleet gave back \$2% to \$20% and Microsoft receded

Canada

Toronto stocks were slightly better at noon as the Canadian dollar and bonds strengthened. The TSE 300 composite index was up 6.85 at 4,059.03 in volume of 27.35m shares.

Declines led advances by 269 to 250 with 261 issues unchanged. Toronto's 14 subindices were evenly split, with gains in precious metals and property offsetting losses in oil and gas and communications.

The gold sub-index was 42.65 higher at 9,924.76 as London gold fixed at US\$390.10 per ounce, up from US\$389 earlier in the day. Franco-Nevada rose C\$% to C\$74%.

on news that the London Stock Exchange was investigating a 34 per cent fall in the shares of its UK newspaper subsidiary, Telegraph plc, after the company cut the price of the Daily Telegraph.

Brazil

São Paulo was up 22 per cent in local currency terms in thin mid-morning volume. Traders expected the market to be flat to firmer in the immediate short term, saying that the market was lifted by ongoing optimism over the introduction of the new currency on July 1. The Bovespa index rose 693 to 32,679 in low turnover of

S Africa fails to find spur

Johannesburg was mixed as undermined prices in the secthe generally improved mood following Wednesday's national budget was countered by a lower gold buillion price.

Trading was slow, as tha package failed to spur a hopedfor recovery in demand, particularly by foreign investors.

A stronger rand hampered export-oriented companies, especially gold mining issues, after bullion's softer showing

FT-ACTUARIES WORLD INDICES

tor. The overall index finished 17 softer at 5,688, industrials 21 st 2,222.

De Beers retrieved an early fall to end unchanged at R113.75. Anglos shed 50 cents to R238 and JCI R1 to R105. Iscor collected 5 cents at R3.63, adding to its 9-cent day. SAB was steady at R91.

Bourse recovery, but dollar fears revive

The dollar had a better day in Europe but renewed US fears of currency weakness after continental market hours, sent brokers pensively home, writes Our Markets Staff.

FRANKFURT tried to move on the news, or the absence of it, retreating from its highs aftar tha Bundesbank steady erosion in the bond announced that it would leave key interest rates unchanged for at least the next two weeks. The Dax index rose 27.68 to 2,022.10 on the session after a high of 2,038.54.

In the afternoon the bund future reacted by half a point after its earlier gains, said Mr Jens Wiecking at Merck Finck seldorf; equities followed suit, falling then recovering to end the day at 2,032.52.

Turnover rose from DMS.5bn to DM9.2bn. Deutsche Bank lost ground in the post bourse, ending at DM684.50 after a rise of just DML50 to DM688 on the session on exposure to debt markets, property scandals and recent talk of management Merck Finck was not looking

for a sustained equities recovery. "As the most important bond investors are still heavily over-invested", it said this week, "they will be inclined to use any recovery to reduce or unwind lossmaking bond positions. As a consequence, the

1350.34 1303.48 1345.33 1357.37 recovery potential for German bonds will be dampened in the weeks ahead, so that equities should not expect much sup-

times down at FFr24.70 as the takeup of the UK side of the rights issue came in above expectations, and the bourse authorities said that it had opened an official enquiry into the movement of the shares prior to the issue coming to the market. The result of the French side of the issue is expected early next month, and the takeup level is forecast to exceed that in the UK.

Euro Disney was one of the day's losers, off FFr1.50 at

MILAN held on to early gains, although it remained cautious in the absence of clear government action to tackle the budget deficit.

The Comit index rose 15.81, or 2.3 per cent to 707.44; but there was concern that further profit-taking could emerge at around the 710 point level. In contrast, the real-time Mibtel index finished 45 higher at 11.190, after a day's peak of 11.331.

The insurance sector remained under pressure ahead of Monday's public offering and private placement of 51 per cent of Ina, the state insurer. Generali slipped L150 to L42,100, Fondiaria dropped L430 to L13,230 and Ras lost L300 to L25,500.

The new shares of Mondadori, the publisher, finished at L15,480 as they made their debut compared with an opening L15,260 quote and the L15,000 offer price. The old

rights and are quoted separately, rose L684 to L15,984.

MADRID reacted to early strength on Wall Street, Iberdrola, Repsol and Telefónica accounting for some 40 per cent of the day's Pta29hn turnover as they rose Pta29 to Pta979, Pta135 to Pta3,995 and Pts35 to Pts775 respectively.

However, the outstanding gain, given the recent unpopu larity of banks on poor bond market trading experience, was a Pta500, or 4.8 per cent rise to Ptal1,000 for Bankinter, picked out with Banco Popular this week by Mr Bryan Crossley at Hoare Govett for their "almost irresistible combination of high rates of profitability, strong balance sheets and low market ratings."

AMSTERDAM made a hesitant recovery assisted by strength in the bond markets, helping the AEX index to a day's gain of 4.64 or 1.2 per cent to 387.38.

One of the day's best per-formers was Nutricia, the food group. There were reports, which the Dutch company denied, that Unigate of the UK might be considering the sale of its stake to Heinz of the US. Nutricia's shares added Fl 3.40 to F184.00.

Tokyo

The easing of the yen against the dollar and the parliamentary approval of this year's budget encouraged sentiment. The Nikkei 225 average immed 2.2 per cent, topping the 21,000 level for the first time in three days, writes Emiko Terazono in

The index gained 458.89 at 21,040.21 after a day's low of 20,637.43 and high of 21,068.01, recouping part of a 4.2 per cent fall seen during the previous three days. Arbitrage buying and purchases by financial institutions pushed shares higher, absorbing a steady flow of selling by arbitrageurs closing their positions.

Investors welcomed the decline in the yen from its record high against the dollar, and comments from US and halt the volatility. The longawaited passage of the budget for the current year also boosted investor confidence. Construction shares gained support on expectations of new public works spending.

Meanwhile, comments by the Socialist party, which had split from the coalition last April, hinting that it might rejoin the government, also heightened hopes that a general election this summer could be averted. The opposition Liberal Democratic party proposed a vote of no confidence yasterday against the current administra-

Nicholson in Cairo.

unless the Socialist party co-

The Topix index of all first section stocks climbed 32.27 to 1 681.24 and the Nikkei 300 rose 6.79 to 306.07. Gains outscored declines by 991 to 107, with 101 issues unchanged. But in London the ISE/Nikkei 50 index eased 1.28 to 1,369.44. Volume totalled 390.8m

shares, against 495m. Newly established investment funds were also buyers, but some investors remained inactive due to continued nervousness in the currency market. Domestic investors were buying blue chip manufacturers,

including steels and shipbuilders. Mitsubishi Heavy was the most active issue of the day, rising Y18 to Y792, and Kawasaki Steel put on Y11 at Y411. Mitsubishi Oil, which rose earlier in the week on reports

ered oil in Vietnam, eased Y10 to Y1,040 on profit-taking. High-technology issues, which have been battered by the recent surge in the yen,

rebounded. Hitachi rallied Y20 to Y1,040 and Sony Y50 to Y6,120. Automobile companies were also higher, with Mitsubishi Motors up Y11 to Y972. In Osaka, the OSE average advanced 362.38 to 23,321.57 in volume of 37.4m shares.

ith President Suharto at the helm of power over the past 27 years, stability has been the predominant characteristic of Indonesian politics and eco-

Now in his sixth term as president, however, Mr Suharto is giving increasingly frequent hints that he plans to make this term his last as head of state - although he remains as reluctant as ever to name a

Like the traditional wayang. a theatrical performance where shadow images are held in front of back-lit screens, Indonesian politics is not transparent and nothing is lear-cut. It is difficult to gauge Mr Suharto'a intentions, as it is certainly not the first time since he took power that he has hinted that he may step

And yet Indonesians are attaching more significance now to suggestions that he is planning an exit than they have done in the past. Mr Suharto will be 77 when his term ends in 1998 and there are signs that the jockeying for power has already begun.

The uncertainty is making some investors jittery. Perhaps in recognition of this, during the last year Mr Suharto has opened the doors just a little to demands for increased political openness, although direct criticism of his family's wide-ranging business interests and monopolies remains off limits in the domestic press.

It will require some skill to halance stability with

Indonesia is a huge country. Its 13,000 islands extend 5,000 km from one end to the other and its 187 million inhabitants include hundreds of different ethnic groupings and make it the fourth most heavily populated country in the

An increase amid stiff competition for foreign funds in neighbouring in investment is also needed to Asian countries. According to maintain the momentum of Mr Hartarto, the co-ordinating growth in the economy minister for trade and growth which has averaged 6 industry, deregulation of the per cent a year over the past 25 economy has taken on a sense

years. The latest deregulation

package comes on the heels of one of the biggest corruption scandals in Indonesia's history

Indonesian economy.

Foreign investors:
must struggle ag since independence, as the drive for political openness prompted Mr Mar'ie Muhammad, the minister of finance in President Subarto's cabinet, to expose the extent of bad loans at state banks.

The Bapindo hanking scandal, which involved an ethnic Chinese husinessman defaulting on loans received on recommendations made by former cabinet ministers, did little to help investors' confidence in the country although the revelations have highlighted Mr Muhammad's commitment to cleaning up the state banking sector.

None the less, this corruption case is symbolic of the problems that beset the growth, are constantly battling with technologists, who are led

by the country's enthusiastic minister for research and technology, Mr B J Habibie. Technocrats want to maintain austere budgetary

policies after the budget deficit widened significantly last year. Technologists want the state to pump hillions of dollars into heavy industry projects - such as, for example, aircraft manufacturing - which critics say are not making adequate commercial returns.

Foreign investors say they

in the Indonesian government President Suharto, the self-proclaimed "father of between "technocrats" and development". is credited with Technocrats, who have greatly reducing levels of poverty since he came to down a path of export-led power. Yet discrepancies in wealth in the cities, and the gap in average income between

the more prosperous islands of Java and Bali and the out-lying islands, is of growing importance to many government ministers.

This concern, together with nationalists' fears that an open economy will lead to too much foreign domination, could be forceful enough to limit further deregulation measures. The latest foreign investment deregulation package was well-received in the business community, but an attempt to deregulate the media sector was immediately squashed after outcries from nationalist quarters.

The non-oil export sector however, needs the deregulation in order to diversify and become less sensitive to swings in world demand and prices. Last year the non-oil export sector showed a slowdown in growth. There is a sense of urgency

about this, because Indonesia's economy is burdened with growing private and public foreign debt.

FOOD

The Group's agro-business activities help provide the most fundamental of all human needs - the need for food.

The Sinar Mas Group has roots in the vegetable oil business, having begun operations in this area more than 40 years ago. Today, the Sinar Mas Group has modern refineries producing edible oils and fats required by domestic consumers and food industries. The Group also owns and develops over 160,000 hectares of plantations devoted to oil palm, tea, coconut, cocoa and bananas. Through its vertically integrated stroeture, the Group has achieved significant market share in agro-industry while adhering strictly to the national standards of health, safety and environmental protection. SHELTER

From urban housing estates to

luxury botels, the Sinar Mas Group contributes to the essential human needs for housing and shelter.

As one of the leading developers in Indonesia, Sinar Mas ensures its diverse real estate projects are developed in harmony with the surrounding environment. The Group's interests include commercial real estate and office buildings, residential subdivisions and condominiums, shopping centers, industrial estates and golf course developments.

EDUCATION

As one of the leading exporters of pulp and quality paper to over 40 countries, and with its dominant share of the printing and writing paper market in Indonesia, Sinar Mas helps make learning possible.

Its subsidiaries, Tjiwi Kimia and Indah Kiat, provide a model for Indonesia and the world in waste management. including their exemplary waste water treatment processes. The Group also makes extensive use of recyclable paper products in its pulping operations.

The Group's activities in the pulp and paper industry adhere to strict environmental policies, including extensive reforestation projects and maximum use of forest plantations.

> **OUALITY OF LIFE** Sinar Mas works to echance the quality of life with its wide range of financial services. The Group operates one of the most profitable local private banks in Indonesia. Bank Internasional Indonesia (BII), which actively supports programs such as the World Wildlife Fund's endeavour to save the Javaocse Rhinoceros. Through its consumer marketing program, BII contributes to this project for every new credit card

> > Sinar Mas was selected to

participate in the government sponsored program "Care '92", designed to educate the public on environmental issues, including pollution control and recycling. The Group's activities in this program include providing loans to small businesses for waste management projects, and the purchase of materials for recycling

With the source of its business and inspiration found in nature, the Sinar Mas Group is committed to responsible development through its environmentally sound policies and

Just as the rays of the sun give life to nature, so Sinar Mas shares the benefits of its successes.

INDONESIA II

A growth economy faces some serious challenges, writes Manuela Saragosa

Protectionism does not help

community is full of praise for the Indonesian government's consistency in sustaining avorage annual economie growth of 6 per cent over the past 25 years, the cabinet's economic team, which took over the reins of power in April 1993, faces some serious

In order to maintain this momentum, the government estimates that it will need \$305bn in its new five-year development plan, Repelita VI. Some 73 per cent of that must come from the private sector. It is needed to maintain thecountry's growth momentum.

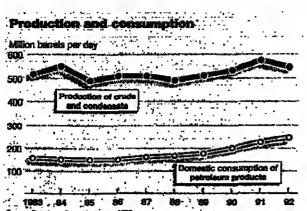

The economie team must tackle jealously guarded protectionist measures in some sectors, together with growing concern among some high-ranking officials that deregulation does little to alleviate the level of poverty.

The economy appeared to be teetering on the edge of a crisis at the beginning of this year. Foreign debt had reached the worrying \$90bn mark; inflation was climbing; growth in non-oil exports was slowing down: the oil price plummeted on international markets and foreign investment appeared to be levelling

At the same time, the gov-ernment reported a budget deficit of \$8bn for the fiscal

It had been hit hard by the worldwide slump in oil prices, which sparked off fears of a sharp one-off devaluation of the Indonesian rupiah, reminiscent of the 45 per cent devaluation that occurred in 1986. Oil prices have since climbed back from their yearlong lows, so that the government's \$16/barrel oil price assumption for its fiscal 1995

budget appears to be realistic. Meanwhile, foreign investment has also picked up. Analysts point to steady improvements in consumer demand and economic recovery in the developed countries as factors which could lift Indonesia's economic growth as high as 7 per cent this year, after expanding by 6.7 per cent last

Current account

The locating crises did, however, bring home Indonesia's sensitivity to external economic factors. The country's oil exports may only account for a third of total exports. compared with two thirds at the beginning of the 1980s, but oil revenue is still an important part of the budget. That will remain the case as long as non-oil exports rely to a large extent on wood products and textiles. Textile prices slumped by about 25 per cent last year, accounting for much of 1993's sudden slowdown in growth of non-oil exports.

What is needed to reduce the country's sensitivity to fluctuating oil prices is diversification of the non-oil export sector - a difficult feat to accomplish. Many of the country's most important economic res are politically well-connected and have assumed monopolistie roles, protected by high tariffs.

There is also growing friction at the unequal distribution of wealth in the country, an issue which economists say way of getting at deregulation.

The discrepancies between rich and poor are most striking in the cities, where lux-ury shopping malls, selling the latest western fashions at extravagant prices, tower over beggars and street vendors ekeing out a miserable existence. President Suharto is credited with reducing by twothirds the number of people hving in poverty since he took power in 1967. There is great

package on foreign invest-(7.148)ment, introduced on June 2, was welcomed by economists 2.561 and analysts who predict that it will significantly improve Indonesia's investment climate relative to competitors Debt repay for foreign funds such as Direct invest-China, India and Vietnam. The move was well-timed. Other capital

The minimum wage was raised by 46 per cent at the beginning of this year and it would be unwise to scare off labour-intensive industries while there are 2.5m people entering the work force overy

Easing restrictions on exports is proving more difficult, although economists estimate that high tariffs and protectionist measures could be costing the economy as much as 2 per cent in amual economie growth. These high rates of protection raise the costs of raw materials, and therefore production costs, for many local producers. Competing on international markets under these conditions is impossible.

The problem is deep-rooted some of the industries in question are controlled by President Suharto's family and friends. Economists point to sensitivity to distribution of of the economy delivers huge the petrochemical sector.

where last year the government introduced a 25 per cent import tariff on polypropylene resin accompanied by a 30-40 per cent import tariff on the plastic films with which resin

In the agricultural sector. import tariffs help maintain an artificially high price for sugar, which in turn hampers the development of an exportoriented food processing sector. The problem extends to the pulp and paper industry, where frustrated paper users formed an association to lobby the government

Despite dire warnings about the consequences of high lev-els of protectionism, the lobby - which includes publishers and printing companies - has had little success so far. Mr Fauzi Lubis, chairman of the Indonesian Printing Company Association, was quoted recently in the national press as saying: "Out of the country's 100 notebook manufac turers, only nine are still oper

Donors and government technocrats are equally concerned at the high cost of heavy industry projects being undertaken by Mr B J Habibie the minister of technology and research at a time when the government is struggling to balance its fiscal 1995 budget. Mr Habibie's eagerness to develop aircraft manufactur ing, car and nuclear power industries has caused a storm of controversy, reflecting the policy struggles taking place between technologists and technocrats in government.

Although analysts recognise Mr Habibie's efforts in fostering a highly-trained work force, they argue that it is impossible to leap-frog to development through technical wizardry.

If the growth of non-oil exports does not pick up and the current account deficit continues to grow hand in hand with foreign debt, the government's technocrats will certainly gain the upper hand. In the meantime they face the unenviable task of hattling with well-connected business monopolies and cash-hungry

Standard Chartered has long maintained an extensive banking network in Asia. We have also been recognised as the best, having been voted Best Bank in Asia in the 1993 Euromoney Awards.

Across the region, we continue to enbance the quality of our service in areas such as trade finance, treasury and corporate and investment banking. And we continue to develop new capabilities and create new connections - for example in China, where we now have more offices than any other foreign Best Bank in Asia bank, and, most recently, in Vietnam and Cambodia,

In this highly competitive marketplace, it is not enough merely to operate an international network. It is a question of international networking - actively co-ordinating offices and services to provide benefits in responsiveness, innovation and efficiency.

Having been voted Best Bank in Asia, Standard Chartered can

Standard & Chartered

INTERNATIONAL NETWORKING

looks ros

Suharto is untouchable

in history as a born-again democrat, but his recent calls for more open public debate, with his moves to reduce the

number of military men in government, indicate that there is change brewing.

The changes started when Mr Suharto, a former general, entered his sixth fiveyear term in office in March last year, having run in elections as the sole presi-dential candidate and been backed by both opposition parties and the ruling

First, he introduced a surprise cabinet reshuffle. Out went many of the older 1945 independence generation ministers; in came younger faces. In the process, members of the armed forces were reduced to eight from 11 in a 41-member cabinet, with only two of them on the

military's active service list. A few months later, President Subarto was calling for more open public debate. Politically sensitive subjects such as his own succession, human rights in East Timor, and the role of ethnic Chinese Indonesians in the country's business and economy are no longer completely taboo. "The degree of political openness is unre-cognisable from three or four years ago," says a Jakarta-based western diplomat.

To be sure, Mr Suharto and his family remain untonchable. Earlier this year, students who demonstrated outside parhament, demanding that Suharto account for his leadership, were each sentenced to six months imprisonment for defaming the president. Open discussion of Mr Suharto's family business monopolies, which extend from satellite communications to cement manufacturing, also remains off limits in the national press. What is interesting is not that the press has become bolder, but what has motivated Mr Suharto to call for more open public debate.

Observers point to his increasingly frequent hints that he may step down when his presidential term ends in 1998 - he will turn 77 that year - but they also mention the strain involved in keeping a lid held down on a society which is demanding more democracy to accompany its more open economic policies.

The national press is still constrained by a law which empowers the government to revoke publication and broadcasting licences when "the wrong kind of information" is dispersed - hut Jakarta roof tops are littered with large satellite dishes, soaking up information from international broadcasting networks.

"Mr Subarto realises that with globalisation it is inevitable that people know about what is happening instantly," says Mr Juwono Sudarsono, professor of International Relations at the University of Indonesia. "He realises that managed at home. They stand behind the drive for

openness is better than a complete clampdown. It is more effective in managing

Political analysts say that Mr Suharto's moves to foster open political debate show he is concerned about the legacy he will leave when he steps down. Over the last few years he has successfully dubbed himself as "the father of development" in Indonesia and his rule is credited with consistency in sustaining a healthy level of economic growth.

Politically, his track record is not queaky clean, particularly on the subject of human rights. An attempt to set the record straight on that front was carried out earlier this year when the Indonesian

President Subarto: sixth five-year term

government invited journalists from all over the world to attend a governmentguided tour of East Timor - part of a campaign to improve Indonesia's international reputation. The campaign is accompanied with a gradual reduction of military presence in government. The military, however, remains a force to be reckoned with.

Much of the public debate in the press is a reflection of the power struggles taking place in the ruling elite - technocrats and military men battling with technologists - and debate between the generations. Political analysts note that a new generation of ministers has entered Indonesian political life and that, unlike the 1945 independence generation, they are less concerned with cohesion and national unity. Many of them have been educated in the west and have tasted political freedoms which they do not have

more transparency in government. However, rather than argue things out in par-liament, some politicians have resorted to tossing subtle barbs at each other in the

One example is the controversy sur-rounding Mr JB Habibie, the minister of technology and research. Pressure on Mr Habibie's demands for a budget of \$1.1hn for the purchase and upgrade of the for-mer East Germany's fleet of warships was mounted by the minister of defence and security, who commented to journalists that the budget request was excesfinance forced Mr Habibie to slash his budget to \$432m.

Increased political openness has also had its negative manifestations. Some newspapers have used their freedom to vent racist feelings against ethnic Chinese indonesians.

Their grievances are based on the fact that the ethnic Chinese control about 75 per cent of the country's private capital although they only make up about 2 per cent of the population.

Observers say that attacks on ethnic Chinese Indonesians are also veiled criti-cisms of government officials who benefit from their association with large Chinesedominated conglomerates, and an indi-rect attack on President Suharto, who has often protected Chinese business interests in Indonesia.

It is certainly true that resentment of ethnic Chinese domination in industry and commerce has been an enduring characteristic of Indonesian politics since

But some observers say that in this sprawling archipelago, consisting of hun-dreds of different ethnic groupings who together count as the world's fourth largest population, things could easily slip into chaos. They point to the labour riots, laced with anti-Chinese sentiment, in the north Sumatran town of Medan earlier

In the meantime, Indonesians are watching the massacres in the former Yugoslavia with a mixture of horror and interest. Events there are a grim reminder of the consequences of ethno-

Analysts say, however, that a Balkan type break up is unlikely to occur in Indonesia because there is a strong sense among the ruling elite and military that stability is essential to keep up the momentum of economic growth. Thus, while the press may be bolder, there is still no freedom to assembly, no freedom of association and people's right to information is limited.

As Mr Sudarsono puts it; "The govern-ment wants to strike a nice balance between openness and stability."

Victor Mallet analyses the growing pains of industrial revolution

Disputes can turn violent

revolution has not been without growing pains. Strikes and demonstrations by factory workers have become increasingly frequent since the beginning of the decade, and labour disputes have occasionally turned violent.

The owners of export-oriented factories - for whom cheap labour is one of the main attractions of Indonesia - are understandably concerned about rising labour costs and the risk of unrest.

But employers are aware that Indonesian workers are still much cheaper than most of their counterparts elsewhere in south-east Asia; and they know that the lower-paid workers of Vietnam and China are starting to demand more money for factory work.

Indonesia's fledgling independent trade union movement has found support from a motley collection of allies, including liberal non-governmental organisations from Indonesia and abroad who have helped to inform workers of their rights, and the US administration, which has threatened to withdraw tariff privileges from Indonesian exports to the US if Jakarta fails to adhere to international labour standards.

Indonesian employers, most of them from the ethnic Chinese micority, have also unwittingly contributed to the increasing strength of the local labour movement; some have fuelled the resentment of workers by paying less than the official minimum wage (currently Rp3,800 a day in Jakarta) or hy treating employees with exceptional harshness; one factory was reported to have deducted Rp500 from workers' pay each time they went to the lava-

tory). Trade unionists already proclaim two martyrs whose names are known by industrial workers throughout the country: Marsinah, a woman labour activist and watch factory employee who was for-tured, sexually abused and murdered last year (three of the company's employees were recently found guilty of the crime but the men say they were forced to confess and the

Indonesia's industrial authorities have been accused of a cover-up); and Rusli, a rubber factory worker whose body was found in a river in Medan, north Sumatra, following a demonstration in March that was broken up by riot police.

In April, thousands of Medan workers went on strike, and demonstrations degenerated into rioting directed at the ethnic Chinese; one factory owner was dragged from his car and killed before the armed forces restored order. More recently

will be hundreds and then thousands - and stone-throwing - because of unemploy-

He acknowledges that the ministry sometimes has difficulties in enforcing the minimum wage rules and other labour legislation, pointing out that there are only 700 labour inspectors covering

Asked about allegations that employers rontinely hribe inspectors to ignore company malpractices, Mr Snwarto

and better conditions, but the government has refused to allow the union to register and occasionally arrests its offirials. Instead, the government insists that workers must be represented through the offi-cially sanctioned All Indonesia Workers Union, an organisation headed not by a worker

replies that it is impossible for the government to act against corruption without proof.

Employers, meanwhile, have threatened to lay off workers if wages continue to rise. They say Indonesian productivity is low and they normally employ more people than they need as part of an informal social contract involving low wages oo the one hand and job security on the other. With 2.5m school leavers entering the workforce each year, and an estimated 30-40m Indonesians either

Government officials justify an officially-controlled union by the need to maintain law and order

but by a textile magnate who is also a member of the ruling Golkar party.

Government officials argue that Indonesian workers are not sufficiently educated to establish their own union and that an officially-controlled union is justified by the need to maintain law and order. Mr Suwarto, director general for industrial relations and labour standards at the ministry of manpower, says: "How can they organise for themselves without being guided by the

He adds: "Here in Indonesia, if there are 50 people carrying

unemployed or nuderemployed, factory owners say they do not see much economic justification for

increased wages.
The independent trade union (known by its Indonesian acronym as the SBSI, not to be confused with the governmentbacked SPSD argues that wages and conditions should be improved both to provide workers with a living wage and to ensure that labourers are treated in accordance with the international agreements to which the Indonesian government itself has subscribed. Trade unionists - and forrefer to the fact that whereas wages account for only about 7 per cent or 8 per cent of total costs for a typical company in Indonesia, bribes for government officials can account for between 10 and 30 per cent; the obvious way of picasing employees and employers alike is to abolish corruption and use the money saved to

raise wages.
The SBSI, which now claims to have more than 250,000 members, inevitably finds itself straying into the political arena, confronting the gov-ernment on such issues as retically guaranteed in the constitution) and the role of dominant in politics and frequently intervene to factory

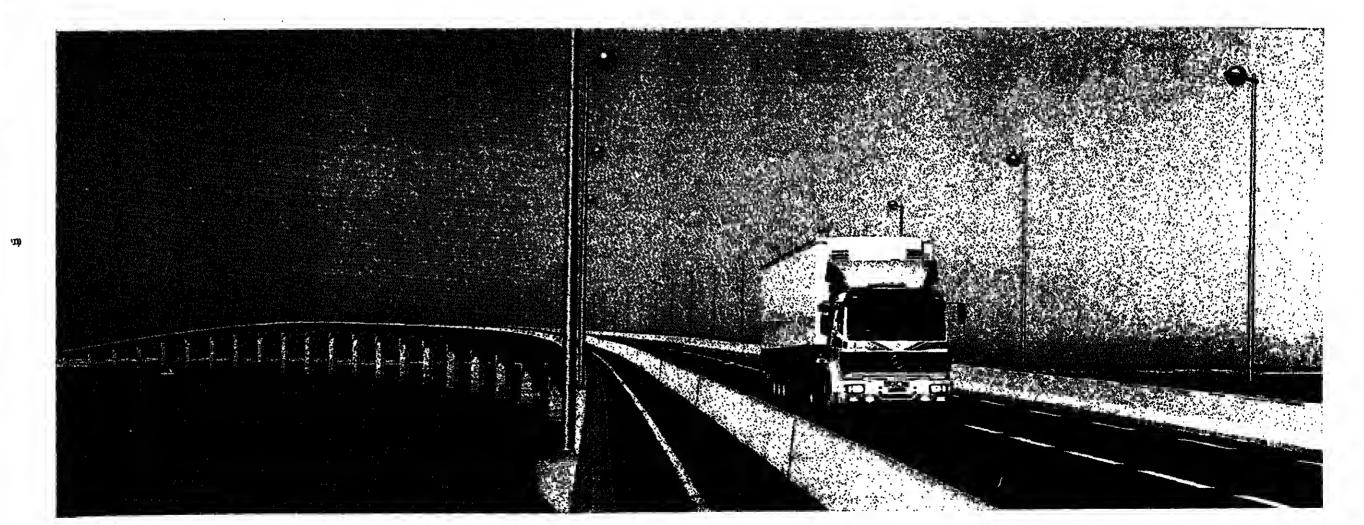

strikes).
"My struggle is to build a strong civil society through a strong trade union," says Mr Mnchtar Pakpahan, SBSI leader. "Only a strong trade union can balance the domination of the military."

Should the government attempt to close down the SBSI, he says, "I will organise a rally to toppie the government if the government acts against the law and against the constitution." Some military leaders have

likened the SBSI to a subversive communist organisation. and the Indonesian government may be tempted to emulate its counterparts in Malaysia and Singapore by suppressing the independent trade union movement. Even if that happens, Indonesia is unlikely to be able to resist domestie and international pressure for higher wages and better working conditions.

This was one of topics raised by the International Labour Organisation's Mr Herihert Maler, who called for a new Indonesian labour code based on ILO principles during a recent visit to Jakarta. As he said in a speech to Indonesian officials: "The eveots of the last few years, months or even weeks in the country have shown quite clearly that the evolution of its industrial relations has not kept pace with its rapidly developing economy and industry."

Profile: Mohamad Hasan

Private king

business community, the up - such as Mr Mohamad Hasan. Universally known as Bob. Mr Hasan heads one of the small number of enormous personal business which control much of the country's economic activity.

By his own count, Mr Hasan owns more than 100 companies with interests ranging from forestry and construction to insurance and banking. But although his wiry figure and impish looks are a familiar public sight, his personal affairs have remained very private often wrapped up in the yayasans, or quasi-charitable foundations which conceal much of Indonesia's wealth.

Mr Hasan has never floated shares on the public exchanges. In a recent interview he said his group made no use of debt either.

But the influence of the Hasan empire extends well beyond mere business. Mr Hasan is close to President Suharto, whom he got to was a regional military commander. Today the two meet regularly to play golf. The mere association of Mr Hasan with some initiative is enough to get it off the

Like most of Indonesia's business tycoons, Mr Hasan is of Chinese ethnic origin a somewhat touchy matter in a country which resents Chinese commercial domination. But if this has been a disadvantage, it is greatly outweighed by his links with Suharto, which are closer than any cabinet member's. To reinforce these ties, Mr Hasan changed his name (it was originally The Kian Sang), and converted to Islam, joining Suharto on the haj to Mecca. He is also said to make a point of not

employing Chinese staff. The heart of the Hasan empire lies in forestry and wood products. His personal power base is reinforced by his chairmanship of Apkindo,

account for over three quarters of the plywood supplied

to the world market. This forestry connection has made him a controversial figure, not merely because of Apkindo's powerful grip on the wood products business but also because of interna tional concern about the destruction of the rain for-

Mr Hasan denies that Apkindo sets prices: "That would get us in a lot of trouble." He has also gone on the offensive to defend Indonesia's forestry practices, visiting Strasbourg earlier this year to put his case to Euro-

"We want the world to know that we care about our forests," he says, adding that Indonesia has a detailed plan for its forest management, and has embarked on initiatives to enforce the law on concession holders, such as aerial surveillance and an eco-labelling scheme. Asked about the extent of illegal logging, he says; "There's a small quantity."

Mr Hasan believes that natural resources must underpin Indonesia's economic growth. "Everyone is going into electronics, cars and steel. But you need a table to put your computer on, a case for the diskette. We can make those things. They're complemen

Now in his 60s. Mr Hasan

has begun to pull back from

direct day to day involvement with his businesses. His real interests, he says, are the string of sporting and community causes with which he is involved. He heads Indonesta's athletics, gymnastics, golf and chess associations. He is also a member of the **Business Council for Sustain**able Development - the Swiss-based group of environmentally concerned businessmen - and is in the process of setting up an Indonesian branch of the Duke of Edinburgh's Award. "These are

my businesses. My industries

are my hobbies," he says.

■ he Jakarta stock exchange has provided investors with an object lesson in the thrills - and spills - of emerging markets. Last year the exchange was

a star performer: the composite index doubled, triggering a flood of company flotations and rights issues. But after hitting a three-year high in the first week of January, it went into a nosedive which wiped 25 per cent off share values, in recent weeks prices have begun to creep back up again, but the experience has caused analysts to look more warily at the market - and its smaller sister in Surabaya.

The ostensible cause of the sell-off was the Federal Reserve Board's decision to raise US interest rates in February. But with a domestic crisis bubbling up in the state banking sector, and ethnic riots in Medan, there were other reasons for investors to

Analysts say that it is important to understand that unlike other south east Asian markets, Jakarta is not dominated by local Chinese traders. This means that there is less of the speculative investment seen on other regional exchanges. On the other hand, 70 per cent of

David Lascelles on the banks

Stern specifics

"I specifically urge all parties related to banking activities to stick to ethical and efficient practice in managing the ndustry."

These stern words came last month from no less a person than President Suharto - a clear indication of the serious straits in which Indonesia's banking industry finds itself.

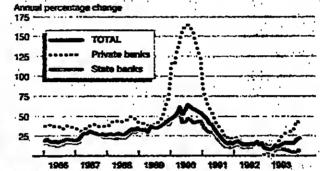

Suharto made his utterance just as the Indonesian press was regaling its readers with details of the Bapindo trial in which Mr Eddy Tansil, a local businessman, is accused of defrauding Bapindo, the state development bank, of the equivalent of over \$430m. The case has sent shock waves through the Indonesian political and business establishment with its suggestion of corruption in high places. But it has also forced the Indonesian anthorities to confront the country's notoriously manipu-

According to an announce ment by Mr Mar'ie Muham

mad, the finance minister, last February, 21 per cent of loans worth \$7bn in the seven state banks are either bad or in default. He told a parliamentary hearing that much of this was the result of collusion between the banks and their customers, and promised a massive clean-up. The ministry of finance has now set up a supervisory team with Bank Indonesia, the central bank, to pick through the state banks' loan books.

Mr Sudradiad Dilwandono. who became governor of Bank Indonesia a year ago, says: "Although there's a big public uproar over Bapindo, we had already begun to address the issue of bad loans." He says that a wide range of measures is being adopted to strengthen

Loan growth

All this attention to banking fed by the new openness Suharto has sanctioned might be thought highly embarrassing, coming as it does on the heels of problems in the private banking sector as well. But many bankers welcome it as evidence of povernment determination to get banking back to health. "It's long overdne," says a foreign banker in Jakarta.

The private sector's problems date back to the illjudged deregulation of the releasing banks from tight. The central bank tightened problem is so large, it has had central bank's agenda

controls on reserves and branch anmbers. The banks used their new-found freedom to go on a lending spree which came to a halt a couple of years later, when the central bank tightened monetary policy to rein in credit growth. Since then, many private secfor banks have been forced to merge, or turn to their shareholders for more capital. Last year Bank Summa, one of the country's largest, was wound

up on government orders. But the road back to bealth

capital requirements to meet the new Basie regulations in 1991, but had to loosen them again last year to mobilise more lending, although the level of bad debts was still high. "By the end of this year, I can say that we shall have a very clean portfolio," says Mr Glenn Yusuf, a director of Bank Niaga, a leading private sector bank.

forthcoming privatisation.

But the shake-out has still some way to go, in many peo-ple's view. The number of banks lu Indonesia, 243, is considered to be far too large. At the same time, the number of properly qualified personnel is too small; this means that banks are badly managed. Another underlying problem is that many of Indonesia's largest banks form part of wider Industrial conglomerates where they are treated as in-house" banks. Much of the banking sector's difficulties stem from the incestoous relationships that result.

The central bank is trying to cut down the amount of linked lending by enforcing the internationally accepted ceiling of 20 per cent of assets to a single

to give banks a breathing space by allowing them to insure the credit risk on any over-limit loans until 1997.

The problems of the state sector have also had repercussions on private sector banks. Many of Indonesia's largest companies relied heavily on state banks for their funding. But now that the state sector is more tightly policed, these companies have been forced to turn to private banks instead - putting pressure on the private money markets and helping to push up interest rates. Some companies have also begun to turn to foreign banks operating in Indonesia. But there are limits to the growth of this market because foreign banks are required to restrict most of their lending to export-related business. There are also limits on their shillty to raise funds externally.

The sharp growth in bad loans has exposed another bugbeer for bunkers: the difficulty of recovering debts through the courts because of inefficiency and corruption. reform of the law affecting the rights of creditors and deposi-

The transformation

Nusa Dua Beach Hotel

has begun.....

The Nusa Dua Beach Hotel Bali has recently embarked on a US\$ 22 million refurbishment program to restore the hotel to its original authentic Balinese palace-style design. The transformation of its 380 guestrooms and suites will emphasise ethnic decor, larger bathroom facilities and all the amenities you would expect from a deluxe hotel. Incorporating the latest technology, all rooms will have individually controlled air-conditioning, private bath and shower, hairdryer, radio, IDD telephones, safe box, satellite television, in-house movies and a private balcony. Additional facilities will include an environmentally-friendly Health Spa complete with a Lap Pool and Spa Cafe, a new lagoon-style swimming pool and a Business Centre. The new Palace Wing will ensure exclusivity and regal service beyond all expectations, with classical interior decorations, private gardens for the Lanai rooms and an exclusive butler service. With a highly successful and legendary history, the Nusa Dua Beach Hotel has preserved and recreated the Bali of days gone by, securing an era for prosperity. The future looks even brighter as the management and staff pursue a course of improvement and by March 1995, the reality will be even more glorious than the dream.

BUILD INDONESIA

Indonesia's progress towards the status of a newly industrialized country is filled with new power projects, roads, harbours and airports, new towns and cities.

At the foundation of these infrastructure developments are cement and concrete.

Cement Cibinong, Indonesia's second largest cement producer and fourth largest in South East Asia is responding to the challenge through a program of acquisition and a major expansion project in central Java.

The Cement Cibinong group has four million tons of cement capacity, a rapidly expanding ready mix concrete operation and an efficient distribution network that utilizes road, rail and sea links

And Java is home to over 100 million people consuming two thirds of national cement

Cement Cibinong is maximizing the opportunity to support infrastructure growth. Opportunity that makes us more than a cement company.

It makes us a solid investment.

Controversy persists over conservation issues

Kalimantan, as the Indonesian part of the island of Bomeo is known, is a huge wilderness, thinly populated and rich in

DONS rosig.

The terrain extends from high mountain peaks, through

lush rain forests to the mangrove swamps and lazy rivers of the coast. Despite difficult working conditions - torrential rain and few roada - the island has Important industrial projects, particularly in East

Kalimantan where some of the richest energy and forestry resources lie. But development is controversial: It creates social and economic strains and stirs up environmental

Sensitive to international criticism, the Indonesian dovernment has been arguing that development and conservation can go hand in hand in developing tha area's potential.

Sangatta coal is of high quality

"That's the Sangatta seam we're chasing" says John Arkeveld, pointing at a thick black line in the hillside. We were standing on a muddy hilltop overlooking a huge man-made hole. All around us, dump trucks growled their way about, heaving out huge loads of glistening black coal.

Sangatta is one of the largest open-cast coal mines in the world. Set 13km inland

from Kalimantan's east coast, the three-year-old operation is already producing some 10m tonnes a year, and is aiming to go up to 12m. Lest month the mine set a world record by loading just under 200,000t of coal on to a single cargo ship.

The existence of coal in East Kaliman-

tan has been known for some time. But Sangatta was only developed recently as a result of licensing deregulation by the Indonesian government. The Sangatta licence was won by Kaltim Prima Coal (KPC), a 50:50 joint venture between British Petroleum and CRA, the Australian mining company part owned by RTZ.

The mine is highly attractive, for a number of reasons. The coal is of exceptionally high quality: it is low in sulphur, ash and moisture; the seams are thick (up to 14m in places); and the reserves are estimated at 590m tonnes, enough for nearly 50 years. Production is already 50 per cent

Furthermore, the mine is linked by

conveyor belt to a deep sea berth which means that the output can be shipped out cheaply. Most of the production is exported, mainly to power generation utili-

ties in Japan, Taiwan and Hawaii. But against that, the seams have turned out to be more complicated than the geologists expected, so mining costs have been higher than first thought. Also, steaming coal prices have fallen by a quarter since the mine got into production in 1991. The mine cost \$570m to develop, and

The BP/CRA contract with the government does not specify who is to pay the final clean-up costs once mining is finished

KPC pays the Indonesian state coal com-pany PT Batubara a 13.5 per cent royalty on all the coal it takes out. Mr John Slater, the managing director, declines to discuss the operation's finances, but he says that production costs are at the lower end of the world scale, mainly because the coal can be shipped out so easily.

He is also optimistic on prices: "We are at the bottom of the cycle, and we'll see prices come back a little," he says, noting that spot prices could rise in Europe. (CRA reported a profit of \$A44m on its half share in the mine last year, double the previous year's profit).

Another difficulty is that Sangatta lies next door to the Kutai national park, one of the few areas of virgin forest left in East Kalimantan, which makes it an easy target for environmentalists. KPC is helping to fund conservation projects to protect the area, and has a programme to reforest the open pit itself. What is not specified in the contract is who pays for the final clean-up costs once mining is finished.

The mine employs 2300 people and provides jobs for another 2000 contractors; it is the main source of employment for miles around. Employees get access to high class shops, education and health services. But this also sharpens the divide between the haves and the have-nots, the latter clustering hopefully round the mine in little villages.

How long BP and CRA will remain in control at Sangatta remains to be seen. Under the terms of their agreement with the government, they are required to offer up to 51 per cent of the husiness for sale to Indonesian interests between 1996 and 2001. Ironically, BP has been selling off most of its coal operations elsewhere in the world as part of its big rationalisation drive. But it held on to Sangatta because of its exceptional prospects.

'We are deep in the rain forest'

All around us, trees draped in bright green foliage rear more than 100 feet into the air. At our feet, the orange clay has been churned up by bulldozers. Close by we hear the roar of a chain saw followed by the slow crash of a falling tree.

We are deep in the Kalimantan rain forest, in one of the giant logging concessions which supply the bulk of Indonesia's timber. This one, covering a buge area of 470,000 hectares, belongs to the International Timber Corporation of Indonesia (ITCI). We are here because ITCI is keen to rebut accusations that it is ravaging the forests.

Suwardi Suwasa, who is in charge of forest rehabilitation, explains that the concession has been divided up into 35 blocks, and only one may be logged each year. Even then, an inventory has to be prepared and accounted for to the authorities, and only trees measuring more than 50cm across may be felled. This form of selective logging, which removes up to 10 trees per hectare a year, is bealthy for the forest, Suwasa explains, because it lets in light and encourages regeneration.

He shows us a spot logged five years earlier. The "pioneer" species which recovar first are already 20 feet high. creating an environment for the slower growing, longer lasting species to return.

After felling, logs are loaded up to 10 at a time on to buge haulage trucks and sentoff to the saw mills where they are transformed into plywood, boxes, furniture and even conservatories for English suburbia. The ITCI operation looks impressive to visitors. But environmentalists say it is not typical of logging operations on the land, where much felling is done ille gally, with the connivance of the authorities. It is certainly easy to see the results of earlier rapacious logging along the coast where whole tracts of land have been flattened, and now lie neglected,

An eco-labelling system would help purchasers of Indonesian wood to know that the timber came from properly managed forests

Another worry is that Indonesia may increasingly turn to fast-growing eucalyptus to feed its ambitious plans for a domestic paper industry. But the forestry industry is beginning to hit back at these accusations. Mr Djamaludin Surjohadikusumo, minister of forestry and a former forester, acknowledges that there are "weaknesses in the chain of control," but be emphasises that steps are being taken to beef up enforcement - he points to the growing number of concessions which are cancelled each year because the holders have failed to heed the rules.

is encouraging the industry to set up an eco-labelling system so that purchasers of Indonesian wood can know that the timber came from properly managed forests. The scheme, which would be independent of government, has the support of non-governmental organisations.

"The industry needs a sustainable supply," he says. "Without it the industry would commit suicide." He estimates that illegal logging amounts to between 4m and 6m cubic meters a year, compared to official production of about 30m cu m - "but

no one really knows".
The forestry indostry on Kalimantan also supports a local independent research institute, Wanariset, which is funded by Tropenbos, the Dutch foundation, and multilateral lending agencies such as the World Bank. Mr Willie Smits, the Dutchman who runs it, says that the basic intentions of the Indonesian forestry industry are "good", bot implementation of the

rules is a problem.

His institute is developing ways of managing the forests more economically through botanical research and computer ised management. He envisages a time when anyone buying a product made of Indonesian timber could identify the precise location of the tree which supplied it, and obtain an aerial photograph showing whether the area had been regenerated.

Natural gas on the equator

equator. The air is hot and steamy, and a warm breeze blows in from the sea. But ice several inches thick coats the huge ors where natural gas is being liquefied at temperatures below -150 degrees centigrade.

Each year the giant Bontang plant produces 15m tonnes of liquefied natural gas (LNG) from the surrounding gas fields and loads it on to special container vessels for shipment to Japan, South Korea and Taiwan. Developed nearly 20 years ago at a cost of some \$3.5bn, it is now the largest of its kind in the world - a big contributor to Indonesia's overseas earn-

Over that period, a complete town has sprung up along what was previously an villages. Still hard to reach by land because of the poor roads and muddy rivers, Bontang is linked to the outside world mainly by air and sea. Although the plant itself only employs 1700 people, it helps to support a community now estimated at close on 100,000 people. But out at sea, within sight of the plant, a small village still perches on stilts: the home of the orang lau, or sea people who live off-

In the past, Boutang has been overshadowed by Indonesia's other LNG plant at Aceh in northern Sumatra which was

developed more rapidly. But Bontang is about to take the lead. As Aceh'a output levels off towards the end of this decade, Bontang's will continue to grow. Last November it opened its sixth train, or production line, and it has plans to add a seventh by 1997 and an eighth by the end of the decade, by which time capacity will be about 20m tonnes.

Mr Subroto, the plant's manufacturing manager, says that the only constraint on the scope for growth is the ability of the

The gas market is there - the fuel-hungry electricity utilities of the Pacific rim are expected to double their consumption by 2010

gas field contractors to supply the gas fast enough. The market for the LNG is there: the fuel-hungry electricity utilities of the Pacific rim are expected to double their consumption by 2010, and there is space at the plant for the additional trains.

Bontang is owned by Pertamina, the state oil and gas company. But it is managed by PT Badak, a company jointly owned by Pertamina, a consortium representing the Japanese customers who financed construction of the plant, and two of the companies which supply the gas: Total of France, and Vico (a joint Union Texas Petroleum).

The gas comes from fields to the south of the plant, linked by a network of pipes running through the forests and man-grove swamps, culminating at the Badak processing plant just below the equator where the gas is made to the right blend and pressure for transmission up to Bontang. The fields also supply the Kaltim fertiliser plant just to the north of Bon-tang - again one of the largest of its kind in the world. Badak marks the spot where the first oil and gas was found in the area by Roy Huffington of Texas (Huffco) in 1971. Huffco's properties later becama part of Vico, with Lesmo acquiring its interest in 1991 when it bought Ultramar.

Since the Huffco finds, Total has been successful in discovering large new offshore fields in the mouth of the Mabakam River, despite the difficult operating conditions. The French company will shortly become the main supplier to Bontang, contributing about three quarters of the gas needed to fulfil new contracts currently under negotiation. "Our gas reserves will continue to improve," predicts Mr Bernard Vitry, Total's representative in Jakarta.

The total capacity of the fields supply-ing Bontang is about 33 trillion cubic feet, of which Total has about half.

As the oil surplus dwindles, David Lascelles considers energy needs

Big decisions to be made

As Indonesia's oil surplus dwindles, the country faces increasingly large questions about its energy future. în some areas, Jakarta's pol-

icy is clear, the place vacated by oil is to be filled by other energy sources, which Indon-esia fortunately has in abundance, notably liquid natural gas and coal. But in others, important decisions have still to be clarified: how are the ambitious targets for power generation to be achieved? And how is burgeoning demand for refined products to be met?

Indonesia currently produces some 1.5m barrels of oil a day, of which it exports about half. But although it has managed to maintain production at this level for some years, there is little prospect of it heing increased. No major new finds await development, and all the most promising and accessible areas hava been well explored. Meanwhile, domestic fuel consumption is increasing at the rate of about 5 per cent a year, raising the possibility that some time early next century Indonesia will cease to have any oil to spare.
Of the alternative energy

sources, natural gas seems to have the brightest prospects. Already a world leader in the export of liquefied natural gas. ndonesia hopes to build on his position, but the pattern of roduction will change. Until now, the Aceh LNG

roject in northern Sumatra us been the spaarbead. ulthough Mobil has a new offhore field with 1.5tr cubic feet gas still to develop there, ceh's output will hegin to wel off through the rest of its decade. Meanwhile, Total as made substantial gas disoveries in East Kalimantan hich have opened the way for aportant expansion of the 20year-old Bontang LNG plant there. A fresh round of contracts is being negotiated with utility customers in Japan, on the basis of which two more production lines will be added to Bontang bringing its capacity to 20m tonnes a year. (see separate article on this page). A question mark remains over the large gas field discovered by Exxon at Natuna in the northern offshore region of

the country. The new energy minister, Ida Bagus Sudjana, halted negotiations last year, blaming the poor economics of the project. The feeling among the Jakarta oil and gas community is that its remoteness and the high carbon dioxide con-

The question is the extent to which Indonesia will deploy these resources of gas and coal for its own domestic use.

The government has an ambitious electricity programme for which it is trying to obtain private sector investment. The objective is not just capacity expansion, but a reduction of the current heavy reliance on oil for power generation. The 10 year plan aims to create some 15,000MW of new capacity, most of it coal-fired. but some also using gas.

Dozens of foreign companies are chasing the business, and a number of projects have been agreed involving concerns such as British Gas and Enron,

The government has an ambitious electricity programme for which it is trying to obtain private sector investment

tent of the gas deposit have weakened its chances. The outlook for coal is also good. Following the liberalisa-tion of licensing in the 1980s, several foreign companies have launched projects, mainly in Kalimantan, including CRA, BP and BHP. This has led to a dramatic increase in production and exports which has propelled Indonesia into the position of the world's fourth largest exporter of steam coal. Production last year reached 28.6m tonnes, with axports

tation is that production this year will reach 33mt, with exports rising to 24mt. Most of this coal is produced from efficient open cast mines where reserves are large, warranting development plans extending several decades. In Kalimantan the coal quality is also good, with low sulphur, asb and moisture content.

amounting to 19mt. The expec-

The gas in Kalimantan and Aceh is for export," says Mr Suyimo Patmosukismo, director general of the oil and gas rate. "Other concer tions will be developed for domestic use, for power gener-

passed in January when PLN, tha state power company, struck its first electricity purchase contract with a private sector generator, showing that agreement could be reached on prices. The plant, the coal-fired Paiton plant in East Java, is a joint venture between Mission Energy, GE, Mitsui and PT Batu Hitam Perkasa, an Indo-

mainly drawing gas from small offshore fields in the Java Sea. But the big decisions have still to be made. "Everyone's trying to sniff out what's happening," says a western oil executive.

An important milestone was

remains unresolved.

A permanent debating point ing it with them."

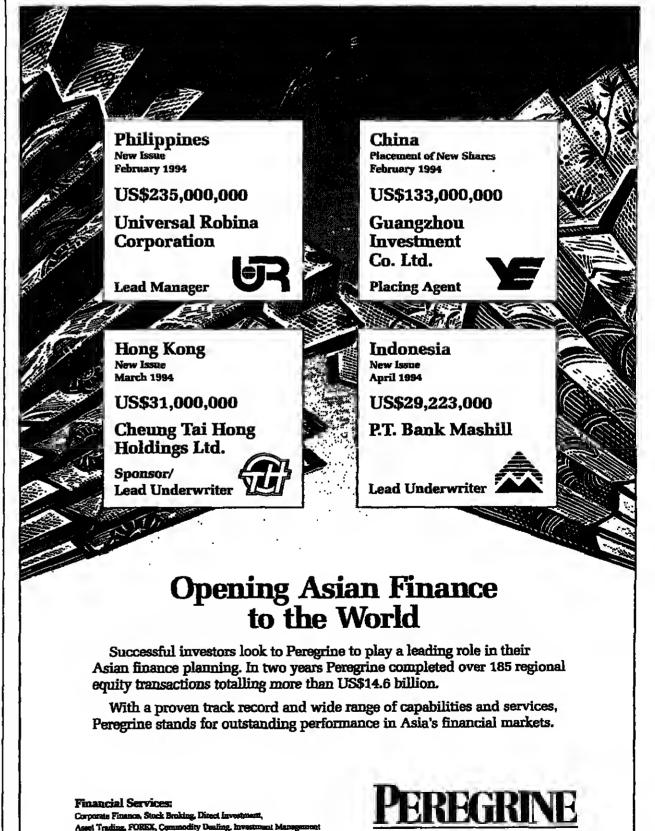

in the energy industry is the quality of investment incentives for foreign companies. This has become more critical now that Indonesia needs to stimulate a greater exploration and production programme.

Last year, the government improved the profit share for companies operating in the less mature areas of eastern Indonesia and the offshore provinces: they will get 35 per cent rather than 20 per cent. But other changes reduced some of this benefit, leaving oil industry executives less than enthusiastic. A big sticking point is the government's refusal to consolidate taxation so that expenses incurred in one contract can be used to

offset profits in another. Mr Suylino says: "There is a dialogue with the companies and we try to consider their concerns. But in the oil and gas area we do not need any more action to open our door

Another potential difficulty is abandonment costs. Early contracts between Pertamina. the state oil company, and foreign contractors, omitted to specify who was responsible for removing equipment when production was finished. Foreign oil companies have taken the line that since Pertamina owns all oil industry assets, it should logically pay. Pertamina is now specifying in new contracts that foreign companies are responsible for these costs, but the question of who pays in old contracts - where millions of dollars are at stake

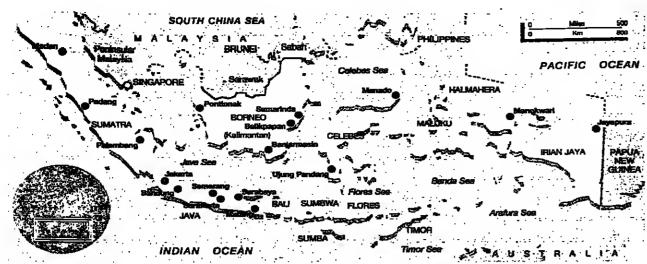

"According to our law and the law of the sea which Indonesia has agreed to, we have to remove it," says Mr Suyitno. "But the cost must be borne by

Manuela Saragosa reviews foreign policy in the context of the region

Diplomatic row highlights sensitivity to criticism

A diplomatic row between the Philippines and Indonesia earlier this month highlighted once again Indonesia's seositivity to criticism from ahroad about human rights abuses in East Timor ~ hut also hinted at the fragility of political unity within the Association of Southeast Asian Nations (Asean).

Relations between Indonesia and the Philippines hecame decidedly uncomfortable in May. The question of East Timor, always a thorn in the flesh of Indonesia's foreign policy, was at the centre of a diplomatic spat between the two countries which are usually content to march under Asean's banner of solidarity.

It started when the University of the Philippines, based in Manila, agreed to host the Asia Pacific Conference on East Timor. In the argument which followed, an angry Mr Ali Alatas, the Indonesian minister for foreign affairs, threatened to break off diplomatic relations with the Philippines if the Filipino government did not ban the conference.

the conference.

A diplomatic envoy sent expressly from the Philippines did his best to explain that his government had no constitutional power to prevent the

conference from taking place

because it was organised by non-governmental organisations. Asked if the incident could damage relations between the two countries, Mr Alatas responded: "It could be a

The conference went ahead anyway, but Indonesia's lamentations were not completely without effect. The

The Philippines and Indonesia accused each other of interfering

Filipino government tried to bar foreign academics and human rights campaigners attending the conference from entering the country; in a number of cases it was successful.

"The whole affair was very embarrassing," a Jakarta-based diplomat says, it was embarrassing for the Philippines, which felt obliged to succumb to Indonesian pressure, and it was embarrassing for Indonesia because of the criticism which foliowed.

The Philippines and Indonesia accused one another of interfering in each other's domestic affairs. (The pillars of Asean rest on promises by its member states - Thailand, lndonesia, Malaysia, Singapore, Brunei and the Philippines - not to meddle in each others' politics.)

The problem, as one Asean official sees it, is the "differing levels of tolerance for political openness within Asean member states." In Indonesia people do not have the right to assemble freely – government approval is needed for gatherings attended by five or more people – but the Philippines is a struggling democracy where freedom of assembly is guaranteed by the country's constitution.

The manner in which Indonesia handled the incident was in direct contrast to its usual policy of keeping a low - and in contrast, too, to its highly applauded efforts in attempting to negotiate a settlement in the Cambodia conflict. As the row over the conference unfolded, Indonesia was accused of bullying a friendly neighbour. More to the point, the incident also demonstrated the lengths to which Indonesia will go to defend its stance on policy towards the former Portuguese

The irony is that the noisy protests made by the

Indonesian government gave the conference worldwide publicity and hrought East Timor back into the beadlines. Besides, it clashed with Indonesia's earlier policy of guaranteeing more openness about the East Timor issue, in what it boped would "promote understanding of the prohlems

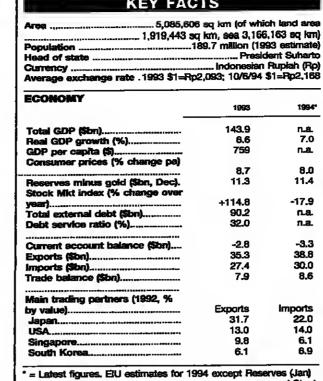

in the region."

Earlier this year, foreign journalists were invited on a government-sponsored tour of the region. The aim was to demonstrate how much money had heen spent hy the Indonesian government in improving East Timor's infrastructure and building schools and hospitals.

As Mr Irawan Abidin.

director of information at the ministry for foreign affairs, put It: "Indonesia's sincere intent to give substance to the freedom won by the people of East Timor is reflected in its continuous efforts to accelerate the social, economic and political development of East Timor."

However, the film footage of the Dili massacre of November 1991, which showed the military shooting into a crowd of unarmed independence demonstrators, is still fresh in many people's minds. What the Indonesian government does

not appear to have anticipated, in its objections to the Manila conference, was the had publicity it would earn. Indonesian newspapers bewailed the fact that attempts to stop the conference helped

"It is not unusual to see something like this happening in Asean"

develop it into a media hlitz which portrayed Indonesia as the "had guy" member of

One speaker invited to attend the conference, Mrs Danielle Mitterrand, the wife of French President François Mitterrand, accused the Indonesian government of exercising "tyrannical pressure" on her not to attend.

Critics say that Indonesia's outrage at the holding of the conference only lent credence to human rights activists' accusations that the Indonesian government is tyrannical and authoritarian.

That is exactly the kind of reputation the government is trying to shed now that it is hecoming more tolerant of public debate. There is growing irritation in government that the only time Indonesia makes the headlines abroad is on matters relating to East Timor. Meanwhile, Asean officials are anxious to point out that this kind of dispute between

Meanwhile, Asean officials are anxions to point out that this kind of dispute between member states is not unusual. In the past, for example, there have been territorial disputes between Thailand and Malaysia which have eventually been resolved. "It is not unusual to see something

rraced rice-fields in the mountainous Indonesian island of Bal

like this happening in Asean," says an official. "But it is certainly not the end of

Officials say that Asean, which was set up in 1967 to provide a forum for economic co-operation, could not afford to break up over an argument between two member states, even if their policies differ aignificantly. In an increasingly competitive economic environment, "Asean realises that it has to stick

realises that it has to strick together," the official says.

The diplomatic row between Indonesia and the Philippines may have been intense, but it was vary short-lived. By mid-June, two weeks after the end of the East Timor conference, President Suharto assured a Filipino senator that he supported "traditional relations of friendship" and

senior officials in Manila were quoted as saying that relations between the two countries were back to normal.

But it remains to be seen how Indonesia will react if further conferences on East Timor take place in the south east Asian region. Mr Murdiono, the Indonesian state secretary, said that a representative of the Filipino government promised there would be no more conferences on the subject, but senators in the Philippines claim to be unaware of this promise.

Indonesia's handling of the East Timor conference may have been a veiled warning to neighbouring countries to steer clear of sensitive issues in the country. In the meantime, critics say that the affair has done little to improve the government's reputation.

Manuela Saragosa interviews the minister for trade and industry

Committed deregulator

Mr Hartarto was promoted to be Indonesia's co-ordinating minister for trade and industry last year after serving as minister of industry for two consecutive

He explains the government's policy on deregulation of the economy.

Question: The government is working on a trade deregulation package to complement its hosting of the Asia Pacific Economic Co-operation (Apec) conference later this year. Could you give any hints as to what might be expected in this pack-

Answer: The deregulation package is actually linked with a trend in the world for globalisation.

It is a basic need to further deregulate the economy. As you know, we are always implementing prudent macroeconomic management. That is very important, and then to enable our economic growth we emphasise investment and

On investment we have recently issued new regulations which will hopefully boost foreign investment and this is also linked to the restructuring of the economies of certain countries in this region such as Japan, Korea, Hong Kong, Taiwan, Singapore, Australia. We have to compete globally.

The latest deregulation package is not enough. We must also deregulate export and import procedures and then deregulate tariffs. This will also be announced very soon

"Certain areas of agriculture are still protected"

hecause we have to comply with Asean's (Association of South East Asian Nations) free trade requirements and also Catt (General Agreement on Tariffs and Trade) requirements. Unilaterally, we will reduce our tariffs, probably in the near future. The final tariffs will be between 0 and 5 per cent. And then we also will remove, hopefully, all the nontariff barriers.

Q: How much of a threat are the

economies of Vietnam, Chima and India to Indonesia?

A: We should not think about threats. What we have to do is deregulate the economy and I do believe that investors take note of the experience of Indonesia in the past 25 years during which we have heen able to maintain 6.6 per cent growth on average every year. So this is actually a trust which we can use to attract more investment.

Q: The petrochemical, nircraft

A superstore in a suburb of Jakartz: "We must also deregulate export and import procedures and then deregulate tariffs"

Picture Meth Darks.

manufacturing and agricultural sectors remain highly regulated. Do you foresee any changes in these sectors?

A: Certain areas of agriculture are still protected but we have to follow the rules. They cover six commodities, such as rice, soyaheans, cloves, white onions. But we have to change. Q: Many sectors of the economy nre dominated by well-connected businessmen. Do you think that deregulating them could evolve into n big political

A: No. Wa have to deregulate every sector, reducing tariffs. Q: The government recently nnnounced some drastic changes to restrictions on foreign investment in Indonesia, but opening up the media sector to foreigners was not well-received. Did you expect such n reacting?

A: Well, from the beginning the media sector was not opened. Explanation was rather late and that created the reaction. When the team explained about tha latest deregulation package they did not explain fully that media was not included.

Q: Foreign investors here complain that while the government is committed to deregulation, they often have to fight with a bureaucracy that does not have the same intentions as ministers. How will you tackle this problem? A: The next deregulation pack-

age will follow this up. Hopefully it will be issued very soon. They are now working on that. It will deal with new We must also deregulate export
guiste tariffs" Proper March Design
investment, foreign invest-

Q: When can that package be expected?
A: Within this month or next.
Q: There appears to be n real urgency about it.
A: Yes, it is urgent. It is for our

ment, domestic investment,

export and import procedures.

own sake. Q: What sparked off this urgency? A: The fact that we had prob-

A: The fact that we had problems with our domestic banking system. The requirements for capital investment for the next six years are so huge and we have to maintain growth of 6.5 per cent. So we have to do this.

Q: How important do you think high technology industries such as aircraft manufacturing and

ship building are to hidonesia's A: This is of strategic value and so we maintain we have to develop these sectors also. But as far as ship-building is con-cerned, it is not only relying on the state but also on the private sector. We are not only exporting textiles and shoes, we are also exporting capital goods, something that is not well-known. We are exporti paper plants to Iran and Iraq. turnkey plants to Northern Ireland and France, chemical plants to China. We have the engineers to do that. We are exporting ships, which cost \$55m each, to Sweden. We are also exporting helicopters. Q: There has been much talk and controversy surrounding

asso exporting healcopiers.

Q: There has been much talk
and controversy surrounding
the development of a nuclear
power-industry in Indonesia.
How likely do you think it is
that Indonesia will build a
nuclear power reactor?

A: Our power requirements for

A: Our power requirements for the next six years are the same as required during the past 25 years. So it means that power requirements need to be developed and relying on thermal power only is not sufficient. We have to go nuclear one day. There is no doubt about it. Q: What role will foreign capital play in domestic power gen-

A: Mostly we will rely on foreign investment. Once we agree on the transfer price on the power entering our national grid system I think it will be clear enough.

or indonesia has embarked on a policy to privatise many of its state-owned industries, and privatisation of the telecommunications industry is already under way. What is the next step in this process and what other sectors will be included?

A: Sectors which have good prospects. Those sectors which have good returns and reliable returns. State-owned companies are among the biggest taxpayers in this country.

FINANCIAL TIMES SURVEY

NORWAY

Friday June 24 1994

A confident nation is wary of change

Polls suggest that most people disagree with the government over EU membership. Hugh Carnegy and Karen Fossli examine the pre-referendum mood.

orway's Labour govern-ment is poised this summer like a ski-jumper in mid-air, whose perfect take-off could yet end in a painful crash

landing.
Under the leadership of Mrs Gro Harlem Brundtland, one of Europe's most experienced prime ministers. Labour has skilfully prepared the way for the country at last to join the European Union - along with its fellow Efta (European Free Trade Area) members, Austria, Finland and Sweden – on Janu-

Labour, although a minority administration, is virtually unchallenged in power after strengthening its position in the Storting (parliament) in last September's general election. After long and difficult negotia-tions, it concluded an accession treaty with the EU in March, which even many sceptics within Labour welcomed as a good deal.

In the meantime, the mood of a crash landing in November. the nation has rarely exuded such self-confidence. The oilboosted economy is on the up after several laggardly years, and is set to grow by up to 4 per cent this year - one of the fastest rates in Europe. Great pride was generated last autumn when it was revealed that Norway had secretly helped two of the world's most bitter foes -Israel and the Palestine Liberation Organisation - to reach an-

historic peace accord. Earlier this year, Norwegians revelled in the international praise the country won for its impressive organisation of the Winter Olympics at Lillebammer and celebrated a record haul of gold medals by its athletes. To cap an unprecedented year for a nation devoted to sports, the Norwegian football

regulator

team qualified for the world cup finals for the first time since the

But for Mrs Brundtland and her government, these are mere diversions: the real test lies ahead in the shape of a referendum on EU membership, on Monday, November 28.

Despite several years' unequivocal advocacy of mem-bership by Mrs Brundtland (and most of the husiness community), opposition to joining remains deeply entrenched in Norway. Opinion polls have for months consistently shown the No camp with a majority of up to 56 per cent. Even many top politicians and government offi-cials privately doubt whether they can turn opinion around in

Memories of 1972, when Norwegians voted down a proposal to join the European Commnnity, destroying the Labour government of the day, are vivid as Mrs Brundtland seeks to avoid

The No campaign revolves round the widespread perception that EU membership involves a significant erosion of national sovereignty, will threaten the country's control over its cherished natural resources - especially oil and fish - and mean an end to Norway's long-standing policy of encouraging people to remain in the far-flung northern communities through heavy agricul-

tural and regional subsidies. These arguments proved decisive in 1972 and are hardly less potent now, in a country which only won its independence from Sweden in 1905 and suffered occupation by the Nazis during the second world war.

Opposition in parliament is led by the rurally-based Centre party, which, under the charis-

matic leadership of Ms Anne Enger Lahnstein, stormed to become the second largest party in the general election on the back of its fierce anti-EU stance. Outside the Storting, opposition is grouped under the well-organised "No to the EU" cam-

paign.
"Our side is much more finding it very difficult to gen-erate any momentum," says Mr Johan J.Jakobsen, leader of the Centre party's Storting group. "They are badly organised, while all the No groups have accepted that the No-to-the-EU movement co-ordinates all opposition activities.

Faced with this unpromising outlook, Mrs Brundtland has by no means been idle. Working closely with Mr Thorbjoern Jag-lund, who took over as official Labour leader in 1992, she has managed to keep the party together under a pro-EU policy, pite the presence of a large anti-EU Labour faction.

Above all, the government achieved an accession accord with Brussels which was sufficient to ensure that senior ministers like Mr Jan Henry Olsen, the fisheries minister, and Mr Bjorn Tore Godal, the foreign minister, who were in the No camp in 1972, are now firmly behind Norwegian membership.

orway made minimum concessions on allowing EU fishing boats more access to Norwegian waters, and maintained Olso's full control over fish resources in its northern waters until 1998. The deal requires little change in Oslo's control of oil concessions and its ownership of the national oil company Statoil. Norway's heavily subsidised farmers will

have to adjust to much lower BU farm prices, but will be cushioned by transition funds. Norway will keep its stringent environmental regulations and its state monopoly of alcohol

With the detail of the accession terms settled, the government - backed on the issue by the opposition Hoyre, or Conservative, party – could switch its campaign to the chief moti-vation for joining the Union: Norway's desire to be a partner in an organisation seen as shaping the economic and political future of Europe. "Norway has a natural place in this forum," insists Mrs Brundtland.

This, however, is proving a difficult case to make in a prosperous country, which has long Norway's former ruler, effec-

been satisfied with the security afforded by membership of Nato and already has most of the economic benefits of full EU membership through its participation in the European Economic

Area agreement with Brussels. Recognising this, the government deliberately engineered a sequence by which Norway will vote last on the issue - after Austria (which confirmed its entry in a referendum earlier this month), Finland and Sweden. Opinion polls show clearly that the best chance of winning a Yes vote in Norway is if Finland and especially Sweden vote Yes in their respective referendums on October 16 and

The irony of letting Sweden,

tively decide the issue is not lost on many Norwegians. The No camp still believes it can win even if Sweden votes Yes.

A No vote would be a huge blow to Mrs Brundtland, who has made EU membership something of a personal mission. Her government would also be badly wounded, having invested so much in the belief that it can turn opinion around. The opposition parties, though themselves deeply split, would doubtless seek a repeat of 1972 when prime minister Trygve Bratteli resigned.

But Mrs Brundtland insists this will not happen. "The Labour party is prepared to continue in power in the event of a No vote in the referendum," she told the FT (see page 3 of this

survey). "The country needs sta-ble leadership and firm government, and in the current political situation, the Labour party is the only political force that can provide this,"

Its policy under this "second best solution", she said, would be "to build on our membership of Nato, our associate membership of the WEU (Western European Union) and on the EEA agreement." A No vote is expected to have little economic effect. But the pro-EU side fears a longer-term drain on investment in the Norwegian economy, which could seriously damage the country as it begins to face the prospect of a decline in oil and gas earnings after the

turn of the century. This year, the economy looks

What if the people say no to Europe?

■ Since leading her Labour party to victory in September's general election, the main concern of prime minister Mrs Gro Harlem Brundtland has been to achieve approval for entry into the European Union. In the 1972 referendum, the No vote was devastating for Labour. What will be the consequences for the government if the answer is the same in the referendum due on November 28? On Page 3 of this survey, the prime minister answers this

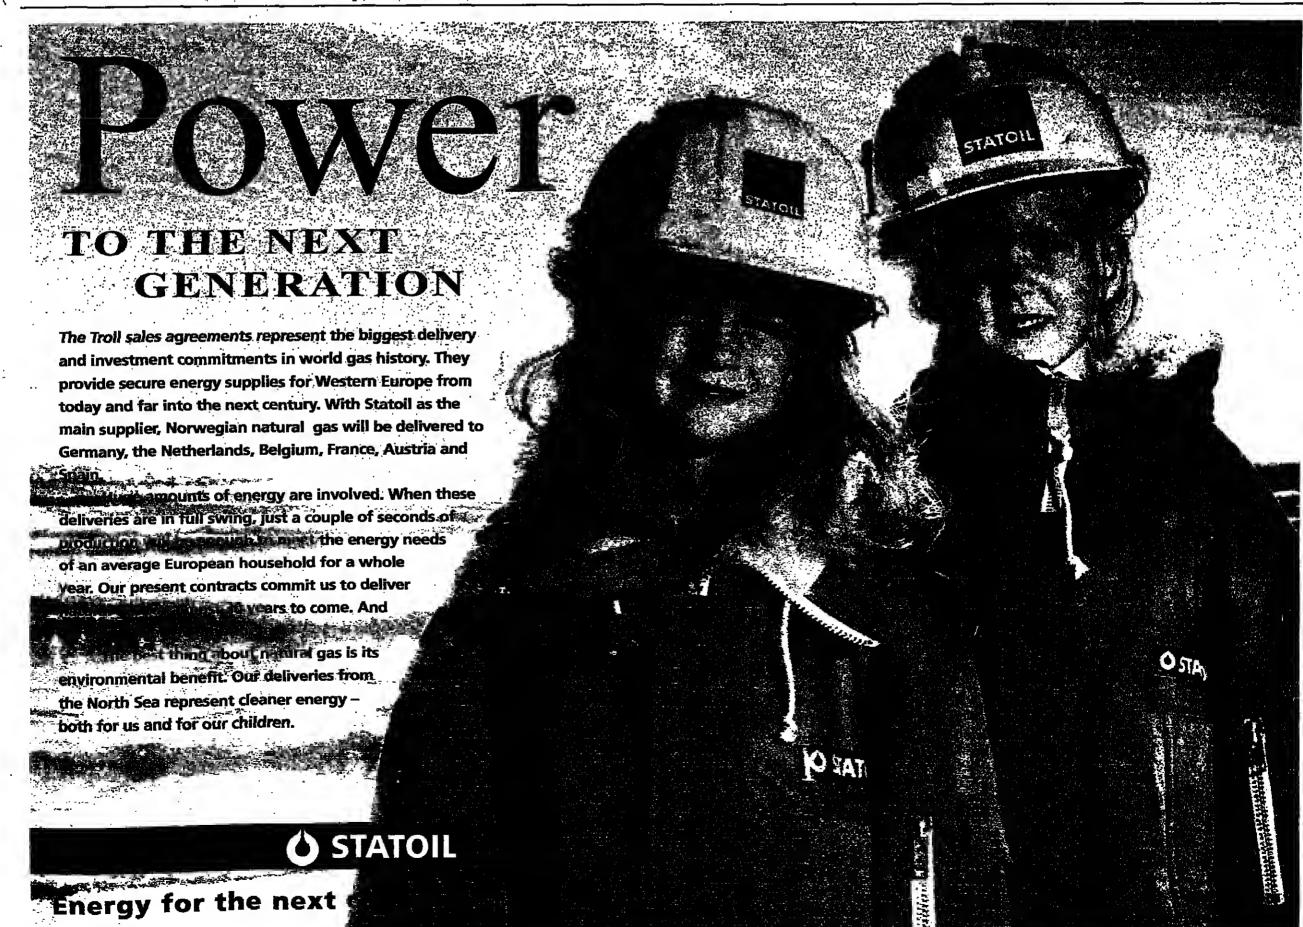

<u>ALSO</u>

and other questions.

The economy: filing the gap... Foreign policy: peace-broking.....2 The Ed: most people say no....... adustry: costs come down Banking: looking healthier Off: is it running low?... Profile: Statoil. Shipping: renewing the fleet...... (Tourism: looking upmarket...

stronger than for some time. The annual inflation rate is below I per cent. The current account is in surplus, and the central government deficit is set to decline. Unemployment, at an historically high 6 per cent

for Norway, is stabilising. But the economy has a core structural weakness in the narrowness of its non-oil manufacturing base, which the government and independent economists agree must be addressed. A decision to stay out of the EU would be a short-term relief to sheltered sectors such as the food processing industry. But in the longer term, much needed investment, to increase the volume of value-added production in Norway, could be jeopardised.

The economy: although most indicators are pointing upward, uncertainty lies ahead, says Hugh Carnegy

nations into the next century. This year, almost all the economic indicators are pointing upward after several years of recession and stagnation. The economy as a whole is set to grow by up to 4 per cent in 1994 and do even better next year. When oil and gas revenues are excluded, the forecasts still show healthy growth, with so-called mainland GDP expected by the OECD to increase by 2.25 per cent in 1994 and by 3 per cent

Inflation, at less than 1 per cent a year, is among the lowest in Europe. The total government deficit for 1994 is esti-

The government, the opposition Conservatives and most of the business community are in favour of joining the EU, but so far a majority of voters is still against joining

mated to reach 2.8 per cent of GDP, again among the lowest in western Europe. The balance of payments will show a large surplus of more than 2.5 per cent of GDP. Unemployment, the key domestic political concern, has stabilised and should fall slightly to 5.5 per cent of the workforce (although a further 3 per cent are on government training

In the next few years, how-ever, there are challenges to be faced which raise important question-marks over whether this optimistic outlook in the

Can the non-oil sector fill the gap?

short-term can ba extended into a pattern of steady long term growth.

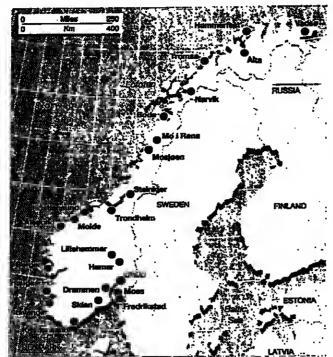

This autumn, Norwegians, along with their Nordic neighbours in Finland and Sweden. will decide in a referendum whether to join the European Union: the minority Labour government, tha opposition Conservative party and the vast majority of the business community say a vote against membership would threaten already low investment flows and weaken the economy in the long term - but so far a majority of voters are still

against joining.

Moreover, the stream of oil and gas revenues that has so boosted Norway over two decades is expected to start declining at least by the end of the century.

Norway has already suffered one big oil "shock", when prices fell dramatically in 1986. In the space of one year, the oil industry's contribution shrank from 18.5 per cent of GDP to 11 per cent. Over the subsequent years, heavy increases in production have pushed the figure back up to 16 per cent of GDP, but oil production will start to fall in 1996.

Natural gas revenues will help, at least for some years, to meet the shortfall. But the conern is whether the country's relatively weak non-oil economy, which is dominated by the public sector, will be strong enough to fill the gap as output from the petroleum sec-

tor starts going down. These worries have been exacerbated in recent years by a sharp deterioration in the public finances. An expansionary fiscal policy, adopted by the Labour government since 1990 to offset the rigours of recession, has led to a deepening of the state budget deficit (as distinct from the overall consolidated government deficit) to 12.5 per cent, excluding oil-related items.

In its latest report on the Norwegian economy, the OECD warned: "Unless this deficit problem is addressed. the implications for the future would be a reduced level of government expenditures or higher taxes relative to GDP.

The government is well aware of these longer-term difficulties and has set out, in a 1994-97 programme presented to parliament last year, a strategy for dealing with them. It is

hased on a significant tightening of fiscal policy, a move to hold down transfer payments in favour of infrastructural investments, and a general shift in emphasis from the pub-

lic to the private sector. Mr Svien Harald Oygard, the senior official at the finance ministry, says that already the effects of this programme are beginning to be felt. This year, public expenditure will rise by less than 1 per cent - well

below the levels of GDP growth. The growth in the public sector'e share of employment, which rose from 23 per cent to 30 per cent from 1980 to 1992, is set to stop.

Low recent wage settlements, a weakening of the value of the Norwegian krons since it was floated in late 1992 and a steady fall in interest rates over the past year have helped produce a significant improvement in the cost-competitiveness of Norwegian

"We feel now that we are achieving growth that has a sounder base, with further strengthening of our competitiveness and increased investments, and growth that is bet-ter balanced between the public and private sectors," says Mr Oygard. "I believe we will continue with an ambitious incomes policy and quite

Mr Steinar Juell, chief econo mist for Christiania Bank, gives the government credit for so far sticking to its programme to get the public finances under a tighter rein. But he still sees some warning lights in the longer-term per-

a strong tightening of fiscal policy to allow room for a mon-

etary policy that is not so

spective. He remains afraid that inflationary pressures will resur-face as unemployment comes down, and is worried by some evidence - such as a smart recovery in car sales - that mivate consumption might return to unhealthy levels. It is estimated to increase by 3 per cent

Although the savings ratio, at more than 5 per cent, is still comfortably positive - com-pared with alarmingly negative in the late 1980s - it is once again falling. "The turnaround has been much stronger than I had expected," says Mr Juell. "I thought people had longer memories and would be more

careful" Mr Juell and the OECD also share workies about the need for further structural reforms in the economy. Among these are the so-called sheltered soctor of the economy - industries such as agriculture and foodprocessing - which are pro-tected by subsidies and import controls.

If Norway votes to join the EU, such protections will have to be progressively removed. With agricultural assistance making up 77 per cent of producer income, some 75 per cent more than the OECD average, reforms are seen as essential in the long term to achieving a competitive and vigorous agro-industry. But staying outside the EU would remove the incentive to achieve each

necessary part of preparing the Norwegian economy for the time when oil revenues decline. It is not possible to do that much [to prepare for the post-off era) without adopting a centrally-planned economy, it is therefore all the more important to emphasise the competi-tivity of manufacturing indus-try," says Mr Juell. "We must avoid the mistakes of the 1970s and 1980s. Wa have to keep wages and inflation under control and eliminate the budget deficit. Then it will be easier to create alternative employ-

Foreign policy: the country's role as peace-broker has led to new tensions at home

Nato still seen as the basis for security

Israel-PLO accord, Norway has concluded an agreement with Brussels to join the European Union, a step deliberately taken to ensure that the country stands inside the organisation seen as driving long-term political and economic strategy in Europe.

The Middle East peace accord led to a burst of goodwill for Norway from around the world.

The Norwegian electorate has once before rejected membership of the European Community, in a referendum in 1972. As the campaign builds for the new referendum in November, the tension eign policy are again evident - and could have an effect on the outcome of the vote. "Norway has a strong tradition of ideal-

ism in foreign policy and a weak strain of realpolitik," says Mr Nils Morten Udgaard, 1990, been helping to mediate between the

daily newspaper Aftenposten. "What bappened in the Middle East is part of the idealistic tradition. If the idealistic tradition becomes too strong, it could suppress those features of realpolitik such as relationships with the large European coun-

The so-called idealistic side of foreign policy identified by Mr Udgaard is certainly strongly in evidence at present. In the Middle East alone, Norway now has nine areas of involvement. These include: chairing a donors group responsible for steering international aid funds to the new Palestinian self-rule authority, and provision of observers helping in the effort to suppress violence in the West Bank town of Hebron.

in efforts to bring peace to former Yugoslavia, with its former foreign minister, Mr Thorvald Stoltenberg, acting as the United Nations peace envoy. It has, since

a foreign policy commentator for the two sides in the internal conflict in Guatemala. Lately, Norway has hosted at least one meeting to probe ways of achieving peace in Sudan.

Such involvements have grown out of a Norwegian commitment to providing foreign assistance that has seen aid efforts extended to 100 countries over the past 30 years. Mr Jan Egeland, the deputy foreign minister who was closely involved in the Israel-PLO talks, says the Norwegian method of administering assistance through non-governmental agencies has allowed Oslo to build up trust, and to provide discreet channels of communication between warring partles without involving large numbers of government

Those campaigning to keep Norway ont the invaluable international prestige it has won the country - will be jeonardised by joining a union committed to harmon-

ising foreign policy stances. But Mr Egeland insists that this is not

by joining the EU. There is nothing involved in membership that will stop us taking initiatives for peace and democracy around the world, covert or overt. In fact, joining the EU will be a net gain for us, because we could rely on the networks of the EU, especially in follow-up work,"

Norway has also been deeply involved in efforts to bring peace to the former Yugoslavia

The government is nevertheless acutely aware that the EU's commitment under the 1991 Meastricht treaty, to work towards common foreign and strategic policies, is regarded with deep suspicion by many Norwegians wedded to Oslo's role as an independent peace-broker.

This may seem in conflict with the

country's long-established and long-accepted membership of Nato. But Nato membership is seen as a vital element in

the country's defence policy, distinct from deeper political involvement in Europa. The government is therefore stressing that Norway wants to see the maintain ance of Nato as the key to the country's security, and does not intend to upgrade its current observer status within the Western European Union.

Norway has two feet - one Atlantic foot and one European Root," says Mr Ego-land. "This makes us feel very strongly that we need Nato for the Affantic leg."

Norway, the government argues, must join the KU to be able to influence developments in Europe. "We should go in to be able to shape events in out part of the world. It is better to sit at the table than to stand out in the hellway," says Mr

With a strong currency, low inflation and a relatively small budget deficit, Oslo is also a potential "core" member of the drive towards a European Monetary Union set out at Maastricht. But talk of any kind of political union is unpopular and played down by the government.
"The problem is." says Nils Mor

Udgaard, of Aftenposten, "that the decisive issue in the EU debate is solely political, and that is very difficult to sell."

Trying to win it the Ali way

At first sight, the bid by prime minister Gro Harlem Brundtland's minority Labour government to persuade Norwegians to join the European Union looks like an exercise in political mas-

In 1972, Norwegians voted no in an earlier referendum on the question, after a bitterly divisive campaign that toppled the Labour administration of the day and prompted the resignation of the then prime minister, Mr Trygve Bratteli. Twenty-two years on, the country appears to be, if anything, more hostile to EU membership. Opinion polls have for months shown opposition - excluding undecided voters - at around 55 per cent, ahead of the 53.5 per cent major-ity achieved by the No side in

Senior government officials freely acknowledge that the task of reversing this obstinate trend in time for this year's referendum on November 28 will be, at best, extremely difficult.
"We have said all along that if we get the campaign right, we

all," says an aide to Mrs Brund-

from the government side to date has been on preparing the ground for a Yes campaign that will not move into top gear until after the summer holidays, rather than campaigning itself. This is partly to ensure that the Labour party, in particular, does not splinter over the issue despite the anti-EU stance of many of its supporters. But it is also a deliberate attempt to try to draw the sting of the No side before the last vital few weeks

The prime minister's aide likened the tactics to those once To that end, the emphasis employed by former world heavyweight boxing champion Mohammed Ali. "We will take

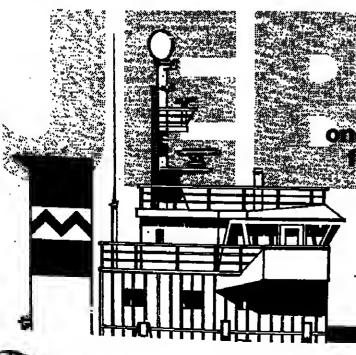

all the punishment and then try to hit them at the end." So far, the government's plan has gone well - notwithstand-ing the lack of movement in the opinion polls. Labour survived a surge in last autumn's general election by the fiercely anti-EU Centre party which saw the opposition Conservative party the strongest advocate of EU

third place in numbers of seats in the Storting (parliament). The accession agreement secured with Brussels in March was accepted as favourable by key sceptics in the government, notably Mr Jan Henry Otsen, the fisheries minister. Lately, e Labour party congress has seemed set to endorse EU membership as official party policy.

Above all, the Yes vote in this month's Austrian referendum has started e bell rolling, which Mrs Brundtland hopes will pick up speed with a Yes vote in fellow epplicants Finland and Sweden in October and mid-November, creating a momentum which will turn the issue her way in Norway.

Cructally, opinion polls in Norway have shown e small majority for joining the EU if neighbouring Sweden, where opposition is also still very strong, decides to join. EU supporters believe large numbers of voters - perhaps 40 per cent or more - are still undecided or persuadable

Divided over Europe

Continued from facing page

Mr Johan J. Jakobsen, former leader of the Centre party, now leader of its parliamentary group and a leading figure in the well-organised No campaign. admits that a Swedish Yes vote would make for "a very close race" in Norway. The other side of the coin, however, is that a Swedish No would all but ensure e Norwegian No. Given the great uncertainty that still surrounds the outcome in Sweden, the No side in Norway remains extremely confident

that it will prevail. In 1972, the key factors in the No victory were the fear of the politically-important fishing communities that allowing outside fishermen access to Norwegian waters would devastate already depleted stocks and a broader fear that a process of population shift away from Norway's remote northern regions would be accelerated by mem-

There are strong echoes of these themes again in the new No campaign. "The main issue is the question of democracy." says Mr Jakobsen, "Many Norwegians feel the EU is developing in a direction in which nocracy will be diminished They are against an integrated, federal Europe. They fear we will have no influence and too much power will lie in the

hands of bureaucrats." Secondly, he says, there is a fear that Norway's control over its natural resources - its oil and gas, its fisheries, minerals and water - will be subjugated to policy made in Brussels. This in turn, he says, will mean Norway will have less ability to sustain its policies of sustaining rural communities through big regional and agricultural subsidies and of maintaining the

edges the potency of these arguments in a country jealous of its independence, which it won from Sweden only in 1905 and which was interrupted traumatically by Nazi occupation during

the second world war. "I believe if you analyse all the important elements in the popular resistance to membership, it boils down to uncertainty, fear and insecurity about everything from defence to unemployment," says Mr Arve Thorvik, leader of a group of prominent people who campaigned for a No vote in 1972. but now favour membership.

The Yes side's attempts to overcome these fears have so far been ineffective, however, Norway's membership of the European Economic Area market access agreement with the EU means most of the trade benefits of full membership have already been achieved. Politically, the argument that Norway, already a member of Nato, needs to deepen its involvement in European moves towards mmon security policies is undermined by conflicting sig-nals coming from inside the union of what its existing mem-

bers want to achieve. "We have to sell an argument that is hard to sell these days, and that is solidarity," says Mr Thorvik. "There is no immediate economic argument for entry, the main argument is political and it is difficult to sell an EU which itself is lacking in

What the Yes side is left with is the worry that Norway will be left isolated if it stays outside the EU. But Mr Jakobsen is unimpressed by this line of attack. "We are not afraid of that," be says. "Norway is in Nato and plays a role in so many international organisations. Norway will always be an interesting partner for other

rs Gro Harlem Brund-tland first became

Since leading her Labour achieve approval for Norwegian entry into the European Union in a referendum due on November 28 this year.

It is a project that flies in the face of heavy popular opposition. If she fails to win a Yes vote, her future as prime minister will inevitably be cast into donbt. Mrs Brundtland answered the following questions for this survey:

A: The accession treaty (agreed with Brussels in March) shows that Norway is velcome in the EU. It includes satisfactory solutions to issues of vital importance to us, such as control over natural resources and an active regional policy. Norway would benefit from participation in the decision-making process in the EU, and would use its infinence to intensify co-operation to promote employment, equitable social development, environmental protection and peace between the countries of Europe. As a member of the EU, we would continue to pursue the main lines of the economic and foreign policy we

prime minister in 1981, and has gone on to become the dominant figure of her generation in Norwegian

party to victory in last Sep-tember's general election, her overriding concern has been to

Q: What are the issues upon which you will fight the campaign for a Yes vote in The prime minister replies to questions put to her by **Hugh Carnegy**

dent states. This co-operation must be developed gradually. with a view to meeting challenges and resolving problems that cannot be dealt with by countries on their own. We are in favour of stronger decisionmaking mechanisms in areas where it is necessary to intensify efforts to promote sustainable development and stimu late employment. At the same time we subscribe to the principle of subsidiarity.

Q: With oil production soon set to start falling, there appears to be an inhereot weakness in the mainland economy which threatens the loog-term prospects for the economy as a whule. What are you doing to address this? A: The government has pur-

sued a policy in which the fiscal and structural policy measures have been designed precisely to stimulate ecocomir development and employment in the mainland economy. There are many signs that this is now yielding results. We are making acuve use of the public budgets to increase employmen: strengtheo the private sector and invest in expertise and other infrastructure. Now that the economy has entered a phase of relatively vigorous growth, it is important to strengthen the country's financial position. The deficit on the fiscal budget will also be reduced this year and further next year. It is true that our oil production will be reduced in a few years' time, but given the increase in use production, the production on the Norwegian shelf will continue to be a mainstay of the economy for many years to come, Increased way will therefore enable us to maintain balanced growth. The cost-competitiveness of the Norwegian economy has improved considerably and the prospects for the mainland economy are better now that they were a few years ago This means we are becoming less dependent on oil,

Lawyer, 47, accepts daunting brief

Mr Jan Petersen, the new leader of Hoyre, Norway's Conservative party, has a political mountain to climb. Beaten into third place in last September's general election by the Centre party, Hoyre's traditional position as the main opposition to the ruling Labour party has rarely been so under threat. With deep differences now dividing Hoyre and the Centre party, the prospect of the Conservatives again leading a non-socialist coalition government, as they did to the 1980s,

But Mr Petersen, a 47-year- cacy of Norwegian memberold lawyer with 13 years experience in the Storting, is undaunted. He faces, he admits, a marathon task. But, he insists: "There is no such thing as the end of history. The surest thing in politics is that it is very difficult to make predictions. We have to believe that we will make it into government again."

The last time Hoyre led a government was as recently as 1990. But the administration collapsed after barely a year in office, irrepairably split between Hoyre's strong advoship of the European Union and the equally strong anti-EU stance of the Centre party.

The low point for Hoyre came in last year's election when the party was for the first time overtaken as the biggest non-socialist party by the Centre party, winning less than 20 per cent of the vote. It was a far cry from the party's heyday in the early 1980s when, under former Prime Minister Kare Willoch, Hoyre polled almost 32 per cent of

KVÆRNER

What does Æ mean?

For Kværner, the letter Æ has a special meaning. In our language it stands for Advanced Engineering worldwide. KVÆRNER, Norway's largest independent industrial corporation, is an internationally leading, technological, environment-friendly Group, with important establishments in major markets.

Advanced Engineering Solutions in Shipbuilding

Kværner is Europe's largest shipbuilder and leads the world in the construction of purpose-built vessels for LNG-transportation, the cruise industry and fast ferries, as well as for special carriers for chemicals, cables, containers and food.

Advanced Engineering Solutions in Oll & Gas technology

Kværner Oil & Gas plays a crucial role in the Norwegian and British sectors of the North Sea in addition to serving international offshore markets. Kværner supplies turnkey solutions for oil and gas production systems.

Advanced Engineering Solutions in Mechanical activities

Kyæmer's Mechanical Engineering activities centre around energy production and utilisation of natural resources. The company's cutting edge technology encompasses hydropower, thermal power, subsea production solutions for oil and gas, wood processing, fish processing and waste management.

Advanced Engineering Solutions in Pulping technology

Kværner Pulping's product range comprises systems and components for environment friendly production of chemical pulp for the paper industry. The main products are fibre lines and systems for chemical and energy recovery.

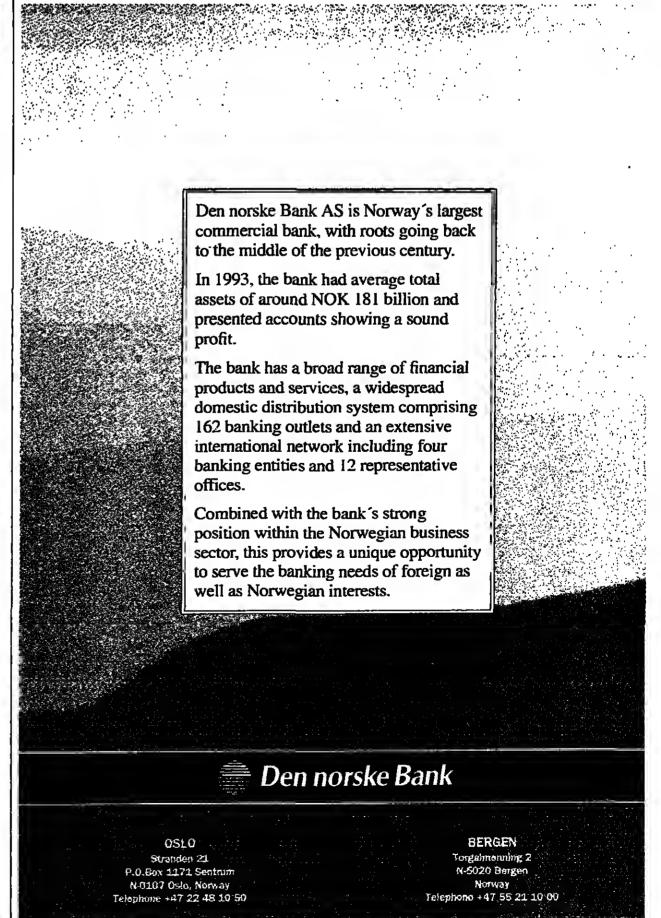

Advanced Engineering Solutions in Shipping

Kværner Shipping owns and operates gas tankers and reefers (refrigerated fruit ships). It has the world's largest fleet of medium sized gas vessels. Kværner Shipping takes advantage of pooling to enhance market influence.

KVÆRNER'S operating revenues amounted to £2.2 billion in 1993, 23 per cent up on 1992. Operating profit for 1993 stands at £120 million, an increase of 42 per cent on the year before.

Contemplating Europe

year clawed its way out of the doldrums, where it had been trapped for more than five

The return to profitability has been spurred to a great extent by an improvement in the domestic economy, which was helped by a sharp increase in oil activity, rather then a marked improvement in main export markets.

For the past two decades, the country's land-based industry has remained largely in the shadow of the petroleum industry. "The manufacturing sector has been driven mostly by the oil industry, which has entered a period of decline," according to Mr Tor Steig, the chief economist at the Confederation of Business and Industry (NHO).

This means that the prospects for the sector are mixed: the driving force of all industry is entering a downturn, while export markets are only beginning to show signs of recovery. This means that investments in capacity are likely to remain on hold until export markets pick up momentum and the issue of membership of the European Union is clarified.

Norwegian industrial comnetitiveness has nevertheless improved sharply over the past few years, mostly because of modest wage settlements and improved cost-competitiveness. rather than domestic currency

A recent report on Norway, by analysts at Kleinwort Benson, concluded that the Norwegian cost base in 1977 was an estimated 26 per cent higher than that of its main competitors, but has since narrowed to about 11 per cent, having improved by as much as 8.6 per cent over the past year. The differential is forecast to narrow to 2 per cent by the end of

In many ways Norway could be compared to a developing country, for its main exports consist mainly of raw materials rather than finished products. Manufacturing industry accounts for just 15 per cent of gross domestic product, which is considered a minimum for modern industrialised coun-

until the results of the referendum are known.

The government, however, forecasts that investment by non-oil industry will increase by 5.25 per cent this year and that the mainland economy

will expand by 3.5 per cent. Mr Steig believes the government's forecast for private consumption, at 3 per cent, is grossly underestimated and that it is more likley to grow by 8 per cent. He says that

Nearly 90 per cent of industrial leaders polled said EU membership would have a positive effect

each percentage point increase to vote yes in the referendum. in private consumption trans-lates into NKr800m in extra In a recent survey, nearly 90 per cent of 310 industrial lead-VAT revenue for the governers polled said membership would have a positive effect on ment, and in 1994 could create 20,000 jobs, but that industry will nevertheless in future rely With the exception of the food-processing industry, many more on exports than on of Norway's industrial leaders

as its main fuel for growth. NHO is optimistic about the prospects for mainland industry, whose order book rose by 9 per cent from the third quarter of last year until this year's first quarter, with exports to Europe's automobile industry being the driving force.

The order book for the metals industry alone rose by 11 cent in the same period, but Mr Steig points out that the Norwegian economy is at an early stage in the overall upturn of the European economic cycle.

One of the stronger sectors emerging is the furniture industry, whose exports soared by 13 per cent between last year's third quarter and this

industry may even decline year's first quarter interim. After near collapse, caused by Norway's recession, the industry reoriented its strategy towards exports.

> Mr Arve Thovik, head of the Federation of Norwegian Process and Manufacturing Industries, is caubous in his optimism about the strength of Norway's export markets. "Until Europe finds its way, it will be difficult for Norway, as the future production natterns of Europe are only just being established," he believes.

> Mr Thorvik thinks membership of the EU would allow Norwegian land-based industry to remain in Norway, in spite of the distance to markets, higher taxes and higher costs. "If we join, we know we will be part of the structural decisions to be taken in the EU, and this will affect our investment decisions and long-term strategies. The uncertainty will be removed,"

> In the event of a No vote, Mr Thorvik does not believe there will be a mass exodus of industry from Norway, but that investment in capacity will be made in companies with operations outside Norway, causing value creation for Norwegian industry to stop up.

He heads a lobbying group called "From Nel til Ja" ("From No to Yes"), consisting of members who rejected membership in 1972 but will vote yes in November. "I would rather see Norway enter the EU ready and willing than a Norway which grudgingly backs into the EU like some other countries have," be said.

hen, in 1988, Erik Tonseth took the helm of Kværner, Norway's second biggest pub licly-quoted group, he started to look for a yard which could be acquired to build ships for the company's fleet.

Little more than five years later. Kvaerner has become Europe's biggest shipbuilder. and one of the three biggest in the world, and Mr Tonseth has led a successful expansion of the group in which sales and profits have more than tripled.

About 35 per cent of Kvaerner's sales are generated from shipbuilding; oil and gas contracting contribute 30 per cent mechanical engineering 20 per cent, pulping 11 per cent, and shipping 4 per cent.

Shipbuilding revenue is expected to increase by NKrl.5bn to NKrl0bn in 1994. But Mr Touseth is is in no vote on EU membership would have on Kyaerner's future: We would have to consider if it would be good for us to remain in Norway. About 40 per cent of our shareholders are outside Norway, along with two-thirds of our employees. Both these proportions will increase substantially in future, so we could not afford to remain in a closed, nationalistic environment."

Although Norway's long tradition as a maritime nation has probably been the single biggest factor influencing Kvaerner's industrial participation, Mr Tonseth does not believe the country is unique. "We could be in Switzerland as a financial holding company and survive, but we could not have a vigorous, active management based there. We could be in Britain or elsewhere... But wherever we are, it must be in an environment where there is interest in our industry."

Evacruer's expansion into shipbuilding began in the sum-

acquired the loss-making Govan shipyard on the Clyde, in Scotland. The plan was to build gas carriers for Kvaerner's fleet. Five years later, the long-troubled yard achieved its first profit in 30 years. And this year it is forecast to make a profit of \$5m.

"In retrospect, the acquisi-tion was not the best decision," admited Mr Tonseth. "We had many ex-shipbuilders but no active shipbnilding

mer of 1988, when the group building foreseen by the acquired the loss-making group, and without requiring

We believed that, with our resources, we could become a major factor in this industry. We were very convinced that by 1985 the shipbuilding market would improve. So, establishing that strategy, we bought the Masa-Yards in Finland and four small yards in Norway."

The acquisition of the four Kleven yards has been a success for Kvaerner. These

Enk Tonseth now says the Govern purchase was not the best decision

a yard which desperately needed new management and a new way of thinking was a fairly ambitious move.

"Govan also needed total support from its new owner. At the time, Kyaerner was not really in a position to give this level of support to the yard, which is why it took so long for us to turn it around."

Evaerner's strategy was then to acquire a yard which could not only meet the group's internal demand for ships but could also participate in an unswing in ship-

competition among the banks

yards already had good management and a good reputa-tion in the market," explained Mr Tonseth. With our resources, they were able to take on higger engagements than they otherwise could have managed, because of their fairly limited financial flexibility. These yards are regarded among the world's best when it comes to building

chemical carriers and rectors. The acquisition of Mesa-Yards has also been a success. The two yards, to Asho and Heisinki, are among the most

technologically advanced in the world, and came equipped with strong leadership and

It also helped the yards competitiveness when Finland floated the domestic currency in 1992, resulting in a devaluation of the markka. This underpinned the yards' bld to win a substantial contract last year - in competition with Japanese and Korean yards to halld four LNG carriers for the Abu Dhabi National oil

mouny. "The Masa-Yards have a proud history, and were besi-cally good yards which needed a willing shareholder to help them realise their potential. They have done outstanding work and this has become a successful marriage," Mr Too-

Last year, Kvaerner acquired Warnow Werft, in ostock, in eastern Germany for a symbolic sum and a pledge to modernise the yard which is about 20 per cent complete. While it is too early to judge whether Warnow has n a successful acquisition, it did schieve satisfactory results in 1983; and operations

reeded expectations.
"Our motivation to acquire Warnow was not specifically with shipbuilding in mind, but for Kvaerner to secure a major industrial engagement in Germany," explained Mr Tonseth. In retrospect, I would say that we have falfilled expectstions relating to the yard, which has advanced significantly since we became

involved." Kynerner's next objective for is to establish a bridgehead in China. The group is currently seeking to negotiate a joint venture with the Chin the Dallan New Shipyard. "If China is a waiting grome, there is no urgency on our part," said Mr Tonseth.

Karen Fossli

The banks look healthier after a period of crisis, writes Karen Fossli

The state maintains its grip

period of consolidation and massive credit losses, Norway's banks returned to profit in 1993, emerging from the country's worst banking crisis since the A near-crash of several

fter a gruelling five-year

Economic Area, the largest hanks forced the government Investments in industry have to undertake a far reaching rescue operation, which subsebeen declining for several quently made the state the bigyears, and while the government is optimistic that overall gest sharebolder in the top investment in Norway will three commercial banks, in what is proving to be a lucrainvestment in manufacturing

During the past five years, the commercial banks alone were forced to cut staff by a third, close 40 per cent of their domestic branches, retrench reduce operating costs by nearly 30 per cent in real

Only this year have they been able to concentrate efforts on maintaining market share. though concern is being expressed over what appears to be relaxation of lending prac-tices in the face of heated competition - a key element of the crisis, which engulfed the banks in the first place and resulted in unprecedented high

levels of credit losses. Nevertheless, the banks' asset quality during the past year has improved, helped by a steady upturn in Norway's oildependent economy, which is rebounding from a seven-year recession that began when world crude oil prices in 1986 plunged to their lowest level in more than a decade.

Because of the economy's upturn, which began last year, the banks have seen a consistent decline in the level of nonperforming loans during the past few quarters, and consequently improvement in loan loss provisions.

Despite the banks' improved health, the minority Labour government has stressed that the state will maintain until further notice a majority shareholding of at least 50 per cent of Christiania Bank and Den norske Bank (DnB), the country's two biggest banks. The state also owns all the share capital of Fokus Bank, the third biggest commercial bank, which it is likely to shed. -The state last year, however, reduced its stake in Christiania

Bank to 68.9 per cent, from 98.8 per cent. But last December the it lifted its DnB shareholding to 87.5 per cent from 69 per cent in an unpopular move in which it converted NKr3.5bn in preference capital, which it shares to once again shore up the bank's weak foundation.

The preference capital was converted into shares with a face value of NKr10, but with DnB's shares trading at an average of about NKr18 this year on the Oslo bourse, the move by the state was not only astute but also quite lucrative. Since 199,1 Christiania has

received more than NKr9bn in state support, while DuB has received more than NKr7bn, but the government has not escaped criticism of the way it handled the crisis.

A report published recently pointed out that the Benk of Norway, which has been in charge of administrating the stata's shareholding and investments in the banks, has earned more than NKr18bn from the banking crists - at the expense of the banks' former shareholders who were, in some cases, forced to nullify the value of their bank shares - in the form of shareholdings and interest on loans supplied to the banks by the central bank when the banks, suffer-ing from a lack of foreigners' confidence, had difficulty in

raising capital outside Norway. Nevertheless, the government has pronounced the banking crisis dead and, for the first time in many years, Christiania was able to tap the

domestic market for capital, beginning to express concern Last December, it raised NKri.88bo in fresh equity through a successful share issue. It helped that the bank had reduced net non-performing loans to 5.6 per cent of total loans at the end of 1993, from 7.1 per cent at end-1992,

and that the outlook for the economy was bright and expec-Commercial banks

ted to be brighter this year and

DnB is currently finalising plans to undertake a share issue in the second quarter of this year, to raise about NKr2bn Of this, NKr1bn will represent a share capital increase, while the remainder will derive from a sale of DnB's

shares held by the state. Both Christiania and DnB returned to profit last year. benefiting substantially from securities' gains resulting primarily from a rise in bond prices as domestic interest rates fell sharply. Underlying performances improved, how-ever, and should be sustained if the banks have learned the lessons of past sins and avoid the lure of rapid credit expan-

Norway's regulators are

to finance loans to the highest degree possible, irrespective of property values

However, Mr Trond Reinert-Norwgian Banks Association, shrugged off suggestions that the banks may fall into old routines. "Credit demand will grow in line with growth of domestic consumption, per-haps a little stronger," he said. Credit demand in the past year has been moderate, increasing by between 1 and 2 per cent, while the banks have seen credit expansion of nearly 7

Mr Reinertsen argues that this level of growth is only natural, following a five-year period in which there has been little credit demand as households have struggled to reduce debt and consolidate savings in the midst of Norway's reces-

This is not a credit-financed expansion but credit financed by growth in incomes," he explained, adding that Norway's economy is currently strong rising from a very low level. "It has been a number of years since there has been credit expansion."

According to the government, the economy showed .21 per cent from 28 per cent. strong growth in the second (excluding off and shipping) grew by nearly 2.0 per cent from 1992 to 1993. The government is predicting a further upturn in the mainland econ-omy this year, fuelled by increased private consumption

and housing investments, The household savings ratio is expected to fall by one percentage point to about 4.25 per cent this year and total GDP growth is forecast at 4.0 per

conomy is forecast to increase by 5.25 per cent this year; while investment in the petroleum sector is expected to plummet by 8 per cent after hitting a historically high level

Mr Reinertsen warns, bowever, that the issue facing policymakers is to cut back on government spending to allow private consumption to expand further. Government spending, currently about 8 per cent of GDP, must be reined in he says. By comparison, the Bank of Norway estimates the banks' underlying credit expansion at close to 11 per cent in the past year, and believes the expansion has been between 9 and 11 per cent during recent months.

Mr Sigbjoern Johnson, finance minister, recently warned the banks not succumb

to past habits. "We are not in a position to repeat the mistakes of the 1980s," he said. "There are recent examples which suggest that the lessons learned from the past have yet to take bold," he told a recent confer-

Norway's savings banks account for the strongest growth in housing lending, while the commercial banks! growth has been finalled more by corporate lending. The savings banks, since 1987, have boosted their market share for private loans to 38 per cent from 28 per cent, at the expense of commercial banks whose market share shrunk to

In March, Christiania, DnB the country's biggest savings bank, received a fillip when the IBCA, London based rating sgency, upgraded the individual, short-term and long-term ratings of the banks, reflecting their return to profit last year, the positive outlook for the economy and the continuing strong support of the state.

Statoil, the Norwegian state oil company, believes that, while the 20th century was the age of oil, the 21st is set to become the gas era, particularly as concern for the environment becomes the driving force behind the growth of gas consumption.

Profile: Statoil, whose future has been assessed by a leading investment bank

State giant is obliged to explore overseas

development nn the Norwegian continental shelf, and began basically as a two-man show and a telephone, managed by Mr Arve Johnsen until 1988. It expanded rapidly into downstream operations with Mr Johnsen at the helm, and by 1984 began managing the state's direct financial investment in petroleum

Mr Harald Norvik succeeded Mr Johnsen in 1988, and currently oversees 12,000 employees within and ontside Norway. He is faced with the daunting task of finding more oil elsewhere in the world to maintain the group's output and reserves; and, to this end, he established an alliance partnership with British Petroleum nearly five years ago, to help shoulder the burden of expense related to foreign operations.

principal operating units: exploration and production, natural gas, refining and marketing, and petrochemicals. GSI ranks Statoil as the seventh largest independent

oil company in the world. Last year, its total production reached 204m barrels of oil equivalent, or 560,000 b.o.e. per day. By the end of 1993 reserves stood at 3.87bn b.o.e, giving a reserve life of 19 years.

In order to improve its declining oil production profile, Statoil has embarked on an ambitious international exploration search.

"Recent successes in the Far East. combined with the enormous growth potential of the former Soviet Union, make this new business develop potentially high-growth, though high-risk, area," GSI said.

proved reserves upwards by about 191m b.o.e., or 33 per cent of total production, hnt GSI believes there is significant upside potential for the estimate.

The US bank forecast that Statoil's total production would fall from 221m h.o.e, this year to 178m, or hy some 20 per cent, by the year 2000, with the outlook for oil even more dramatic, in line with the general prognosis for Norway's

With the important fields of Statiford, Gullfaks and Oseberg in decline, Statoil's oil production is expected to fall by 35 per cent to 124m barrels by the year 2000. "With no immediate prospect of significant discoveries on the Nnrwegian

immature and uncertain nature of Statoil's international exploration potential, it is unlikely that Statoil will be able to change the trend in oil production in the near term," GSI said.

The US bank points out that the most significant discovery on the NCS since 1986 has been the Norne field, operated by Statoil, with peak production from this field expected to be around 14.6m barrels a year - or 12 per cent of the peak

production from the giant Statfford field. "On the international side, only the Azeri and Chirag fields in Azerbaijan offer the potential for significantly boosting Statoil's oil profile," GSI said, hnt warned that, given the unstable political environment in the region, Azerbaijan should not be relied on to fill

At the same time, Statoll faces rising production costs, lower revenue generated by pipeline tariffs and uncertainty over

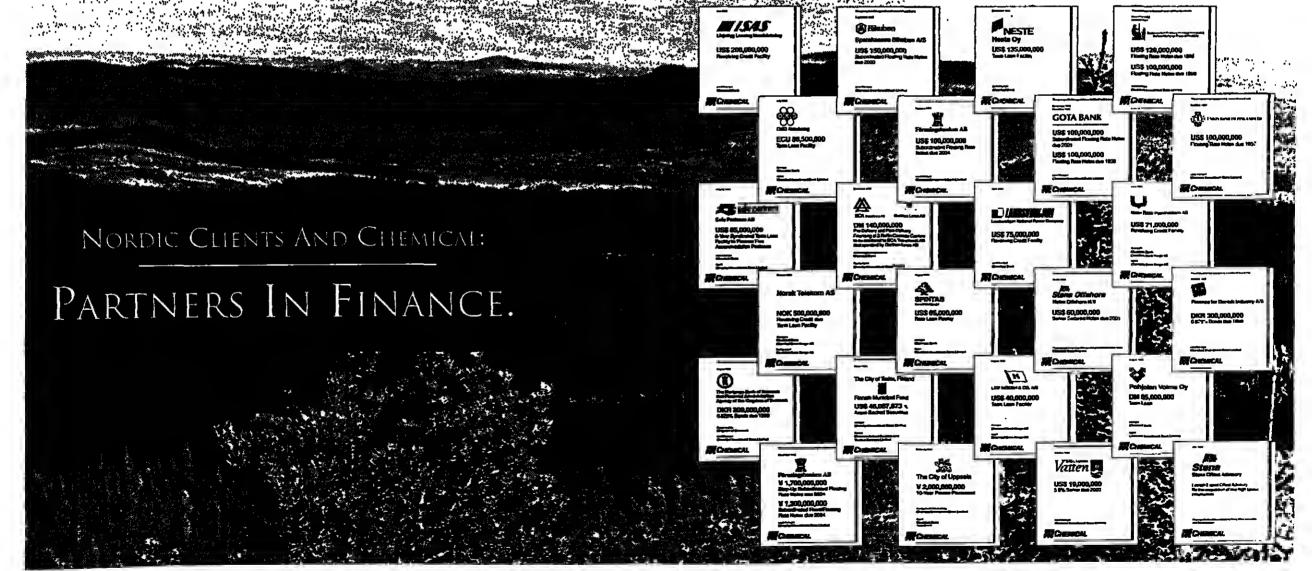

future gas contracts, according to GSI. Concern is expressed over Statoli's ahility to formalise new gas sales contracts, which entrently amount to 3.0bn cuhic metres ennually and are

expected to more than triple by 2002. However, the bank believes that by then Statoil may be competing with cheaper supplies from other domestic producers or a mnre politically stable Middle East.

"Should Statoil not be able to tie in sufficient snpply contracts for its gas. then some developments may well be delayed, which would further negatively impact the company's overall declining production profile," GSI warned.

Nevertbeless, Statoil benefits from a well-protected Scandinavian retail market, in which It has captured a 25 per cent share, owns two modern complex refineries and, hy 1995, will be well-placed to reap rewards from a forecast apswing in the European petrochemicals industry.

Karen Fossli

Chemical Banking Corporation's long success in the Nordic region springs from our historic commitment to strong and mutually valuable relationships with our clients.

For decades we have concentrated on the global and local financial needs of major Nordic companies. In addition to our global presence, our bankers and specialists are fluent in local

languages and deeply knowledgeable about local markets and government requirements.

During challenging economic times we have helped our Nordic corporate clients raise US\$3 billion in new capital. To do so, we used our skills as Euromarket securities underwriters, arrangers of private placements and global loan

syndicators, where Chemical ranks number one worldwide.

In risk management for Nordic clients, Chemical is a leading provider of sophisticated foreign exchange and interest rate hedging products.

As global leaders in energy finance, shipping, cross-border investment and foreign exchange, we serve the broadest range

of financial needs for our Nordic clients. We can bring into focus the full resources of Chemical worldwide, and at a time when other banks have retreated from the international arena, we have continued to support our clients.

Contact Chemical to discuss your financial requirements. We're a partner with many strengths.

EXPECT MORE FROM US."

NORWAY 6

orway is one of the few nations that can boast a long maritime tra-dition, but the industry is undergoing the kind of restructuring not experi-

Maritime activities account for 15 per cent of gross exports, making shipping the country's third biggest export industry, and employs 61,000 people. The maritime environment consists of everything from shipowners to brokers, shipyards, ship classification, maritime research, design and engineering, specialised law firms and banks geared towards ship-financing.

The country's insurers and underwriters form the second biggest marine insurance markets in the world, after London.

Last year gross freight revenue for the Norwegian-controlled merchant fleet, the fourth largest in the world, rose to an estimated NKr45bn from NKr42bn in 1992, after hitting NKr50bn in 1991.

Even the shipping sub-index on the Oslo bourse is recognised as one of the most comprehensive shipping lists in the world, consisting of 38 foreign and domestic shipping companies with a combined market capitalisation of around NKr35bn.

After a period of difficult market conditions, the shipowners are cautiously optimistic about prospects for 1994. According to R.S. Platou Shipbrokers there was an improvement in tonnage balance in 1993 -despite disappointingly weak growth of OECD countries - thanks to strong eco-nomic expansion in China and massive oil

"Without these two components, tonnage balance would most likely have deteriorated with falling freight rates and ship

mer earlier this year. The target is the the

orway has launched an ambitious campaign to encourage tourism. in the hope of capitalising on the success of the Winter Olympics in Lilleham

Domestic taxation is causing distress signals among shipowners, reports Karen Fossli

Fleet renewal may need foreign capital

values as the consequence. Instead, there was a moderate increase in freight rates." according to Platon.

Platon says that, given the uncertainties of economic development, the over-dimen-sioned shipbuilding industry and a life span of the fleet built in the 1970s that is constantly being extended, the potential for the dynamics on the supply side of shipping are enormous.

"This environment generates a more unpredictable and more exciting market structure than perhaps ever before," the Olso-based shipbroker believes.

Given the uncertainty over markets and increased competitive nature of the industry, Norway's shipowners argue that the domestic tax regime is forcing them to resort to flags of convenience and is inhibiting renewal of the fleet. The shipowners that stay in Norway are

forced to seek foreign capital, causing the ownership structure of the shipping firms to change dramatically as the internationalisation process picks up momentum. If this development continues, Norway's maritime environment may be in danger of becoming a historical reference if ship-owners follow through on threats to relo-

of taxation regimes which do not under-

mine competitiveness.

Seven years ago, Norway's shipping industry experienced a major revival with the establishment of the Norwegian International Ship register (NIS) which worked as an explosive catalyst for cate elsewhere in the world in the pursuit attracting Norwegian ships back to a

man of Oslo shipbroker O-J Libaek & Partners: "It was the first positive signal ever for Norwegian shipping of acceptance by Norwegian society and politicians.

The primary reason for the establishment of NIS was to stop the flood of Norwegian owners to the flag-of-convenience According Mr Ole Jacob Libaek, chair- or "open registers" such as Bermuda and

savings on crew costs.

Just before NIS was established, the fleet sailing under the Norwegian flag had dwindled to around 9m deadweight tonnes (dwt). The NIS register peaked three years ago when it became the register of choice for 917 ships comprising 40.6m (dwt). By this year, the NIS fleet had, however, been reduced to 790 ships of 33.3m dwt.

Mr Liback believes that the success of NIS, in spite of uninspiring global market conditions, led to the 1992 tax reform, the timing of which could not have been worse because it coincided with a new

Under the previous tax regime, shipowners had up to eight years to reinvest profits. Almost overnight taxes for investors buying second-hand tonnage became payable "up front".

Needless to say, the second-hand market all but disappeared, shutting off an impor-tant source of risk capital needed by shipowners. Consequently, according to Mr Liback, only a doubling or tripling of ship values could rescue Norwegian shipping.

The market never improved to the extent that this was to happen, and the new tax law therefore led to a new depletion of the Norwegian fleet with sales abroad - mostly to the Greeks - becoming the order of the day.

The Norwegian Shipowhers Association (NSA) estimates domestic alapowners pood to raise between \$20hn and \$30hn over the next decade to maintain their 19 per cent share of the world fleet and to finance fleet renewal. By comparison, the current market value of the Norwegian owned fleet is about \$170n.

Mr Rolf Westfal-Larsen, a former NSA president, estimates Norwegian shipowners must earn at least 25 per cent more than their competitors in order to accumulate the capital needed to renew the fleet.

The average age of the Norwegian owned fleet is around 13 years - younger than the world average - but there is nevertheless the need for renewal.

'Norway's shipping industry is in a period of transition. Although a number of shipowners are optimistic about the future, a question nevertheless remains over where activities will be conducted in future. This is a result of Norway's corporate tax structure and the pressures of globalisation. The taxation issue probably would not have become so important an issue were it not for the need to renew the fleet," said Mr Rolf Saether, managing

director of the NSA. Mr Saether believes the "right" corpura-tion tax could lead to a new united of the industry. "What we need is the possibility what we need in the possibility without industry. What we need it the positions to reinvest profits in new transfer without being penalized by taxes. The special help the industry enormously and their change is needed urgently. Narway and per cent corporate tax is still far above that of our competitors," he argues.

The Winter Olympics may have opened a door for upmarket tourism

On the fast track from Lillehammer

appeared on television screens throughout by the year 2000 foreign tourists will contribute NKr23bn annually to the economy. This year Nortra expects income from tourism to expand by 10 per cent, and No wonder superlatives abound to forecasts that no fewer than 4.5m visitors will head for Norway, more than half of

them this summer, and up to 80 per cent of them purely for leisure. With tourism one of the country's fastest growing industries, many Norwegians fear that an influx of holidaymakers could harm the environment.But the foreign ministry's carefully targeted promotional campaign should calm anxiety that droves of shallow-pocketed travellers will descend on Norway's rugged mountains,

craggy cliffs and myriad fjords. According to a senior ministry official, the typical tourist visiting Norway is seeking a "special" holiday filled with culture, nature and culinary delights (the country's rich seafood tradition offers everything from arctic cod to salmon, as well as a wide range of whale dishes).

This tourist is at least 45 years old, travels without children and does not mind packing wellingtons and rain gear. tourism runs at an annual 6 to 7 per cent. He or she would not normally complain level executive and a culture enthusiast.

"This is exactly the group we are targeting," explained the ministry spokesman. "We have no plans to expand our marketing efforts to attract youth, the masses or others outside this group, because our product could be destroyed.

"We are not looking for the big num-bers, but the big spenders. It's more interesting for us to attract, say, a German executive who returns to Norway year after year." According to a survey undertaken

ahead of the games, the impact of the Lillehammer Olympics alone - the so-called "OL effect" - could increase tourism by an estimated 5 per cent this The foreign ministry began to devise its

strategy for capitalising interest in Norway long before the games ended, and it aims this year to undertake substantial media campaigns in the US, Germany, the UK and other European countries.

Last autumn, together with the Norwegian Soccer Association, it embarked on a promotional campaign that is colminating

wide cross-section of foreigners has gathered. Plans include a video-taped Norwegian current affairs programme for televi-

sion, business seminars, cultural events and presentations of Norwegian food. There is also a three-year agenda of high-profile cultural events in the US and Spain next year, and in Japan in 1997. These include a Norwegian film festival, in co-operation with the Museum of Modern Art in New York, and concerts by the Norwegian Chamber Orchestra and Trondheim Soloists.

orway not only sees an opportunity to boost tourism by exploiting the image conveyed to the world during the games, it also believes that business and industry can benefit from the global exposure of the country's involvement in other recent important events for example, its role as mediator in the historic peace agreement between Israel and the Palestine Liberation Organisa-

"There is a link between extensive

gian goods and services," said Mr Jan Egeland, state secretary of the foreign ministry, who was directly involved in the peace negotiations.

In the three years before the Winter Olympics, tourism rose by 30 per cent, helped by a surge in interest from Britain, Germany, Holland, and the US.

Yet, for all the efforts in marketing Not way abroad, there is work to be done at home to remove awkward idiosyncracies that can frustrate and disappoint visitors.Nortra admits that there is some way to go in improving the service-misdeds of Norwegians, to encourage them not to close shops during holidays and weekends and other peak traffic periods, although progress has been made in recent years.

Nortra disputes claims that Norwegian prices are on the whole far higher than elsewhere in Europe, particularly when it comes to accommodation. It urges visttors, for example, to negotiate prices for hotel rooms, particularly in Oslo where capacity is normally abundant.

But tourists may be shocked to find that the cost of a balf-litre of beer in a pub can

be more than NKr46 (25.76) and that for a modest dinner for two, including a bottle of table wine, they will have to pay at least NKr700. A large phase alone can cost up to NEr250.

Prices like these make extended stays for families absort probibitive; and many activities, such as concerts, craises and mountain hiking, are geared more towards adults then children.

One of the fastest growing segments of the domestic tourist industry is that of the recreational vehicle traveller. But Norway acknowledges it is little equipped to accommodate such vehicles; few RV parks exist, and there are few chemical and waste receptacies for dumping eithe-

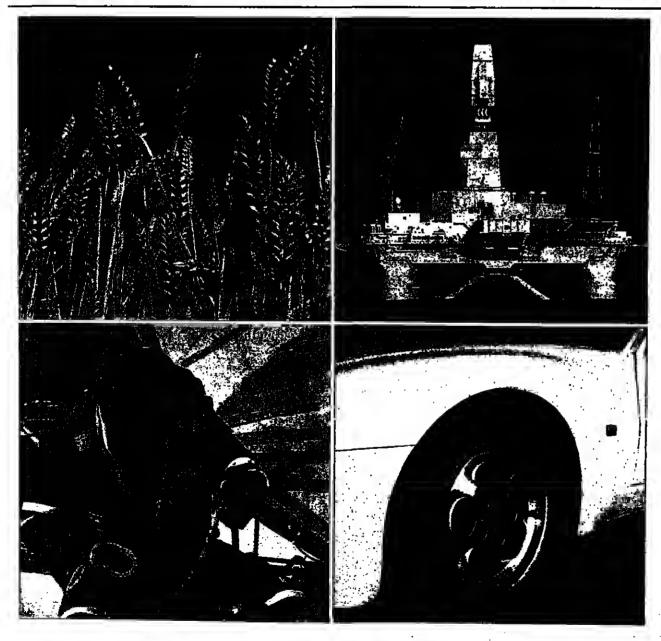

ent generated by RVs. Nortra forecasts that between 68,000 and 100,000 RVs will motor around the country this year, representing a 20 per cent increase over 1998. There are about \$70 inspected and classified camping sites, some of which offer book-up facilities for electricity, showers and tellets.

Camping fees range between \$10 to \$22 a night, while cabins can be rented for \$29 to \$90 a night.

Not unexpectedly, Norwegian travel brochures make little mention of RV facilities, but focus primarily on sightseeing by rail, boat, bus or car. But if you drive, expect to pay the highest petrol prices in Europe, running at about NEr7.50 a litre.
